I am attempting to enter the world of radio therefore I don't know the answer.
I think that the real problem is one of Self Esteem. Why open ones mouth only to provide the evidence of stupidity and remove all doubt?

2. Re: Jeep Grand Cherokee Loredo and RFI ???

>convenient grommet to passenger compartment..
>
>

I also have a friend with a Cherokee Sport...we grounded everything. The power cables for VHF and HF are coaxial cable with the center condustor as hot and the outer braid as ground. no noise at all.

I have another friend with an 1994 Grand Cherokee..no noise, but when he TX 2 meters on high power, the rear wiper activates. the antenna is in the rear of the vehicle. at this point no idea what to do to remedy

>Jerry F. W4UKU South Carolina

I use a Hoka Code3 unit and I can atest as to the coded RTTY sigs on
the air. MOST of the rtty stuff is coded (encrypted). About all that
is left are the Meteo stations and a very few News agencies. A lot of
stuff is French Military which uses ARQ E, E3, M2, M4 type emission.

Still it's fun to try anyway! :)

Happy New Year!

Steve

5. Transceivers in London

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-01 00:00:00 UTC
From: wired@genes.pl.my
Message-ID: <820518616.21865snx@genes.pl.my>

Hamsome (hamsome@aol.com) wrote:
: Does anybody have experience with the Yaseu 890at mod to allow transmit on
: all freqs? Does it work?
: thanks

Yes, it works fine and is very simple to do. It involves "soldering"
(shorting) a jumper and a few key presses. You can find the mod
at ftp://oak.oakland.edu/pub/hamradio/mods/yaesu

Good luck.

Message-ID: <2303062014.47418053@acd.org>
Source record: 232946

But mail order will save the sales tax.

Like everything else in Texas, the sales tax is king-sized! <g>
Somewhere between 8-9%, last I heard, so the savings would be substantial.

-Drew in Charlotte-
KF4DDM

Well here in Texas, not everything like taxes are as high as you might think. Sales tax is still in the 7 percent range. Car registration is cheaper than neighboring states, and I have yet to pay income tax in Texas. Most of the other readers of this can't say that, now can they? Things aren't quite as backward here as you might think. We ARE required to shoe our horses after all.....

8. Winter Park freqs?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-01 00:00:00 UTC
From: cmwang@thumper.cc.utexas.edu
Message-ID: <4c9eo8$eff@thumper.cc.utexas.edu>
Source record: 232947

Some friends and I will be going to Winter Park, Colorado in a few days, and I'd like to know which frequencies to use. I'll be taking a dual-band HT (2m/70cm) to the slopes. In the car I'll have an amplifier and an external antenna.

I have an Anli antenna (about 12" long) for the HT. Should I get a different one (Hot Rod or other), or a Tiger Tail? I'd like to try to work a repeater from the slopes. Any suggestions?

Thanks in advance!

Chris

The rig was developed by Trevor Baylis, a UK inventor from Eel Pie Island, Twickenham. Production of the BayGen receiver just started. I saw and tested the prototype. A very poor AM and FM receiver for DX - but it is primarily meant for third world countries. Sales in UK (Harrods) have just started.
Contact: ByGen Power Company, 89 St. Patrick Road, Johannesburg 2198, Re. South Africa.

Just in the spirit of interesting exotica, the Rad Lab pushed the lowly 6SN7 to as much as +100v on the grid in pulse circuits, yielding ~ 200 mA grid current and 600 mA plate current.

of course. you're right. silly, ignorant me! i completely overlooked the fact that (conveniently) AIDS also rids us of those nasty hemophiliacs, paramedics, physicians, dentists, blood-bank employees and rape victims (to name the most prominent groups infected by accident). of course you right-wing maggots probably have some twisted pseudo-religious explanation for why those people all deserve to die too. that must fit in there with "love the sinner and hate the sin" and "love thy neighbor as thyself".

how does a redneck who's ever had a blood transfusion reconcile his/her bigotry with the fact that the blood typing/crossmatching procedure which made transfusions possible was invented by a black doctor?

(who, incidentally, died of injuries when a whites-only hospital emergency room wouldn't take him)

so tell me--are brainless bigots like you morons the epitome of no-code licensees?

i hope not or else amateur radio is doomed.

of course, i'll probably get a ton of flamemail from people too stupid to recognize that "?" on the end of that sentence means it's a question, not a statement (the sentence immediately following IS a statement).

Jesus loves you. Everyone else thinks you're an asshole.

Amateur Radio Newsline Monthly Information Notice
==========

Last Revised: 12/27/95 |

Amateur Radio Newsline is a weekly audio service produced by Newsline,
a service of the Westlink Radio Network. Editorial comment, news
items and all other business should be directed to Bill Pasternak,
WA6ITF, Newsline's Producer and Editor-In-Chief.

E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO from
materials provided by Newsline. and is jointly distributed to online
services and bulletin board networks by Steve Coletti and Dale Cary.

All others are asked to not post Newsline to any BBS or network
without the permission of Steve Coletti. There have been distribution
problems with many of these networks recently and posting Newsline to
an echoed conference because you haven't seen it there doesn't mean it
hasn't already been seen elsewhere. Reposting causes wasted bandwidth
and additional telephone charges to be incoured by the sysops of these
volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio
version in it's entirety over nets or repeaters. The text version may
be used for packet distribution as long as it is sent in its entirety
and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or
digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet

retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Use your own personal account...I'm not stressing out and
I am paying for your access...That is one of the problems of
some people that work for the government...they think it
doesn't cost anyone anything..There is no problem for using that
account for the collecting and dissemination of useful information,
but the nonsense that we ridiculously amuse ourselves with on
rec.radio.amateur.misc. has no place on a government sponsored
server..I also have a similar account and do use it properly, but I
pay for and use my own personal account when I play "drive-by

internet shootings" here. And to answer your question; yes.. :o>

Happy New Year,

Steve, WA2NHZ..

Try and smarten up a little bit before you do draw fire..

Steve, WA2NHZ

I have a 1995 Jeep Cherokee Sport with straight six..absolutely no
ignition noise or any other type of electrical problems on HF or
VHF 144/220...on mine anyway..I ran shielded power cables through
convenient grommet to passenger compartment..

I have heard of numerous problems with the Ford Explorer on here with
the internal fuel pump..

The following is a QST

Police in Moraine, Ohio arrest a CB operator who they say was a
nuisance to his neighbors. But did the police overstep their
authority by going into federal territory? Local hams are saying yes
and they fear that they will be next. Also, a Christmas gift from
mother nature. Find out what it was on an extended year end Newsline
report number 959 coming your way right now!

(*****
OHIO CBer JAILED FOR TVI

An Ohio CB operator has been arrested for causing TVI to a neighbor. Local police say that they will do the same to anyone who causes interference to consumer electronic equipment. This includes ham radio operators.
Saturday night December 9th a CBer in Moraine, OH got a visit from the local police. Steve Holbrooks radio was apparently causing interference to his upstairs neighbors tv set. Holbrook was advised of the problem, which according to upstairs neighbors, Michael Price and Tina Hustach, had been going on for at least two months. For whatever reason, later that night Holbrook got on the air again and while talking referred to his neighbors in uncomplimentary and socially unacceptable terms. What he didn't know was that Michael and Tina were recording what came over their tv and they decided enough was enough. Police were called again and Steve Holbrook was arrested on a charge of interfering with a public service. A third degree felony for which there was no bond.
On Monday the 11th Holbrook was released when the county prosecutor decided not to press charges. However the city of Moraine may decide to press charges of their own and Mr. Holbrook is scheduled to appear in Moraine Mayors Court on December 21st. W8ILC is the interference chairman of the Dayton Amateur Radio Association and has been contacted by Montgomery County Sheriff Gary Haines about the situation. Ron was asked to provide the sheriff with information concerning FCC rules about interference and advice on what would and would not be appropriate in a future situation.
"I did ask the Moraine City Police Department at the time I called them, I said if this would have been an amateur radio operator causing the interference, would you have done the same thing? And their answer was yes." W8ILC
In a related item, the DIAL Amateur Radio Club in Middletown is following this case and expressed concern about its affect on the amateur community. According to information given to this reporter, someone in the club contacted the city law director and was told that in a case of interference with consumer products it is the responsibility of the individual causing the interference to supply the needed filters to rectify the problem. Efforts among the local amateurs are under way to determine what can be done to educate public officials about how to handle TVI complaints in the future.
Police have confirmed that they have Price's tape recording but refuse to reveal what was on it. They say that Moraine prosecutors would review the charges against Holbrook and decide how to proceed.

(*****
ARRL ASKS FOR LESS SPREAD SPECTRUM RULES

The ARRL has asked the Federal Communications Commission to relax its spread-spectrum regulations to give Amateur Radio more opportunity to contribute to spread-spectrum development. The League's request seeks relaxed restrictions on spreading sequences and greater

flexibility in the use of spreading modulation. The petition proposes that the FCC permit brief test spread-spectrum transmissions and allow international spread-spectrum communications between amateurs in the U.S. and those in countries that permit their hams to use spread-spectrum techniques. The current rules allow only domestic communication. The petition also asks for automatic power- control provisions to insure use of minimum necessary power to conduct spread-spectrum communication and limit the potential for interference to narrowband modes. The petition does not ask for any changes in frequency restrictions on Spread Spectrum emissions, the 100 watt power limit or logging and identification requirements.
In urging the FCC to adopt the changes, the League's petition calls the proposals the minimum necessary changes in order to foster Spread Spectrum experimentation in the Amateur Service.

(*****
2300 MHZ UNDER SIEGE

2300 MHZ appears to be the latest band under siege. An October report by the National Telecommunications and Information Administration entitled Land Mobile Spectrum Planning Options suggests a new use for the band 2300-2310 MHZ. The report says that the band has potential for new, non-Federal radiolocation, fixed and mobile communication technologies. The study also notes that constraints are necessary for the protection of NASA's Deep Space Network and Planetary Radar operations in an adjacent band. A table in the report describes a possible future use of the band as Wide Area Land Mobile. The 2300 to 2310 MHZ band is expected to be the subject of an FCC allocation proceeding as a follow-on to ET Docket 94-32. Docket 94-32 dealt with 2390 to 2400 and 2402 to 2417 MHZ allocations. 2300 to 2310 MHZ is currently allocated to the Amateur Service on a secondary basis.

(*****
CHRISTMAS 6 METER OPENING

Mother nature gave hams a real treat on Christmas day. The 6 meter band, normally quiet at this time of year went wild with DX. While reports from overseas are still a bit sketchy, at least one U.K. station was heard and worked in the central United States. There are also reports of JA stations being heard in the Pacific northwest but no confirmed QSO's.
Perhaps the most astounding report comes from a station in South Carolina. Ken Rameriz, KP4XS/4 reports over the VHF reflector that he heard at least eighty stations from across the United States and Mexico and had QSO's with many. This included stations as far away as Colorado, Oregon and California.
Another exciting QSO was reported by Dale Parfitt, WA2YPY who contacted Arizona from Central Florida while Bill Hudson, WA0KBZ in Missouri had numerous contacts into New England and Florida.
And heres the kicker. While the majority of these QSO's took place

on single sideband at the low end of the band, several good DX contacts also took place on AM -- on the old AM calling frequency of 50.400 MHz by hams claiming to have used 1950's vintage Gonset Communicators, Clegg 99ers and other older gear! And almost everyone is commenting that this is perhaps the best 6 meter opening in years. Some old time 6 meter enthusiasts say that Christmas Day 1995 sounded like any day at the height of 6 meter DX back in July of 1959!

(*****
XE2HWB INVOLVED IN ACCIDENT

Joe Lynch, N6CL and Jack Henry N6XQ report via the VHF reflector that well known Baja California operator, XE2HWB, has been involved in an auto accident. According to news reports, Bernardo's car was hit by a large stone forcing it off the road. XE2HWB suffered a fractured skull and underwent three hours of surgery. He will be in the hospital for at least another two weeks and is expected to fully recover. Get well wishes can be sent to his Callbook address.

(*****
WARNING PLAN DERAILED

The best laid plans of mice and men can sometimes go wrong because of bureaucracy. This holds true even in cases where it might involve saving lives.
A plan to warn north Alabama residents about approaching severe weather may have run into a snag. In Huntsville, Alabama Outdoor Advertising, television station WHNT-TV and Compass Bank announced a project to warn motorists when bad weather threatens. Their plan calls for equipping as many as 100 billboards with lights that would flash when severe weather threatens. Huntsville is all too familiar with severe weather, back in 1989, a tornado hit the city, killing 22 people, many died in their cars. But Hulan Smith with the City's Inspections Division says the warning plan may be illegal. That's because Huntsville has a city ordinance prohibiting distracting road signs. Smith says flashing lights would violate the law.
Many Alabama Amateurs are involved in severe weather spotting nets. They literally risk life and limb to help warn their neighbors of tornadoes and other storms. These hams cannot understand why the bureaucrats in Huntsville would invoke a rule that in this case could cause their community harm.

(*****
APRtrak FOR SPARTAN

Bob Bruninga, WB4APR suggests that if you are going to be using his APRtrak program for the upcoming SPARTAN launch, be sure you get version 0.5. Bob says that the first release, version 0.4 has a flaw is that keeps APRtrak stuck in Eastern Daylight Time Zone. It can be made to work by forcing your clock to EDT time zone, but with other improvements in the latest release, he would encourage you to get 0.5. Bob says that you can tell which version you have on the start-up

screen and on the F1-Help screen. Version 0.4 will be dated in October, and version 0.5 will be dated in November. WB4APR adds that before the January 11th Spartan launch date that he will put out some helpful hints on the version 0.5 operation.

(*****
NEW BAND! NEW STATION! 1660 KHZ.

America's first new radio station on the new expanded AM broadcast band is now on the air! N8IYV reports via packet that it was 20 over S9 in Northeastern Ohio at 00:53 UTC on December 19th. Tom says that the station format was easy listening music with no commercials at this time. Its callsign is WJDM and its located in Elizabeth, New Jersey.

IBM & REUTER ON-LINE

From the world of the internet. International Business Machines Corporation has announced that it will introduce an Internet-based online news service using material provided by the Reuter News Agency.

(*****
SEASONS GREETINGS FROM DP0MIR

German Astronaut Thomas Reiter, DF4TR, who is aboard the Russian MIR space station until February is sending seasons greetings for Christmas and New Year to all HAMs and SWLs worldwide. Reiter is using the digital voice recorder constructed by Thomas Kieselbach, DL2MDE to send out his message on 145.800 MHZ. As time permits Reiter will be live on the air as DP0MIR.

(*****
DX - SCARBOROUGH REEF

Lots of DX news this week. First, the ARRL's Membership Services Committee has voted 5 to 2 to recommend the addition of Scarborough Reef to the ARRL DXCC Countries List. Earlier this year, the DX Advisory Committee and the Awards Committee had come to opposite conclusions regarding the eligibility of Scarborough Reef for separate DXCC status.
Under new procedures adopted by the ARRL Board last July, when committees do not agree the question is referred to the Membership Services Committee for review and final recommendation to the full Board. Now that the MSC has said yes, their recommendation that Scarborough Reef be added to the DXCC List will be considered by the Board of Directors at its upcoming January meeting.

(*****
DX - PRATUS ISLAND

And the ARRL DX Advisory Committee and the Awards Committee have both voted to add Pratas Island, BV9P, to the DXCC roster. This, for

contacts made January 1st, 1994 and later.
Because of some irregularities the ARRL says that it will be necessary for anyone who has a picture type QSL card from the January or March 1994 operations to obtain a replacement. The picture cards will not -- we repeat -- will not be accepted for DXCC credit.
QSL cards for Pratas will be welcome by the DXCC Desk starting on April 1st. Cards received before that date will be returned without action.
Pratas Island is located in the South China Sea and is administered by Taiwan.

(*****
UTAH CELEBRATION

Hams around the world are invited to help the state of Utah in its Centennial Anniversary. To commemorate the event, the Utah Amateur Radio Club will be operating W7SP on Saturday January 6th. Look for the station on 14.196 MHZ from 16:00 to 23:00 UTC and QSL with an SASE to the:

Utah Amateur Radio Club
2671 Dolphin Way
Salt Lake City, Utah
84121

(*****
DUBLIN REPEATER BACK ON

And finally, a Dublin Ireland repeater is back on the air after a hiatus of several months due to jamming. The Dublin Repeater Group says that its Two Meter voice repeater came back on the air on Friday, December 1st. The Repeater was ordered off following a period of serious abuse and misuse which contravened the repeaters license to operate.
A letter outlining the current situation being sent to all of its users. Unlike the United States FCC which seemingly does little to solve repeater interference problems, many other administrations simply pull ham radio licenses when a rules violation takes place.

(*****

And for this week, and for this year, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and TNC/PACKET DOOR IS UP & RUNNING !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,800 FILES IN 115 FILE AREA'S..so far !
GOOD NEWS THE LANDLINE TO HAM PACKET DOOR IS UP AND RUNNING*******
ARE YOU ON THE HAM USERS LIST ???????

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.

Stephan,

This news group is carried on a Lab news server I think we are intended to use that server. As you should know my access actually costs nothing so the issue is moot. I could use my personal account but this is much more convenient when I have to work after hours.

Your attempt to attack a persons job is a new low and completely vilifies my previous opinions. Do you always try and bully people who don't agree with you? I checked my e-mail and no hate mail so far perhaps no one really cares about all this. I thought these groups were for debate and the exchange of ideas if that is in error please forgive me I didn't realize I was on 75 meters.

An extremely personal attack like this does serve to weaken the position of the attacker as it makes it obvious there is no rational defense for their position. Congratulations on learning how to use finger by the way.

Try and lighten up a little bit you're going to stress out.

39. Scheduler With Output Function

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-01 00:00:00 UTC
From: jrsmith@nitco.com
Message-ID: <4c7r9v$r2v@aegis.nitco.com>
Source record: 233071

I would like to know if the Creative Labs Soundblaster card, along with Scheduler, can be equipped with an output function. You know, to turn something on and off with.

If not, do you know where I can obtain such a card and software?

Thanks

Jim

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily

mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and

years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource

Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
~~~~~~

that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters

Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

Jack G.F. Hill W4PPT

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ.

The new mailing list addresses are now

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the

number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)

Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is
access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called

elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of

VEC receipt of the examination paperwork. New amateurs may determine
their call signs by calling the FCC's toll free consumer assistance
line: +1 800 322-1117.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

- ------->> http://promet12.cineca.it/htdx/index.html <<---------

NEWS, INFO, RUMOURS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-Mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and

search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series

appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

- D -

Matthew A. (Matt) D Alessio KC6VIM

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

rfrench@cs.stanford.edu

http://hawg.stanford.edu/~rfrench/

The Stanford Amateur Radio Club, W6YX, will be taking over the
Ham-Univ Mailing List for College and University Amateur Radio Clubs,
effective immediately.

The new address will be: ham-univ@w6yx.stanford.edu

The old address at the New Jersey Institute of Technology will
continue to work for the time-being as a forwarder to the new address.

To subscribe or unsubscribe, send mail to:

ham-univ-request@w6yx.stanford.edu

with the body saying "subscribe" or "unsubscribe".

Current subscribers have been automatically added to the new mailing
list.

Please let ham-univ-owner@w6yx.stanford.edu know if there are any
problems.

Stanford Amateur Radio Club (W6YX) WWW Page is at:

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve6tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.).

MAINTAINER OF THE INTERNET DX MAILING LIST

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I also maintain an amateur radio related WWW page at:

http://ve7tcp.ampr.org/

It focuses primarily on Contesting, DXing, and technical matters.

David Newkirk WJ1Z

webmaster@arrl.org

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things since 1966 when I first went on the air. :-) Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol

* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available

locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP
QUIT

ADMITTED TO PRACTICE LAW IN CALIFORNIA, MASSACHUSETTS, AND NEW YORK.

ARRL VOLUNTEER COUNSEL

I would be happy to be an Elmer (have been doing it by default) in the area of older HF gear, especially QRP operation with Ten Tec Argonauts (and Power Mites, etc.). Also have experience with other 10-20 year-old economy HF rigs, particularly the Kenwood TS-520.

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Charles R. (Chip) Veres WB4OQN

+1 305 989-4329 (don't be put off by the answering machine)

Miami, FL

I have been active in amateur and commercial radio for the last 26 years I have worked on AM, FM, CW, and SSB sets from longwave through 12 GHz. I have also built TV stations for UHF and the 2.5 GHz ITFS band.

I am particularly interested in finding others to learn from my experiences. I am available by net or in person.

Frank E. van Vliet PA3FAQ

vanvliet@dutette.et.tudelft.nl

I am willing to answer questions about:

* FILTERS
+ integrated
+ distributed
+ lumped
+ active
+ etc.

* MICROWAVES
+ designing power amplifiers
+ low noise amplifiers
+ mixers
+ etc.

(E-Mail questions are preferred)

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

Bob Wier

-- Round Up the Usual Disclaimers! --
Bob Wier, CS Dept., East Texas State University
wier@bobcat.etsu.edu - keeper of the
Motorola MC68HC11, Photo-3D, SD3D,
Icom Radio and Overland Trails mailing lists

The HC11 mailing list also encompasses discussion about the HC16 and 683XX series of micro-controllers.

The ICOM list is for not only Ham, but SWL, Scanning, and Global Positioning System (GPS) equipment as well.

Subscription requests for any of these can be sent to

listserv@bobcat.etsu.edu

with the body of the message as:

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

Drew sent me a message where he wished all gays would get AIDS
and die.

Now will you hams give Drew the response he deserves?

Most likely you will do what hams do better than any other group (except
the Germans of Nazi Germany) and LOOK THE OTHER WAY.

>they were not out in left field.
>
>--
>
Look cut me some slack on this one. I wasn't talking about the Vce. I
THOUGHT that was obvious. For the record: Vce is whatever Vce sat is
for the device 0.3; 0.6; hell maybe it's a darlington and Vcesat is
1.2v.....

What i was talking about was where the emitter is attached. The guy
asking where the emitter was attached was off base base a bit. I was
merely pointing out that where the emitter was attached was almost
irrelevant because the device was defined as saturated....

allow me to rephrase my comment a bit:

THE EMITTER might be connected to less than 10 volts if the
transistor is a npn. If it's a pnp, THE EMITTER might be connected to
more than 10 volts.

My point is that it doesn't matter (much) if by definition the
transistor is saturated.

gees...

It's a choice made based on cost and availability of software.
Performance is secondary. It's pretty hard to take the bug laden hogs
cranked out by MS as superior. They are garbage, but when you can copy
it for free from work... well...

52. [Survey] RFI in Suburus?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-01 00:00:00 UTC
From: wy1z@kalypso.cybercom.net
Message-ID: <4c8tdq$6al@kalypso.cybercom.net>
Source record: 233084

I've opted to abandon the SUV market in favor of the car market.

Several people on the 4x4 newsgroup recommend Suburus for my needs.

Now, if I turn my attention to the Suburu market, what is your experience
with RFI in Suburu cars? The Impreza looks good, though I'm not holding
myself to that car.

Thanks for your feedback.

>| | N3SQE@Nxxxx.FNxxxx.PA.USA.NA - Packet |
I think that NAM braodcasts vertical, but it does not make much
difference unless you withen ground wave range. Here in central Ky, the
polarization is constantly shifting around. Vertical, rotating around
to near horizoantal then back. I normally use my 10mtr 1/4 wave ground
plane to receive them. I use an R2000 with about 15' of coax to the
antenna.
Several years ago I built a real small loop to check out the polarization
of WWV at 5,10 and 15. Out of general interest I checked out several other
HF sources. They all have constant polarization shift.
Yea, I know that a 10mtr antenna isn't ideal, but it works. Several years
ago, a freind told me he was using his radio shack discknoe as a SW antenna.
I told him he was nut, and checked it out. I still don't beleive it, but
my diskcone works about 3 s-units worse than my former longwire(it and the
tree supporting it, fell during last years ice storm). I use the 10mtr
for most of my SWing but when I need two receivers,(the 2nd is a Panasonic
RF2200) I use the Diskcone for with R2000 and the 10mtr with the RF2200.
It works pretty darn good.

Post this question on the APRS sig by addressing it to
"aprssig@tapr.org" and see what answers you get. But first send it a
"subscribe" text to same address so that you can see the responses.

60. Looking for Call Sign Map

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-02 00:00:00 UTC
From: amn1@cornell.edu
Message-ID: <amn1-0201961333060001@132.236.42.179>
Source record: 232892

Does anyone have a gif (jpg,dxf,tif) of the map of the US showing how the FCC has split it into the different numerical call sign prefixes, or possibily where I might find one?? Sorry I don't remember the proper name of it.

I've already scanned the arrl infoserver and downloaded all the HAM gifs from oak.oakland, still nothing.

I really need this in an autocad drawing (dxf) format, but I have the conversion programs if needed to convert from gif,tif,jpg, etc.

I suppose that I could digitize the one out of the ARRL General class manual, or scan it, if need be.

Friends,

A couple of weeks ago I offered a Shortwave Broadcast Radio Station DEMO database programm which
unfortunately only accepted up to 100 records. If you would like a simular pprogram for Broadcast Radio Stations on Shortwave down to longwave and accepts an unlimited number of records,
please respond to this message. The program presently has 4,000 plus records. It will be sent via EMAIL.

Please include you name and mailing address as the users must be regestered. This information
will be kept confidential..

Chuck

Yes, I have been inside the 890 a few times. Only trouble is that you
have to watch that you don't pinch wires when you reasemble the radio.
If you worked in the Yaesu factory with somebody telling you the
secrets, and have 4 hands that would help.

At the risk of getting flamed for self-publicity, I've added a MOCK Radio Amateurs' Exam to my pages to lighten them up a bit.

Anyone who's had to suffer the awfulness of our UK City and Guilds - a nightmare of formality and silly legislation - will perhaps get a laugh out of this send-up.

But will you pass it ????? I dare you to find out!

Link thro' my homepage:

http://www.innotts.co.uk/~asperges/

A sincere thanks to all from this newsgroup who have recently mailed me. Happy New Year!

ARRL Bulletin 1 ARLB001
From ARRL Headquarters
Newington CT January 2, 1996
To all radio amateurs

SB QST ARL ARLB001
ARLB001 FCC remains closed

License Applications Stalled as Budget Impasse Continues

While budget talks continue between congressional leaders and the
White House, the FCC remains shut down for lack of funding, and no
applications for new licenses will be processed or granted until the
FCC reopens.

Once the budget issues are resolved and the FCC reopens, it could be
another two or three days before processing is completely restarted.

The ARRL encourages applicants to be patient and to wait at least
until the third business day after the FCC reopens before calling
about pending applications.

Keep in mind that the European allocation is 144-146 MHz.
Sending or even receiving above 146 MHz is a major offense.

You should also take the band plans into account. Stay out below
144.450 (SSB/CW), between 144.825 and 145.0 (beacons), and above
145.800 (satellite). FM calling frequency is 145.500; repeaters
can be found between 145.600 and 145.7875 in 12.5 kHz steps.
The input is 600 MHz lower (obvious!) and you may need a 1750 pilot tone
to access a repeater.

Do do know you need a reciprocal license if you want to operate?
(Can one of the English folks please publish the address of the DTI?)

Do you have sources for those two statistics? Both, especially the
latter, seem awfully high.

Also keep in mind that one of the two classifications you listed
above involves a lifestyle choice (engaging in high-risk behaviours),
while the other involves a life/death choice (receiving a blood
transfusion).

FOR SALE: ALINCO 580/582 "AA" DRY CELL CASE

I have for sale the EDH-6 AA dry cell case to fit the Alinco DJ 580/582 line.
It holds 6 AA alkaline batteries, or could be manipulated to create a battery
elimanator for the radio. Reason for selling: sold the radio long ago, and
forgot to include this little accessory. Cost: **$10**, includes shipping to
48 states. Prepay required, USPS MO ONLY. I'll pay shipping on this item.

If interested: Email: Cobra295@aol.com
Call: 609-275-2965
Page: 609-895-7672 (Expect a collect call back for a
$10 item. :))

Do not leave public replies, I don't always catch all the messages in this newsgroup.

SM410.ZIP seemed to have problem with my 486DLC-40 computer.
Sometimes the dashes were a little short and sounded like dots.

MA51N.ZIP, Morse Academy, did not have this problem.

First off, let me say (as a research professional in the hematology [study of blood] field) that charles1's "statistics" are wildly exaggerated.

Second, you totally missed my point...but I guess irony and sarcasm don't always play well. What I was trying to put across was how foolish this whole Burt/Drew/whatever chickenshit has become.

Sincere apologies to anyone who took my post at face value rather than as an exercise in irony and sarcasm. I thought that was evident from the first sentence.

Now, can we all ignore Burt, Drew and their ilk and get back to radios?

Well...since you asked, call is OH2BYS, and he is operating portable EA8. So,
the full call, assuming I copied it correctly, is: EA8/OH2BYS/P

QSL via CBA or Home Call. but make sure you send him a card and tell him that you
miscopied his callsign but want a card anyway...in the old days, you couldnt get a
card unless you copied correctly (or sent greenstamps).

Just my opinion. Good DX and Happy New Year.

dit dit

Joe

Whatever happened to the Amateur's Code
One The Amateur is Gentlemanly
Two The Amateur is Loyal
Three The Amateur is Progressive
Four The Amateur is Friendly
Five The Amateur is Balanced
Six The Amateur is Patriotic

Reading this thread it sounds more like the War Zone on Forty I used
to hear when I lived in LA and ir saddens me somewhat to see what my
hobby has sank too. Lighten up Chaps and enjoy 73 Alan G3kfn

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station
location becomes available.

I would like to extend the table to include the best five QSOs for each
band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

Hi,

I'm interesting in purchasing either the Yaesu FT-530 or Icom IC-W21AT dual-band HTs. Both manufacturers are having specials on these models and they can be had for about $380 new. Can anyone recommened either of these 2 radios or are they about the same? Apparently the IC-W21AT is a close-out so I can't find info on this model in any of the magazines.

I'm also interested in purchasing a used dual-band HT (2m, 70cm) or used 2m HT so if you have one in excellent condition that you'd like to sell please send me e-mail.

Thanks,
-David

98. Re: 147.435 Repeaters in CA

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xLNIePI.sanderman@delphi.com>
Source record: 232930

The call sign of the LA 147.435 repeater is AA6TK. Known as the "Animal Farm" repeater, it serves a wide area of the Pacific coast from San Diego to Santa Barbara. The machine used to be located on Mt. Wilson but no longer perched there. Roy Tucker, N6TK, is the chief control operator for the machine which bears his wife's call sign.
Hope that is of some help to you.

99. "This Week in Amateur Radio" to Return to Satellite Air

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xLGkeDH.sanderman@delphi.com>
Source record: 232931

An agreement has been reached between the "Tech Talk Network"
and operators of the Telesat Canada Anik E2 commercial
communications satellite. All communications hobby programming of
TTN including "This Week in Amateur Radio", will return to the air
in January. The agreement awaits formal signing by the uplink
carrier and SKYVISION, which underwrites the network uplink costs.
"This Week in Amateur Radio" is a weekly on-the-air bulletin
service in audio newsmagazine format. The service carries ARRL and
RAC bulletins, contest and convention information, propagation
forecast summaries, RAIN, the Radio Amateur Information Network,
the Amateur Radio Newsline, and other features on over 100 nets and
repeaters throughout North America.
Once the agreement is signed, telephone lines will be secured
and installation of the network audio uplink equipment can proceed.
The network will utilize transponder 18, (9B vertical), at 5.8 MHz
wideband analog audio (4.06 GHz). Anik E2 is located at 107.3
degrees west longitude in equatorial geosynchronous orbit and
provides excellent coverage of North America with spot beams aimed
at Alaska and Hawaii. But the best part is that Anik E2 is
expected to remain operational into the 21st century and provide a
more permanent home for the network.
"This Week in Amateur Radio" is produced by Community Video
Associates, Inc., a New York State not-for-profit corporation based
in Albany, NY. Production and transmission expenses are
underwritten by donations from repeater operators, amateur radio
clubs, and individuals. Further information is available from
George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or
Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@
delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA
via amateur packet.
Look for "This Week in Amateur Radio" to return to the air
Saturdays at 8:00 PM (EST) early in 1996. Affiliates are asked to
please acknowledge receipt of this bulletin.

102. Indoor Antenna Help

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-02 00:00:00 UTC
From: jhanson@yar.cs.wisc.edu
Message-ID: <4cab0a$167a@news.doit.wisc.edu>
Source record: 232969
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have an Icom IC-730 with no tuner. I am trying to hook up some sort of antenna system to work in my apartment bedroom. I have purchased 100 ft of speaker wire, figuring I would be able to stretch it out and pick up something, but I can't get a thing! I can't even hear WWV for crying out loud. :)

What should I do? The room is very small so I don't think I will be able to make much of a configuration on the ceiling. Am I doing something wrong with the wire? Would a tuner help? Can anyone direct me to an easy/small indoor antenna design on the web, or elsewhere?

Thanks in advance!

State sales tax rate is 6.25%, with an additional 1-2% locally. I was in the Dallas area last year, and the rate was 8.25%! But I know what you're saying about the lack of state income tax. I once lived in Florida (and will hopefully be heading back there soon) No state income tax there, either. The tourists pay it all :-)

>Will I run into any problems if I brought two HTs from the US into
>Britain during a holiday?

I may be wrong, but I think that you may have a hard time accessing repeaters in the UK and the rest of Europe. Most (perhaps all) repeaters requite a 1750Hz tone burst to access. Look at the manual that came with your HT, and you may see different specifications for US, European, and general market radios. European radios have a tone burst function. Most US radios have PL selection in place of tone burst.

If you can find something to simulate a 1750Hz tone, you'll be ok. It's just an initial burst, not a continuous tone like PL is. Just enough to open the squelch until you stop transmitting...

I own a 94 Grand Cherokee and have used it with 2m and 440 equiptment.
The only thing I have noticed is that a HT used in the Jeep can put a
small Hum in the FM radio.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 JANUARY AND FORECAST FOR 03 JANUARY - 05 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 01 Jan
Daily Proton Fluence >1 MeV: 8.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 9.7E+06 (normal)
X-ray background: A1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Jan 04 Jan 05 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Jan: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 01 Jan
Learmonth 9 2122 2333
Fredericksburg 5 5
Planetary 5 3

Observed Kp for 01 Jan: 0011 1221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Jan 10 unsettled
04 Jan 5 quiet to unsettled
05 Jan 5 quiet to unsettled
COMMENT: Field was quiet until around 15UT, afterwhich the field
looked mildy disturbed and activity increased to unsettled levels.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
02 Jan Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Jan Normal Normal Fair
04 Jan Normal Normal Normal
05 Jan Normal Normal Normal
COMMENT: HF conditions at high latitudes may be degraded for
today.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
02 Jan 19

Observed Australian Regional MUFs:
Townsville: enhanced 30% 06-10UT, depressed 30% 12-15UT near
predicted monthly values at other times.
Sydney: enhanced 15-20% most of UT day.
Hobart: near predicted monthly values.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
03 Jan 15 near predicted monthly values
04 Jan 15 near predicted monthly values
05 Jan 15 near predicted monthly values

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, 94004531@postoffice.csu.edu.au
v1.9, 21 November 1995

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field. This document also
provides some detailed information on how to configure and install
some of the more important pieces of software.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Netrom configuration details.
mkiss - multidrop KISS support.
DARC Web site.
```

Corrections:
Updated AX.25 section.
Updated Microsat section.
Updated sattrack.
Update JNOS section.
Updated Packettwin driver.
Updated RSPF daemon.
Other fixes as submitted by contributors - thanks.

2. Where to obtain new versions of this document.

This list will be periodically posted to the comp.os.linux.announce newsgroup, and to the HAMS list on niksula.hut.fi.

It is also available from the following World Wide Web sites:

The Linux Documentation Project runs a Web Server and this list appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer
message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the Moon are also provided. Future releases will provide more options. SatTrack requires about 5 MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used
without special permission for non-profit, non-commercial use.
For commercial applications a license from the author is
required.

Contributed by:
Manfred Bester, DL5KR

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

o You may not charge ANYONE for the program itself.

o You may not distribute modified versions of the program.

o If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. Kernel Based AX.25 networking.

Author
Jonathon Naylor, G4KLX, jsn@cs.nott.ac.uk and Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
Software that provides native AX.25 support in the Linux Kernel.

Status
ALPHA. Still under development. In a working state.

System requirements
Linux kernel 1.3.*, or kernel 1.2.* plus patches.

Detail
Jonathon's software provides the programmer with a berkeley socket based interface to the AX.25 protocol. AX.25 sockets can opened for either connected, or connectionless modes of operation. Support to allow tcp/ip over AX.25 is provided. Jonathon has recently added NetRom support and provided fixes and other enhancements to the code. The software comes in two parts, a kernel patch, and the configuration tools and user programs. The user programs included in the most recent distribution are:

axassociate
to associate a particular AX.25 callsign with a userid on

your system.

axattach
to convert a serial device into a KISS device.

axl
an AX.25 listener designed to start a PMS when it receives an
incoming connection. The PMS is still very new.

axsetcall
to change the callsign of a port.

beacon
generated beacon messages every 30 minutes.

call
A linemode AX.25 connection program. Call allows you to make
connections to other AX.25 nodes. It provides file transmit
and receive capabilities, and newer versions allow YAPP
binary file transfers.

listen
a packet trace tool for radio links.

mheard
a program to display callsign heard on radio ports.

netromd
a daemon program to generate netrom routing broadcasts.

noderest
a program to restore netrom routing information from a file.

nodesave
a program to save netrom routing information to a file.

nrparms
a program to configure a netrom interface.

rip98d
an implementation of the rip98 routing protocol.

Where and How to obtain it.
There are a number of different versions of the software. You
must choose the one that suits your version of Linux kernel.
Software for kernel versions older than 1.3.* is available from:
ftp.linux.org.uk <ftp://ftp.linux.org.uk/pub/linux/Radio/>

More detail on where and how to obtain the software is provided
in the AX.25 section of the `Installation, Configuration, Hints
and Tricks' chapter below.

Licensing/Copyright
Most of the software is covered by the GNU Public License, some
of the software is Copyright by the Regents of University

California Berkeley.

5.2. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.3. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.4. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either
NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to
establish a mail and news gateway between conventional tcp/ip
networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI,
root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25
version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl

and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

o It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

o The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

o An interface to call your external programs (even dialog programs).

o clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

o Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other

processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

o The following is the only application program which can be run
on the console:
loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

o A console monitor to watch ongoing activities

o Speed optimization

o An internal clx protocol

o An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

o 00Index

o clx_200.tgz

o install.clx

o README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. TNT.

Author
Mark Wahl, DL4YBG, DL4YBG @ DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A Hostmode terminal program for TNC's that support the WA8DED hostmode protocol.

Status
Version 0.8 is reportedly stable.

System requirements
TNC supporting WA8DED hostmode protocol, serial line.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing

`make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

Where and How to obtain it.
The software is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. This site is mirrored at a number of places so you will probably find it at other places as well.

Licensing/Copyright
GNU Public License. Freely redistributable, no warranty.

Contributed by:
Steffen Weinreich, DL5ZBG.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.
Description

A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring
of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very
stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.12. AX.25 digipeater for Linux

Name
axdigi

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Allows Linux to digipeat across different ax.25 ports

Status
Beta release

System requirements
Requires Alan Cox AX.25 kernel support

Detail.
Allows frames to come in one port and out another using normal
ax.25 digipeater methods. Changes the digipeater callsign to
the correct one for the correct return port.

Where and How to obtain it.
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/axdigi.tgz>
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/axdigi.tgz>

Licensing/Copyright etc.
GNU GPL

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.13. Gracilis PacketTwin kernel driver

Name
Gracilis PacketTwin kernel driver

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Device driver for Gracilis PackeTwin cards.

Status
Alpha - needs testing and bug reports.

System requirements.
Gracilis PackeTwin card, Linux AX.25 kernel software.

Detail.
Provides kernel based driver support for the Gracilis PackeTwin
card using the kernel AX.25 code.

Where and How to obtain it.
The current version can be obtained from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/pt-driver-0.04.tgz>

Licensing/Copyright etc.
GNU GPL.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.14. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from the author.

Licensing/Copyright
Will be covered by the GPL when formally released.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.15. Z8530 SCC driver.

Name
generic Z8530 SCC device driver.

Author
Joerg Reuter, <DL1BKE@melaten.ihf.rwth-aachen.de>

Description
A device driver to allow you to use a range of 8530 based SCC
cards under Linux.

Status
stable

System requirements.
a modern Linux kernel

Detail
The Zilog Z8530 SCC provides Synchronous/Asynchronous, HDLC,
NRZI encoding and other capabilities. There are a number of
peripheral cards that use the Z850 as the basis of their design.
The driver is generic enough to be pushed into service for just
about any sort of 8530 card. The README file that comes with the
package provides detail on installation and configuration.

Where and How to obtain it:
The driver can be obtained from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/z8530drv-1.8.dl1bke.tar.gz>
for kernel versions older than 1.3.*. Kernel version 1.3.*
supports the driver in the standard distribution.

Licensing/Copyright
GNU Public License.

5.16. Multidrop kiss program.

Name
mkiss

Author
Kevin Uhlir, <kevinu@cricket.vware.mn.org>

Description
a program that will allow you to make use of the feature of
multidrop kiss mode tncs.

Status
stable, released.

System requirements.
A modern linux kernel and AX.25 kernel support.

Detail
The existing KISS support in the linux kernel is designed for simple single channel KISS TNC's. A number of TNC's support what is called multidrop mode where a single TNC may support a number of modems, each being controllable via an individual KISS port across the same serial interface. Kevin has overcome the lack of multidrop support by writing a program that takes two seperate kiss feeds from the kernel and combining them into a single multidrop feed which it passes to the tnc. The reverse process also takes place where it splits the single multidrop feed into the appropriate individuals feeds.

Instructions on how to compile, install and use the software come in the package.

Where and How to obtain it:
The program is available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/mkiss-1.0.tgz>.

Licensing/Copyright
GNU GPL

Contributed by:
Kevin Uhlir, <kevinu@cricket.vware.mn.org>

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the

sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits>or ifi.uio.no <ftp://ifi.uio.no/pub/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.
11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, drewvel@ayrton.eideti.com

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha software, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks.

Where and How to obtain it:
You can find the software at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/svgafft-0.2c.tar.gz>.

Licensing/Copyright
GNU Public License.

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are
exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people
think look nice but really don't have a lot of use for. I use
sunclock to obtain an at-a-glance indication of the time
anywhere in the world. In its iconic form it sits in a small
Mercator projection. When maximised it produces the same image
but obviously larger with slightly more detail. It also
displays the date, local time and UTC. sunclock actually
calculates mathematically what parts of globe are sunlit and
which aren't, it seems quite accurate, so long as you assume the
earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux
about, so check your nearest archie server. sunclock compiled
straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at
```

the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life
shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture
of the earth onto your X Windows display. It offers either an
orthographic view as you would see from space or the map like
mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Kirk Johnson" <tuna@kanchenjunga.lcs.mit.edu>

14. Installation, Configuration, Hints and Tricks.

This section provides some detail on how to actually install and use
some of the listed software. It will also detail some solutions to
some tricky problems that you might encounter with the software.

14.1. AX.25/NetRom - Packet Radio protocol software.

The AX.25 protocol offers both connected and connectionless modes of
operation, and is used either by itself for point-point links, or to
carry other protocols such as tcp/ip and netrom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and this is available in ALPHA form for you to experiment with. The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card and the Z8530 SCC driver. Any bug reports relating to the AX.25 or Netrom software should now go to Jonathon.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the Netrom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

14.1.1. Where to obtain the AX.25/Netrom software.

The AX.25 software is comprised of two components, the kernel source and the utility programs. As of the version 1.3.* release of Linux kernel source the AX.25, Netrom, Z8530 SCC and PI card drivers are all included as a standard. I recommend you obtain and use the version 1.3.* kernel source. There are three reasons I'm recommending you use the alpha version software and they are:

o it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

o it is the most recent software and is most likely to provide the most satisfactory results.

o like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.
You can obtain the latest kernel source from:

ftp.funet.fi

/pub/OS/Linux/PEOPLE/Linus/v1.3/

You will also need the utility programs. The latest version of those can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-1.3.30.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-1.3.30.tar.gz

14.1.2. Installing the AX.25 software.

The software comes in two parts, the kernel source, and the user programs.

14.1.2.1. The kernel source.

If you are using the 1.3.* kernel source then all you have to do is build the kernel as you would normally.

The following should be safe:

```
# cd /usr/src/linux
# make config
# make dep;make
```

o Be sure to answer `yes' when you are asked if you should include the AX.25 support in the make config step.

o You will also need to answer `y' to including SLIP if you want the AX.25 code to support a KISS TNC or if you intend running a version of NOS on your system and you wish to be able to link it with the rest of your system.

o You will be asked if you wish to include the Z8530 driver.

o If you wish to support the Ottawa PI driver then you must answer `y' when asked: Do you want to be offered ALPHA test drivers ?

and: Other ISA cards ?

then `y' when prompted:

Ottawa PI and PI/2 support.

14.1.2.2. The user programs.

To install the user programs you should try:

```
# cd /usr/local
# gzip -dc ax25-utils-1.3.30.tar.gz | tar xvvof -
```

```
# cd ax25-utils-1.3.30
... if you are using a.out binaries:
# install.sh a.out
... if you want to install ELF binaries:
# install.sh ELF
```

If you want to compile your own binaries then you should do the following:

```
# cd src
# make clean
# make install
```

14.1.3. Configuring an AX.25 connected mode interface.

Configuring an AX.25 port is very similar to configuring a slip device. The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program (refer to the NET-2-HOWTO for more information on slattach and the other network software for Linux). For example:

```
# /usr/local/sbin/axattach -s 4800 /dev/ttyS1 VK2KTJ-1 &
# sleep 2
```

would configure your /dev/ttyS1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ. The sleep of 2 seconds is necessary just to give the kernel a little time to do some housekeeping that it has to do before you try and change the interface.

You can use the axsetcall command to change the callsign of an AX.25 interface after it has been created if you wish.

All this step has done is to actually activate the device in the kernel, you need to run other programs before you an actually make use of the port. The AX.25 ports have a configuration file that can be read by any program that wants to use AX.25 to find information about the port. This file is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

callsign baudrate window label

where:

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.

window
is the AX.25 window (K) parameter. This is the same as the MAXFRAME setting of many tnc's.

label
is a name for the port.

In my case, mine looks like:

VK2KTJ-1 4800 1 radio

At this stage not all of this information is used, it will be picked up and used in later developments. You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use something similar to the following:

/usr/local/bin/call VK2DAY via VK2RVT

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with ` ' as command lines. The ` .' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-1.3.30 distribution for more information.

14.1.4. Configuring Linux to accept Incoming AX.25 connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the software list at the start of this document there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

You do this within the /usr/local/etc/ax25d.conf. This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practise, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a commment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Windows parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by setting or resetting bits in an 8 bit map. You set that map by setting <mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

You need one section in the above format for each AX.25 interface you
want to accept incoming AX.25 connections on.
There are two special lines in the paragraph, one starts with the
string `defaults' and other starts with the string `default' (yes
there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `defaults' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The
`default' line is what sets those default values. The kernel software
itself has some defaults which will be used if you don't specify any.
The trap is that the these defaults apply only to those rules below
the `default' line not to those above. You may have more than one
`default' rule per interface definition, and in this way you may
create groups of default configurations.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /bin/login ax25login
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/bbs bbs %u
#
```

This example says that anybody to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /bin/login login program for them. Any copies of login run this way will appear as ax25login in a ps listing so that you can easily distinguish AX.25 logins from others. Following are definitions for two stations who will receive those permissions.

The last line in the paragraph is the catch all definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the bbs program to run with a command line argument of the callsign of the connecting peer in lower case with no SSID.

If you wanted to define rules for another interface, even a Netrom interface, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package.

14.1.5. Configuring an AX.25 interface for tcp/ip.

If you want to carry tcp/ip over the AX.25 port you have configured, all you need to do is use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note the default route might not be required if you have some other network device conifgured.

To test it out, try a ping or a telnet to a local host.

14.1.6. Configuring an AX.25 interface for Netrom.

To configure Netrom for an AX.25 interface you must configure two files.

The first is the /usr/local/etc/nrports file. This file describes the Netrom port.

This file is formatted as follows:

callsign alias description

Where:

callsign
is the callsign that the Netrom traffic from this port will use.

alias
is the Netrom alias this port will have assigned to it.

description
is a free text description of the port.

An example would look something like the following:

VK2KTJ MTCOLAH Netrom Switch Port

Note again that the first line refers to the first Netrom interface, the second line refers to the second Netrom interface and so on.

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

port min_obs def_qual worst_qual verbose

Where:

port
is the port number obtained from the /usr/local/etc/axports file. The first line in the file describes AX.25 port number one, the second describes port number two etc. If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no Netrom routing will occur and any received Netrom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full Netrom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

```
1 1 200 10 1
2 1 200 10 1
```

14.2. Ottawa PI/PI2 card driver.

The Ottawa PI card is a Z8530 SCC based card for IBM PC type machines that is in common usage by Amateur Radio operators worldwide. While it is most commonly used by Amateur Radio Operators, it could be pressed into service in other fields where it is desirable to have the features of a Z8530. It supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem, and improved hardware design.

A driver for this card has been written by David Perry, <dp@hydra.carleton.edu>, and is available from in the standard linux kernel. Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card driver.

Once you have the PI card driver configured into your kernel then you should reboot and when you do you should see mention of the PI card driver in the messages that appear on the screen while the kernel is booting. The kernel tests each of the I/O port addresses that a PI card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b etc.

If you don't then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI card was not detected by the kernel while it is booting and may indicate that you have some sort of hardware conflicting with your PI card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI card for IP. The configuration of the PI card is virutally identical to that of any other IP interface. Something like the following should work ok for you:

```
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
```

```
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pia arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found etc.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

14.3. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Brandon S. Allbery, KF8NH, contributed information to explain how to achieve this.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must chosoe a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.
Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

15. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.
Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

94004531@postoffice.csu.edu.au or terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

16. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

17. Copyright.

The HAM-HOWTO is Copyright (c) 1995 Terry Dawson.

Permission is granted to make and distribute verbatim copies of this document provided the copyright notice and this permission notice are preserved on all copies.

Permission is granted to copy and distribute modified versions of this document under the conditions for verbatim copies above, provided a notice clearly stating that the document is a modified version is also included in the modified document.

Permission is granted to copy and distribute translations of this document into another language, under the conditions specified above for modified versions.

Permission is granted to convert this document into another media under the conditions specified above for modified versions provided the requirement to acknowledge the source document is fulfilled by inclusion of an obvious reference to the source document in the new media. Where there is any doubt as to what defines 'obvious' the copyright owner reserves the right to decide.

STS-72 should launch Jan. 10, 1996!!!

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

Setup Information for Participating School Ground Stations

By: Ken McCaughey (N3FZX)
File: school01.txt
Date: 20-DEC-95

1.0 INTRODUCTION

The Spartan Packet Radio Experiment (SPRE) is open to amateur radio operators and schools who want to participate. This document will guide you in your preparations for the SPRE mission. Included are some guidelines that will help you to determine if you can hear SPRE and what level of equipment you will need. Please read this document thoroughly. If you have any additional questions please contact the SPRE Project (see Section 10.0).

2.0 MISSION PROFILE

SPRE is one of four experiments on-board NASA Goddard's Spartan OAST-Flyer spacecraft, also known as SP-206. The Spartan spacecraft is one of the primary payloads on the STS-72 shuttle mission slated to launch January 11, 1996.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment and sent to SPRE via a serial connection. Special software called APRtrak (tm) will be used at SPRE ground stations to provide a mechanism to plot the positions of stations and objects world-wide using SPRE transmissions. Ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed station locations plotted on a map. APRtrak system can plot and track both fixed and mobile ground stations. The APRtrak software will decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status, along with the geographical positions.

SPRE can be used as an educational tool in many classes including math, science, and geography. The APRtrak software with its colorful graphics and maps is available on Internet for installation on IBM compatible computers. Even if a school is not in session during a fly-over, a simple packet radio station can be set up to listen to the SPRE telemetry and record the data for later use.

The spacecraft will be deployed by the robot arm 3 days and 2 hours (3/02:00:00) Mission Elapsed Time (MET). After deployment the shuttle will distance itself away from Spartan (up to 100 miles). The battery powered spacecraft will perform its mission following a preprogrammed routine.

SPRE operations will start 2 hours and 41 minutes after the deployment and continue for approximately 46 hours. During the mission the attitude of the spacecraft will be changing. The spacecraft will make about 33 orbits before retrieval.

Near the End-of-Mission (EOM) the shuttle will approach the spacecraft for pickup. At approximately 5/00:30:00 MET the spacecraft will be grappled by the robot arm and returned to its berth in the cargo bay, thus ending the Spartan 206 mission.

Mission Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)
Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees Inclination
Landing: January 20, 1996 at 04:54 UTC at KSC

Spartan Deploy: ~3/02:23:00 MET
SPRE mission: Starting 2 hours 40 minutes after Spartan deployment operational for approximately 46 hours
Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex
Callsign: W3EAX, unproto mode only, do not connect!
Retrieval: ~5/00:30:00 MET

3.0 BASIC SATELLITE COMMUNICATIONS TUTORIAL

This short tutorial is written with SPRE communications in mind. It does include some specific information regarding the Spartan orbit.

In order to communicate with a satellite, its antennas need to be within line of sight of the ground station antennas. When a satellite is in "line-of-sight", you can not necessarily see it. It only means there is an unobstructed path between the two points. Satellites can only be seen visually if they are passing over your location around dusk or dawn.

At an altitude of 165 miles, the Spartan spacecraft has a circular "foot print" that is approximately 1000 miles in radius with the spacecraft at the center. The foot print is the area of the Earth that is in line-of-

sight of the spacecraft. This circular foot print moves with the spacecraft. A ground station that is within the foot print is within line-of-sight of the spacecraft. Where you are within the foot print will determine the angle, or elevation, of the spacecraft above the horizon. During a pass, the spacecraft will rise and set like the Sun and Moon, only much faster.

The quality of a pass is determined by the maximum elevation during a pass. The higher the elevation, the better and longer the pass. The general rule of thumb is that a satellite needs to be at least 5 degrees above the horizon to be heard. However, this will vary depending on the station setup and local topography. A good pass will have an elevation greater than 20 degrees. Passes can last from as little as 10 seconds to as long as 10 minutes. Most satellite tracking software packages can predict passes accurately to within seconds if the orbital elements are up-to-date.

The Spartan spacecraft will be in a 28 degree inclination orbit. This means the orbit is tilted by 28 degrees with respect to the Earth's equator. Therefore the spacecraft will only be directly over head as far North or South as 28 degrees. However, since the spacecraft is 165 miles high and because of the size of the foot print, it is within radio range of stations much farther North or South.

As mentioned in the beginning of this section, the antennas of both the spacecraft and the ground station need to be in line-of-sight. This is not always the case during a satellite pass. This is because the antennas on most satellites have a degree of directionality to them. During a pass the antennas might not be pointing at the ground station antennas, or even the Earth. The orientation of a spacecraft is referred to as the attitude. In the case of SPRE, the antenna system was designed to be as independent of the spacecraft attitude as possible. However, there are some spacecraft attitudes that will result in a degraded signal. During the Spartan mission the attitude will be changing due to the other experiments.

4.0 CAN OUR SCHOOL DO THIS???

The following are some things to consider if your school wants to participate with SPRE. There are different levels of participation to be considered as well.

4.1 SPRE Passes

Before setting up any equipment it is important to determine if SPRE will fly within range of your location. If it does, the quality of the passes needs to be considered. To make this assessment, first look at a map and determine the latitude (degrees North or South of the equator) in which your school is located.

If your latitude is greater than 43 degrees, your chances are hearing or relaying through SPRE are zero.

If your latitude is between 40 and 43 40 degrees, your chances are hearing SPRE are very poor. Your chances of relaying a signal through SPRE are about zero.

If your latitude is between 35 and 40 degrees, your chances are hearing SPRE are very good. Your chances of relaying a signal through SPRE are poor without a well equipped HAM radio satellite station.

If your latitude is less than 35 degrees your chances of hearing SPRE are excellent. Your chances of relaying a signal through SPRE are good with modest equipment if there is not much competition on the uplink.

Latitude	Hearing SPRE	Relaying Through SPRE
> 43	No Chance!	No Chance!
40 - 43	Poor	Very Poor
35 - 40	Very Good	Poor
< 35	Excellent	Good

4.2 Levels of Participation

There are two levels of SPRE participation. These levels have varying complexity, interaction, and equipment requirements.

Full participation would include a setup with APRtrak and an amateur radio station capable of transmitting through SPRE. This implies that the station is at a favorable latitude (see above). The station would be operated by students with the oversight of a licensed amateur radio operator during a pass. A sophisticated station with big antennas and a high powered amplifier are not necessarily required for full participation.

The next level of participation centers around receiving data instead of the ability to transmit to SPRE. This mode of operation requires the least complex equipment and less effort. This may be the mode of choice for schools that do not have the time or resources to put together a complete station or if school is closed during a pass. APRtrak along with a TNC and almost any VHF (2 meter band) radio will work, even a hand-held radio. The antenna can be as simple quarter wave vertical. The more favorable the Latitude the simpler the equipment to receive data. The station can be operated during a pass or APRtrak can be setup to just listen and collect data. All data can be saved to the computer hard disk. All data saved to disk can be replayed on the screen!

4.3 Amateur Radio Operators

In order to get started your will need at least one licensed amateur radio operator. If there are none with in the student body or faculty then please contact Peter Budnik from the Amateur Radio Relay League (ARRL).

He has information on local amateur radio clubs, operators, and volunteer instructors in your area who may be able to assist you.

Peter Budnik
ARRL
225 Main Street
Newington, CT 06111

e-mail: pbudnik@arrl.org

4.4 Equipment and Software

The last major item to consider is the availability of the equipment. It is our suggestion to setup a station in the classroom. See the section below for details of what is equipment required. The equipment needs to be acquired, setup, and tested. This requires a certain level of organization, patience, and technical knowledge. This is where a knowledgeable amateur radio operator will be able to increase your chances or success. Unfortunately, the SPRE Project is not able to provide detailed technical support except with regards to APRtrak.

The needed software is available on the Internet. It is not too complicated, but may require some playing around to get familiar with the programs.

4.5 Successful SPRE Participation

As mentioned above it will take some coordination and planning to get setup for SPRE. It is suggested that, if possible, schools get together and combine efforts. This can also result in more student participation making it a more successful event.

5.0 GROUND STATION SETUP

This section covers the equipment needed to participate with SPRE. It has been the goal of the SPRE Project to make it as accessible as possible to the amateur radio and educational community. We have tried to make the ground station requirements as simple as possible. In general it does not take much power to communicate with SPRE. Since the SPRE foot print is so large, it is potentially within range of dozens or even hundreds of ground stations. All these signals will be competing with each other at the SPRE receiver. If there are a lot of stations transmitting at the same time, then usually the biggest signal wins. However, if a low power transmitter is sending at the right time it can get through just as easily. Always try to use the lowest amount of power needed to communicate with SPRE.

5.1 Hardware

IBM compatible PC:

Recommended configuration Minimum Configuration

386, 486, or Pentium processor XT
VGA color monitor CGA monochrome monitor
640KB RAM 640KB RAM
4MB free hard disk space 3MB free hard disk space
3.5" floppy disk drive 3.5" floppy disk drive
RS-232 Serial Port RS-232 Serial Port

Simple packet radio station setup:

- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
~ TAPR-2 compatible
~ 1200 BAUD AFSK
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)

Note: If you have an amplifier and a beam antenna, it is more likely
that you will be successful in communicating with SPRE. It is
NOT, however, recommended that you purchase this equipment to
attempt communications. The length and scope of the SPRE
experiment is too narrow to justify a major expenditure.

5.2 Software

APRtrak:

APRtrak Version 0.5 is the program that is required to work with SPRE.
APRtrak is similar to another program called APRS. However, APRtrak
contains SPRE specific implementations for decoding the spacecraft
position and telemetry. It is important to get familiar with APRtrak
before the SPRE mission starts. This will increase for success rate.
APRtrak includes documentation on how to make local maps, how to run
simulations, and general information on GPS tracking.

APRtrak is available on the Internet. Below are just two of the many
places on the net where APRtrak can be found:

W3EAX, University of Maryland Amateur Radio Association:
URL ftp://w3eax.umd.edu/pub/spre/aprtrak/aprtrak.zip

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/aprtrak.zip

Unfortunately, APRtrak for Apple and Macintosh computers are NOT supported.

Satellite Tracking:

APRtrak has the ability to track up to ten satellites. The orbital
elements for SPRE and the shuttle may be loaded into the system. There
are many satellite tracking programs available on the Internet. The AMSAT
FTP sight has several program available. In addition, orbital elements
for satellites are available on the AMSAT site.

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/

6.0 PRE-FLIGHT ACTIVITIES

The following are some suggested activities to work on before the launch.

- Play around with APRtrak and replay the simulations. It is important to get familiar with APRtrak before the launch.

- Identify the latitude and longitude location of your school on the APRtrak maps.

- Generate a map of your local area. APRtrak comes with tools and instructions to generate news maps.

- Try to predict the temperature of SPRE during the passes over your location. Will it be hot because it is in the Sun or cold because it is in the Earth's shadow???

- Simulate the SPRE mission using satellite tracking software and the pre-launch orbital elements.

6.1 PRE-LAUNCH ORBITAL ELEMENTS

The preliminary orbital elements below may be used to simulate or predict when SPRE will pass over your location. It can be loaded into most any satellite tracking program. For best results, be sure your simulations use the dates and time listed in the Mission Summary above.

Note: These preliminary elements are for Spartan Spacecraft only, not the shuttle. They are subject to change.

Satellite Name: SPRE-00
Satellite NORAD Number: #40000 <--(DUMMY VALUE)
Element Set Number: 1
Elements Epoch: 96014.48984950
14 JAN 1996 @ 11:45:22.997 UTC
Orbit # at Epoch: 1
Inclination: 28.4779
RA of Ascend Node: 71.7928
Eccentricity: .001131
Arg of Perigee: 189.8166
Mean Anomaly: 358.1771
Mean Motion: 15.85695266
Acceleration/Drag: .0000177
BSTAR Drag: 0

Two Line Element (TLE) Format:

SPRE-00
1 40000U SPRE-00 96014.48984950 .00001770 00000-0 00000-0 0 11
2 40000 28.4779 71.7928 0011310 189.8166 358.1771 15.85695266 18

7.0 SPRE FLIGHT OPERATIONS

During the SPRE mission ground stations will need to have APRtrak up and running and setup for SPRE at least 15 minutes before a predicted pass. When the spacecraft initially rises above the horizon the signal will sound rather scratchy. The higher above the horizon it gets the more clear the signal will become.

Only attempt to transmit after successfully receiving some SPRE packets. Received packets are displayed at the bottom of the screen on APRtrak. If you can't hear SPRE, SPRE will most likely not hear you.

Watch the map to see other stations and the spacecraft. Do not zoom in to close or you may not see other stations. Set the zoom so that you are centered on your state and can also see at least one whole state on all sides.

7.1 OPERATING INSTRUCTIONS

DO's:

- Use APRtrak Version 0.5 to listen and/or communicate with SPRE.

- Use satellite tracking software to predict when SPRE will pass over.

- Set the comment field in APRtrak to the name of your school.

- Make sure your are recording all received data to the hard disk.

- Wait until you receive SPRE transmissions before attempting to transmit.

- Watch for other schools.

DON'Ts:

- Don't zoom in too close on the map.

- Don't attempt to connect using a conventional packet terminal program. It will not allow connects and you will be clogging the frequency with wasted transmissions.

- Don't transmit until you receive SPRE transmissions.

- If your locations has been successfully relayed by SPRE, please do not continue to transmit. Give other stations a chance to get through.

8.0 POST SPRE MISSION ACTIVITIES

The following are someone suggested activities to do shortly after the SPRE mission.

- Replay collected SPRE data using APRtrak.

- See how many other schools you heard and locate them on a map.

- Examine the telemetry and see how hot or cold the different parts of the SPRE electronics are.

- Send copies of your *.HST and *.LOG data files to the SPRE Project. We will take all the data files we receive and generate a composite file. This overview of the mission will then be made available to all schools and amateur radio operators.

9.0 QUESTIONS AND ANSWERS

Hopefully this will answer the most common questions. If not, send electronic mail to the SPRE Project (see Section 11.0 below).

Q: Do I need a GPS receiver.
A: No, APRtrack is used to setup your location parameters which are transmitted to SPRE.

Q: What is the difference between SPRE and SAREX?
A: SPRE will use packet radio in the un-connected or unproto mode. This means that stations can not connect to SPRE. This should ultimately provide more throughput. This experiment involves identifying the location of the spacecraft as well as ground stations. SPRE utilizes APRtrak with a graphical interface making it more interactive and interesting.

Q: How can I find out when SPRE is passing over my location?
A: By using satellite tracking software and up-to-date orbital elements. Tracking software and is available in the Internet. Orbital elements are also available on the Internet including the SPRE WWW home page.

Q: Can the SPRE Project tell me when the spacecraft will be passing over my location?
A: No.

Q: Where can I get updated orbital elements?
A: They are available at the AMSAT FTP site and home page. During the mission they will be available on the SPRE home page (URL http://w3eax.umd.edu).

Q: Can the SPRE Project tell me what kind of antenna or radio to use?
A: No.

10.0 SPRE PROJECT

Participating stations should contact the SPRE Project so that we can try to keep you updated on any changes. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu.

SPRE Home Page: URL http://w3eax.umd.edu
Anon. FTP site: URL ftp://w3eax.umd.edu/pub/spre

I used to keep a schedule online of upcoming hamfests in the Mid-Atlantic (roughly Northern Virginia to New York) area. I'd like to do the same thing this upcoming hamfest season.

I would appreciate it if anyone who knows of an upcoming hamfest would email me with the details, and I'll add it to the list.

Even though hamfest season is still some time away, it's never too early to start!

Thanks,

Chris N3JLY

I have mixed feelings on Code Quick.....

The system is a silly word or phrase for every letter and number. Through repetition, the dih-dahs can translate into these cutesy phrases. As an example, the letter D (dah di dit) is the phrase 'Dog did it'...and the flash card is a picture of a dog looking at the soiled mess he made on the carpet. Cute, I have to admit this is easier to remember than the dits and dahs.

A good friend & I each purchased this, and learned the code with this system. Problem is, neither one of us can now get those cute phrases out of our head when we hear code! This leads to a double translation...remembering the phrase, then translating it to the corresponding letter.

For learning the basic alphabet quickly, it helps. The tapes are very weak on numbers and puncuation...very little time is spent on these, seems like it was thrown in as an afterthought at the very end.

It does do a good job of teaching the code, but beware, you'll be carrying those stupid phrases around in your head for a long time.

Well...about 90 miles south of Metro DC is the annual Frostfest in
Richmond.

Held at the Showplace...3000 Mechanicsville Tpk, Richmond, VA
Sunday, 1/21/96 from 8:30 to 3:30.

Take I-95 south to I-64 East (Exit 75) to US 360 East (Exit 192).
Showplace is 1/2 mile on the left.
Parking is free, admission is $5.00. No discounts for advance tickets.
Licensing exams are usually conducted the day before. Not sure what is
planned for this year.

Info is available through the voice mail service of the Richmond
Amateur Telecommunications Society at 804/739-2269. Enter box number
3378 (FEST) for general information and table reservations.

Major retailers are expected there (most notably HRO, but there are
many others), a number of manufacturers (not sure who has committed
yet), and ample flea market space. Computer vendors will also be
there.

Hope to see you there!

E-Mail me if you need more info.

127. Best system for urban simplex communications???

Date: 1996-01-03 00:00:00 UTC
From: larry@lmb-tech.com
Message-ID: <4ccti7$q6h@ftp.netgate.net>
Source record: 232844

I'm looking for the best and most economical way for mobile simplex communications in an urban environment over about a 25 mile range. My wife and I currently use 2m at about 30 watts and 1/4 wave antennas. This has worked fine for the last few years over a range of about 10 miles. My new job has a longer commute and this gives rise to an increase in needed range.

We're not interested in bothering others chatting for 20 minutes on a repeater, and I'm sure nobody wants to listen to us either. I've got an Explorer with the antenna on the roof. A larger antenna won't work well since I need to park in the garage. Our car could handle a larger antenna though.

I was thinking of three options:

1) 10 meter radios
2) Increase power for both 2m radios and improve car antenna.
3) Build small private pl controlled repeater and install tall antenna at our house.

Any comments? I imagine option 1 would be the least expensive. Would a couple of 25w 10m radios provide the range? I've got no experience with 10m.

Thanks, Larry, n6txx

Newsweek magazine had these stats some time ago.
Hemophiliacs really got it since the their injected clotting factor
usually had a mix from several thousand people. Guaranteed HIV exposure.

Enough ... wayyyy off topic.

Options 2 and 3 are probably better bets if it's urban. I've found that 6 and 10 meters have much better groundwave characteristics than 2 meters, but if there are a lot of buildings in the way, it may be a problem. UHF seems to do a little better getting around in an urban area. 10 or 6 give great groundwave outside of the city.

For an inexpensive repeater solution, you might look for a cheap dual band mobile, and set it on a building top somewhere. One of you then runs UHF simplex to it, and the other runs 2 meter simplex to it. Since you won't need a repeater duplexer and other associated expensive equipment, it should be a lot cheaper. Don't forget to pick up one of those $50 CW-ID boards for the dualband repeater to keep things legal!

Good luck!

: For months now I have been following the message threads on this
: Newsgroup. Instead of meaningful discussion regarding ANY number of
: aspects of amateur radio, it appears that this is nothing more than a
: sounding board for people to trash one another. This newsgroup is brought
: to you by incredible technology. Why not use it for constructive
: meaningful discussion? I don't get it. Of course, I can only imagine, let
: the flames begin.
: Greetings for a very good new year.

This is the typical Usenet news now that Usenet is carried by so many
providers that DON'T CARE who or what they issue accounts to. Back in
the old days of Usenet a flame was for a true LID. The same thing has
happend to Usenet that happend to CB radio. It is exactly what happend
to CB. Think about the history of both. Ham radio in general is heading
in that direction too. It's just happening slower. Hams are a little
smarter than Usenet guru's. Hams put a "high tech" system on the air and
leave figuring it out to the users. If the users can't figure it out, they
go away. With Usenet too many books are written on how to use it. Now any
one that can read, can trash the net. :-)

The best way to use the net these days is to screen what you read. You can
tell by the subjects who and what is posted. Yes, it takes longer to read
news but at least the heart ache is less. I guess thats why the call it the
misc group :-)

As most of you probably know, ACC is no longer in business. We have purchased rights to their software for the RC-96 and RC-85 and can photocopy their manuals. Since the RC-850 was discontinued before ACC closed their doors, we did not receive anything for it except the Inspector program. It is now available on our ftp site (ftp.netins.net in directory showcase/linkcomm/acc). We also have a listserver for discussion of ACC's and our repeater controllers. To subscribe to the listserver, send a message to:

majordomo@engrng.pitt.edu

In the body of the text it must only have, all lower case.

I can see this "conversation." will go nowhere. Amateur radio IS a **hobby,** after all, and each of us who are caught up in it chooses the facet of it he personally wants to pursue.

< I do not think it is easy. But useful? >
By its very definition, a hobby doesn't have to be "useful." How "useful" is the yammer of the "shack on a belt" crowd on the 2 meter repeaters? Or 432 MHz moonbounce QSOs? Or the collection of 10-10 numbers? Or... ad infinitum. I don't do these things because they don't interest me, but I certainly don't feel compelled to publicly disparage the many amateurs who clearly do enjoy them.

< ...not easy but pointless. >
To you, maybe. So be it. If you don't like contesting, that's your inalienable right. Nobody can quarrel with your preferences -- but the fact that another person may be interested in something you're not doesn't make that person **inferior** to you. I like contesting. I do it well. It makes me a **far** better than average radio operator. And I don't have to justify that to you or anybody else.

73 & best wishes for 1996

Somewhere I remember seeing software that lets you use a PC soundcard, like
a SoundBlaster, as an AF spectrum analyzer. I'm not sure if it required
you to have your own noise generator, or if it generated noise or had
a tracking generator simulator built in or what. Anyone know anything
about it? Anyone have it? Does it work well? How does it work?

Please respond by email. Thanks.

150. K1MAN ..... is this guy for real ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-03 00:00:00 UTC
From: pgeorge@sallie.wellesley.edu
Message-ID: <3JAN96.23112162@sallie.wellesley.edu>
Source record: 232867

I have been hearing the same amateur radio bulletin now for the last
two weeks. A station licensed as K1MAN seems to be providing a broadcast
service...day in and day out in the middle of the VERY PRECIOUS AM window
in and about 3885 (plus or minus a few KCs). I am totally for amateur radio
bulletins. They DO provide a much needed service to the amateur service.
But broadcasting for hours at a time with the same taped programming hour
after hour seems to be a little redundant or if not.... very illegal. I
am sure the IARN provides help to those who need it. But I tend to think
that monopolizing the 80 meter AM window is not right, not in the least.
Once in the morning, once in the evening is fine. But 10 hours a day ?
Come on, Glen.

Yes. The FCC can handle this. Or at least they would if anyone was working.
When (if) the bozos in Washington DC (they all seem to qualify either
directly or by association), you should be able to get it taken care
of. I believe the instructions on the full-sized 610 (the one with the
instruction sheets still attached) explains the procedure.

I've another idea. Consider trying 2 meter SSB. You'll find it's got plenty
of range for your needs, with 25 watt radios and sqloop antenna on the car(s).

10 meters would also be worth playing with, on SSB.

Finally, do some more playing with the 2 meter mobiles you have, using better
antennas.

Subject: Utah statehood celebration

On January 4, 1996 the State of Utah will celebrate its centennial anniversary. To commemorate this event the Utah Amateur Radio Club (UARC) will operate W7SP from 1600Z to 2300Z on January 6, 1996. Operation will be from the State Capitol and will take place on or about 14.196 MHz.

The history of Utah is as unique as its geography is diverse. Utah residents enjoy terrain that ranges from barren deserts to spectacular mountains. The first explorers entered the area that was to become the "Beehive" State in the late 1700's. By the mid 1800's settlements existed in the territory. Major settlement began when the first Mormon pioneers arrived in the Salt Lake Valley in July of 1847. In the following decades more settlers arrived by the thousands. Today Utah has grown to include several modern cities with Salt Lake City as its Capitol.

UARC invites you join us in this commemorative event. For QSL send QSL and SASE to UARC, 2671 Dolphin Way, Salt Lake City, UT 84121.

161. Re: 2 Channel Maxtrac to 16 Channel Maxtrac Conversion?????

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-03 00:00:00 UTC
From: wt2@prism.gatech.edu
Message-ID: <4cd9qc$80r@sundial.gatech.edu>
Source record: 232878

Scott,
Converting a Maxtrac from 2 to 16 Channels involves changeing out the front panel, changeing the controller / firmware, then programming in the new data for all your 16 ch. It is easer / cheeper on radios with a 16 pin connector on the rear. But, if you can get 16, you can usally go to 32 channels for the same effort / money. I have a high band VHF Radius 8 ch, that is now a 32 ch. Maxtrax. In theory, you could go to 99 channels! The MaraTrac, which is little more than a Maxtrax in a Larger case, with a bigger P.A., is a available as a 99 ch. radio. But, easy as it seems, I have never seen anyone do it. Let me know if I can help more, and how about sending me your article on the conversion? By the way, I tried to reply via E-mail, however it bounced over several trys.

>I'm also interested in purchasing a used dual-band HT (2m, 70cm) or used 2m
>HT so if you have one in excellent condition that you'd like to sell
>please send me e-mail.

I have a Kenwood TH-79 with all the trimmings:

5w battery pack
3w double-life battery pack
alkaline pack
MFJ speaker/mic
2-pack rapid charger (75min on 5w pack, 90min on dbl-life pack)
antenna
soft case

Radio has 80 memories +2 calls. Aside from 2 calls (one on each band),
the 80 channels can be distributed between the two bands as you need
them. It's not necessarily 40 per band. All channels can be labeled
with a 7-character alphanumeric ID.

PL encode/decode also included.

If interested, make offer. E-mail please, to jtriolo@mci.newscorp.com

Putting burt down, with his room-temperature IQ, is as easy, and as
accidental as falling off a log.

Especially since the original statement was "Hell, you probably don't
know [an electronics question]" and finally, he posted his retraction
apologizing to all the "stupid hams" who "didn't know the answer."
Meanwhile, he cast aspersions on me, my heritage, my masculinity, even
my testicular count, my age, my favorite hobby, he compared me to
Hitler, he challenged me to an on-the-air cussing session to see if my
'mouth is quick.'

And I need to get a life?

I feel sad for burt.

I feel sad that he purposes to teach electronics but doesn't know what
a transistor is; I feel sad that he posts to the world his ignorance; I
feel sad that he lashes out at a total stranger, just like the guy who
blew up the Federal building in Oklahoma, or the guy who poisoned
Tylenol; I feel sad that he is preoccupied with my "balls" or how
"quick" an anonymous male's mouth is (who knows, maybe if he spent more
time thinking about women, he'd still be married); I am sad that he
casts aspersions on someone because of his age, just like Abbie Hoffman
did once; I am sad that he is so interested in seeing his own postings
and how many followups he can generate, that he doesn't even engage his
"brain", or what's left of it after the pharmacological 70's that he
barely remembers; I'm sad that he wants to fill the airwaves (if he
even gets on the air these days) with cussing and posturing - while I
know what the outcome would be - instead of trying to fix what he
bemoans is going down the tubes.

I feel sad for burt.

170. Re: ACC RC-850 repeater controller mailing list?

Newsgroup: rec.radio.amateur.misc

Message-ID: <4cfep3$63m$1@mhafn.production.compuserve.com>
Source record: 232742

I assume you know that the RC850 is out of production and ACC is out of business since mid 1995....LinkCom now owns all software, etc to the ACC controller products and can help with some limited software support....
I have RC850 SN 363 and was one of the main forces behind the tri-autopatch codes in the system (1st brought in with V3.41) and then discovered the 850 had limited call routing (1st and 2nd autopatches can have SAME access code but access different lines, etc so users dont know the difference!)....Ed liked that!!

maybe a Linkcom/ACC products group should start up...Linkcom has a listserv for those interested in their products and new software releases...and I am helping Steve and Alan at Linkcom evaluate new software and new ideas for the RLC3 (I have replaced my 850 with a RLC 3 but still own the 850 as well as two Shackmaster 100s, an ITC32 and had a RC85 for a while....)

175. Crowbar circuit for PS

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: av8r@ncw.net
Message-ID: <4cfnoh$fdg@golden.ncw.net>
Source record: 232747

Does anybody have a good circuit for a PS crowbar? I have the general idea about how to build this, but I need the specifics...zener diode triggers gate of SCR, but I fried my last project by not using a current-limiting resistor of a large enough value. IF I do use a large enough resistor, the zener won't fire... I'm trying to get a cut-off voltage in the 14.5-15 volt range. Initially, this was for a home-built 30A supply, voltage variable from about 5 to 14 or so. I'm open to suggestion. I may now use a similar circuit to protect an as-yet-unbuilt smaller supply of about 5A, but haven't decided. Questions: 1. What voltage zener should I use? 2. What value resistor? 3. Any recommendations for an SCR for either supply? The 30A supply is being mothballed for the time being, as I may either re-wind the transformer or just get a new one, so I'm *really* interested in what would work for a 5-amp unit...

Any assistance *gladly* appreciated!

It's really unfortunate that a small number of morons can dump so much
trash on this newsgroup, forcing many to wade through childish diatribes
and know-nothing displays of verbal backwardness. Fortunately, for many
of us, I suspect, the old newsgroup reader filtering does work and we're
spared most of the nonsense generated by the likes of the argumentative
but ill-informed Cape Cod bore. Sadly, there's not much that can be done
other than ignoring these childish rants. Eventually, I suppose they'll
go away - perhaps to 80 meters....But then hope springs eternal...

Yeah, all you have to do is write a letter telling them you lost
your license (NY9S) and attach that to the 610.

PS, I am usually on 3875. I'm glad you're on 3885. I listen sometimes. When
prop is good I like to open up my 850 (cringe) to 12KHz and the AM sounds
nice.

182. Re: What Percent of the Market does Mac have...?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: Robert Beeman <auchstet@gate.net>
Message-ID: <Pine.A32.3.91.960104102158.54176A-100000@navajo.gate.net>
Source record: 232754

According to the reputable info that I have seen, Apple has about 13% of=20
the US market and 11 % of the world market. I think this is based on=20
units sold, not dollars, but I could be wrong. There is some info on=20
this on the Apple Web site at http://www.apple.com.

I admit that I'm a Mac man. I have a pc running Windows 3.1 for=20
workgroups and Microsoft Office at work and a 10 year-old Mac Plus=20
running 6.0.8 at home. I find the Mac more reliable for the stuff I=20
actually do and I really like the Mac as a machine and as an environment.

I have a feeling, though, that PC people who try to quote Apple market
share are often trying to convince someone to buy a PC because "Apple is
going broke" or some such nonsense. This is ridiculous IMHO. There is a
lot of good evidence that Apple's share is increasing slowly, even without
counting the new authorized Power Mac clones.=20

But even if the worst happens, so what? After TI stopped supporting the=20
TI-99 I continued getting catalogs for new TI-99 equipment for almost 5=20
years courtesy of little niche companies. There are a lot more Macs out=20
there than there ever were TI-99s. If Apple went broke today your new=20
Mac would be supported by somebody until long after it reached=20
technological obsolescence.

So buy a PC or buy a Mac. Be happy. But don't knock choices made by other=
s.

[:-) Bob K9PLH.

>mod his audio for my flat mods with the unit still in warranty, will
>it void the warranty? I told Paul I would ask you guys first...

No problem - go ahead and make the modifications. Just be careful when
de-soldering parts on the four-layer circuit boards so you don't pull
the plating out of the holes.

If you wouldn't mind posting them, there are a few of us that would like
to know which mods you make. A discussion of the benefits of using flat
audio might also be helpful.

SA> sanderman@delphi.com

Is this the successor to the "01-61" repeater of the early 1980's? Do
you know if the repeater uses an ACC 850 with DVR these days? As I
recall, the last time I listened to 147.435 there was a controversy
involving Jeffrey Breagle (spelling?). I wonder what the outcome of
this was...

Just curious....

188. Re: K1MAN ..... is this guy for real ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: gayle@ldd.net
Message-ID: <4ch4mg$a5g@sparky.midwest.net>
Source record: 232760

K1MAN is not really any worse than the ARRL.

Both of them:

(1) Transmit hours of meaningless drivel
(2) Power up and transmit in the middle of QSOs
(3) Are under the impression that they own "their" frequencies
(4) Provide some small amount of service
(5) Get involved in on-the-air bashing of each other and other Hams
(6) Do something that, IMHO, is prohibited by Part 97 and should be cited for their activities

In the meantime, K1MAN and the ARRL are operating within the rules as the FCC has interpreted them. We can't allow the ARRL (or anyone else) to do something and then prohibit others from doing the same things.

Enjoy Amateur Broadcast Radio!

>lot of good evidence that Apple's share is increasing slowly, even without
>counting the new authorized Power Mac clones.=20

Quite frankly, I expect the Mac as such to be extinct in another year and a half. There'll still be an Apple, and they will still sell so-called Macintosh computers, but they'll be based on the PowerPC Platform standard and won't really be any different, in terms of compatibility, from what IBM and others are selling. With one of these machines you'd be able to run MacOS, Windows NT, the Be OS or maybe even OS/2 Warp Connect, regardless of whether the box came from Apple or from somebody else. He who starts to dislike Windows NT will be able to switch to MacOS without much grief...or vice versa.

(What you won't be able to do, according to Apple, is read 400K or 800K Mac diskettes on these new systems. They'll have PC-style floppy controllers only, since part of the idea of the PowerPC Platform is to get away from the proprietary chips that Apple has such a hard time obtaining.)

>I use some sort of shorthand to write fast enough?

Most people take these tests one letter at a time. Do you copy ENGLISH
one letter at a time? No, one WORD at a time. At 13 wpm, however,
it may not be possible to do this (below 18 wpm I can't remember the
beginning of the word!).

I've seen numerous people take laptops into test sessions, too.

>3) What are the specs for the code that is used in the 5wpm and
>13wpm exams?
>i.e.:
>Tone frequency? Varies, usually 600-750 Hz.

>dah to dit time ratio? Usually the standard 3-1 ratio.
>How long is the text? Depends on speed, I usually do 5 min.
>Are we given time to clean up our copy after transmission is
>complete?

Usually, yes. Some give an unlimited time, some stop you.

>How many mistakes are we allowed?

All exams require a minimum passing score of 70%.

>As you may be able to guess, I've never taken a code exam yet,
>so I'm looking for all the insight I can get.

Nearly everyone uses the Farnsworth method (5 or 13 wpm sending speed,
20 wpm character speed, leaving more time between characters).

194. ARC- 5 Command Set Transmitter Tips. ver. 2.0

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: davidst1@aol.com
Message-ID: <4cgj9f$ll9@newsbf02.news.aol.com>
Source record: 232766

ARC-5 / SCR-274N Command Set Transmitter Tips.
(Current 1-3-96. Supercedes older versions which
should be burned so I won't get blamed for them.)
(Previously posted to the Boatanchors mailing list)

Transmitter Types.
The common HF Command Set transmitter types come in
four flavors. The Navy ATA-series units, designated "CBY-xxxx,"
were finished in black wrinkle and are electrically identical to
the later Army units. The Army SCR-274-N units are
designated "BC-xxx" and come in either black wrinkle (early)
or bare aluminum (late). The Navy AN/ARC-5 units, designated
"T-15" to "T-22" are all black wrinkle and include a few design
refinements. The ARC-5 series uses a different rear connector
and differing pinouts. The procedure for reviving these old vets
is the same throughout. The AN/ARC-5 T-23 VHF transmitter fits
the same rack as the HF rigs, but differs in important ways
not covered here.

Rear Chassis Pin-outs.
Tack-soldering to the rear plug works but be mindful of
the safety hazard in doing this. I've homebrewed plugs
using pins from junker receivers and that worked OK. I don't have
a good solution and will leave this to the many minds brighter
then mine. Count the pins from the outside with the rig upright,
starting from the top right and going clockwise,
counting the center pin as #7.

Navy ARC-5 (T-15 through T-22)
1 N.C.
2 Osc. B+
3 Selector relay (here used for keying)
4 Ground
5 Filiments
6 PA Screens
7 PA Plate B+

Army SCR-274-N (BC-696, 457-459)
and Navy ATA (CBY-xxxxx)
1 Ground
2 PA grid drive test point
3 Osc. B+
4 PA Screens
5 Selector relay (here used for keying)
6 Filiments

7 PA Plate B+

Operating Voltages.
Filiments and relays need 24VDC at about 2 amps. I don't run +28 VDC
because it's better then 10% high on the tube filiments. B+ voltages are
not critical. Oscillator B+ is designed for about +200 VDC at 20 mils.
Don't run over +250 VDC as this will cause component heating and drift.
Regulated is better but not manditory. My units run without regulated
osc. B+ and drift very little after warm-up. PA screens were designed
for about 250 VDC and the PA Plate circuit for 550 VDC at 150 mils.
I wouldn't push past 600 VDC Hi B+.

Practical Supplies.
You can provide all the needed B+ voltages from a resistive divider
chain on you Hi B+, and this is how the original design worked.
Here's a simple divider you can draw out. Mark a point on your paper
as "A". Connect Hi B+ and pin 7 to point A. Connect one side of a 20K
1W resistor to point A and the other side to pin 4 or 6, your PA screen.
Connect one side of a 15K 1W resistor to point A and the other to a
point we'll call "B." Connect the Osc. B+ pin 2 or 3 to point B.
Connect a 100K 1W resistor from point B to ground. You may need
to experiment with these values. Any value of Hi B+ from 300-600 volts
with this divider will give you a working rig.

On keying the rig:
Unless you plan to build a complete racked system, some small
changes will be needed. The original design used relays to key
all the B+ supplies at once. I think Bob Keys's method is the least
invasive, most elegant and 100% restorable. The TX selector relay
is used to key the PA cathodes to ground and the Osc. B+. Since
only the +24 VDC filiment appears across the key, it's also safer
then all those cathode keying schemes that require you to trash
your honorable war veteran.

Resuscitation.
Remove the transmitter top and bottom covers. Locate the antenna
selector relay with the big swing armature above the roller coil.
Clip one power lead and tuck it out of the way. Carefully move the
spring contact on the roller coil output over the antenna connector
so that it makes contact all the time. Turn the transmitter over and
locate the transmitter select relay. Carefully bend the small contact
so that the Osc. B+ keys before the PA cathodes are grounded.
While you're in there, replace the bathtub cap in the rear.
More on this later.

You'll probably want to clean the roller coil turns.
DON'T sandpaper, file or wirebrush them!! I've cleaned them with
a little Cramolyn or even just rubbed them good with a soft gum eraser.
Remember that ceramic is easy to stain! Even with clean turns,
expect a few intermittants as you tune. Once it's right, you won't
change it much.

Lubricate the roller coil bearing and thumbwheel joints using a good
household oil. Don't put oil on the ceramic-mounted end.
A drop of liquid Cramolyn works well there. Lubricate the moving
adjustments throughout, except for the electrical contacts of course.
Use liquid Cramolyn there. Don't over-oil as it will gather dust.
Put the covers back on and you're all done.

Antennas.
I recommend using a resonant, 50-ohm coax-fed antenna.
Yes, it was designed for a short, wire skyhook. That will work but
you're asking for RF burns, tedious tuning and other headaches.
Put a 50 pF, 2KV or better cap in series with the antenna output
post and connect that to the coax center. The coax ground can
be connected to one of the top screws. Connect a short ground
bond between the transmitter and any outboard gear, especially
an antenna tuner or the BC-442 antenna switch.

Tune-up.
Set the antenna coupling control to maximum and the roller to 0.
Key the rig and monitor the plate current. Plate current should be
somewhere around 40-50 mils. If the plate needs "dipping"
(and it shouldn't), you do it with the center varible under the chassis
through the holes on the side. Leave the bottom cover on and
screwed down or your tuning will be off. *DON'T* mess with the
tuning slugs in the PA stage or the oscillator! This will foul
the tracking that keeps the finals tuned throughout the band.

Watch the wattmeter and crank the roller coil for max out. Intermits
in the roller coil will cause lower dips in plate current. You'll get
from
25-40 watts out at about 100-150 mils of plate current. That's all
there is to it. Tuning the rig this way will minimize chirp, by the way.

An important note about chirp:
In old WWII MO-PA rigs, a slight chirp was expected and accepted.
You can't expect 90s keying from a 30s rig. However, I use the
rigs even on 40 meters with very little chirp. The key is in properly
tuning the rig, and having good .05 bypasses. I have a BC-459
40 meter rig on the air tuned this way and it has no noticeable chirp.

Concerning that 3x.05 uF bathtub cap:
On the rear chassis wall you will find a little bathtub with three
.05 ufd 300 VDC capacitors to ground. With apoligies to
Boatanchor Bob, I always replace this cap.
I have rebuilt many command transmitters and have never
had one in which the bathtub survived very long, if it wasn't
shot in the first place. Leakage in this cap is the #1 reason for drift,
chirp and roasted resistors in these units. It changes the load on
the oscillator, kills drive and fouls the PA bias.
You need to keep the original wiring in place for both drift and
calibration's sake. I usually cut out the mica, remove the old
rotten gloop inside and put three nice little .047 mylars in there.
You may have a simpler solution.

Good luck and hope to see you on the air.

> Mike, KK6GM

If the transistor is in saturation, then Vce is roughly 0.2 volts,
with the polarity depending on the type of transistor. This is
independent of any other circuit parameters.

Peter,

At the risk of eliminating most other broadcasts (ie W1AW bulletins, code practice etc.) your main LEGAL recourse is to complain to your congressional representatives in the state and federal government, the FCC and the ARRL that broadcasting should be prohibited within the amateur bands.

Appealing to K1MAN to cease operation will not work.

You must live near his station...

Anyway - good luck 73 - Mike KE4END

PP>for the lower 48? (WL7 would not be...)
PP>
PP>73 de Penn
PP>

No, WL4xxx would not be OK for the lower 48. All AL, KL, NL, and WL prefixes with any numeral are now assigned to Alaska. This is a fairly recent change (about Oct 95?). Actually, there is a small block of KL9 calls assigned to US personnel in Korea, but you could conceivable hear a KL0 (or whatever number) from Alaska any day now.

In the same change, KH7 calls (except KH7K__) have been assigned to Hawaii, and Puerto Rico picked up KP3___ as a prefix. (KH7K__ is assigned to Kure.)

208. Morse code exam symbols

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: socci@bns101.bng.ge.COM
Message-ID: <9601041416.AA22291@bns101.bng.ge.com>
Source record: 232780

I guess I'm what a lot of people are calling a "wanna-be"tech,
I'm a no-code tech, but I am working on the upgrade.
I am currently practicing code using a morse code trainer on the
PC (cp.exe shareware), but I'm having some difficulty. Any
help in the following areas would be greatly appreciated.

1) What symbols do I need to learn to pass the 5wpm and 13wpm
exams? I know I need letters and numbers, but what about
punctuation and CW symbols?

2) Any general tips on the best way to learn and improve speed?
The CP program is excellent in its way of grouping letters in
it's beginner menu, but I still have difficulty in hearing,
decoding, and WRITING DOWN a letter before the next one starts.
I also occasionally misidentify "dahs" as "dits". (What can I say,
six years in the US Army Field Artillery will do wonders for the
ears). Should I be writing down letters as I hear them, or should
I use some sort of shorthand to write fast enough?

3) What are the specs for the code that is used in the 5wpm and
13wpm exams?
i.e.:
Tone frequency?
Spacing?
Words or random letters?
dah to dit time ratio?
How long is the test transmission?
Are we given time to clean up our copy after transmission is
complete?
How many mistakes are we allowed?
As you may be able to guess, I've never taken a code exam yet,
so I'm looking for all the insight I can get.

73

Do not forget the irony of the fact that burt is an amateur himself.

The image of a clown beating himself up comes to mind...

QST de W1AW
DX Bulletin 1 ARLD001
From ARRL Headquarters
Newington CT January 4, 1996
To all radio amateurs

SB DX ARL ARLD001
ARLD001 DX news

The items in this week's bulletin are courtesy of Jean Michel, F6AJA, Jules, W2JGR, Chris, G4BUE, Tedd, KB8NW, Joe, NJ1Q, the OPDX Bulletin, the YCCC PacketCluster network and Contest Corral from QST. Thanks to all.

NEPAL, 9N. There have been reports that Shin, 9N1SW, now has permission to operate 160 meters. Try 1824 kHz starting around 2100z. QSL via JH1XUP.

UNITED ARAB EMIRATES, A6. Check 14216 kHz from 1400 to 1530z for A61AN. QSL to Naser Fekri, PO Box 53656, Dubai, United Arab Emirates.

CONGO, TN. Hazel, TN7OT, is off the air due to radio failure. It is doubtful she will be on the air before departing the Congo in April.

BANGLADESH, S2. Though JA2NQG and JE7RJZ have canceled their trip, other operators from the Japanese UNICEF Ham Club might be active sometime between January 5 and 12.

CHRISTMAS ISLAND, VK9X. DL8WPX, DL3DXX, DK7YY and DL7UFN will sign VK9XY February 4 to 13. They will operate CW and SSB on 160 through 6 meters and satellites. QSL via DK7NP. Then it is on to VK9C.

COCOS KEELING ISLAND, VK9C. The German team will be active as VK9CR February 14 to 23.

CENTRAL KIRIBATI, T31. T30DP is going to Kanton for business in early January and will be QRV as T30DP/T31, only on 20 meters. QSL via VK4CRR.

REUNION ISLAND, FR5. Albert, F6EDF, will sign FR5AK or FR/F6EDF through January 19. Antenna restrictions limit his activity to 20

meters. Check 14190 kHz.

CAMBODIA, XU. A station signing XU1XX/3 was recently heard on 14195 kHz at about 1500z.

KERMADEC ISLANDS, ZL8. The Kermadec DX Association has been issued both landing permit and operating license for their 11 day DXpedition to Raoul Island slated for May 1996. They will sign ZL8RI. The team thus far consists of Chris, ZL2DX, Ron, ZL2TT, Lee, ZL2AL, Ken, ZL2HU, and Al, WA3YVN. An operator is needed to replace Ron, ZL1AMO, who will not be making the trip. If interested, contact Ken, ZL2HU.

FRENCH ANTARCTIC TERRITORY, FT. FR5HR is on Reunion Island waiting for transportation to Crozet, Kerguelen and Amsterdam Islands, FT8/W/X/Z. Departure is slated for February 12 with the first leg being to Crozet.

GEORGIA, 4L. In what may be the first satellite operation from 4L, Sergey, UA6JR/3, will sign 4L1R through January 18. Check 145.885 MHz on OSCAR 10 and 145.890 MHz on OSCAR 13.

U.S. VIRGIN ISLANDS, WP2. Gerald, K9BG and Bob, KS9W, will sign /WP2 from Saint Croix through January 10. Besides CW and low bands activity, they will enter the ARRL RTTY Roundup. QSL via home calls.

DOMINICAN REPUBLIC, HI8. Berthold, DF5WA, will sign /HI8 from Juan Dolio January 16 to February 6. Though concentrating on 160 and 80 meters, he will be on all bands operating CW, SSB and RTTY. QSL via DF5WA.

DOMINICA, J7. Scott, N9JCL, Tom, K0SN, Paul, WC9E, and Jim, AA9PB, will operate from Dominica from late evening January 20 to the 25th. Besides all HF bands, they will operate RS-12. QSL via K0SN. They may operate from Antigua, V2, on January 20 while en route to Dominica.

VK2SG SK. Sid, VK2SG, became a silent key on December 29, at the age of 76. He and Bill, VK2EG, co-founded the Australian National Amateur Radio Teleprinter Society, ANARTS, and the weekly RTTY DX Notes, later known as the VK2SG RTTY DX Notes. Sid was the first Australian recipient of a RTTY DXCC award. RIP Sid.

ZF1RC STRUCK BY LIGHTNING. The house of Roger Corbin took a direct lightning strike on December 23. Although it was fortunate that nobody was hurt, the lightning wiped out all electrical equipment in the shack and most in other rooms. ZF1RC is consequently QRT for a while. Roger also regrets that his response to requests for his QSL cards will be very slow until he can get sorted out.

THIS WEEKEND ON THE RADIO. Check out the ARRL RTTY Roundup on January 6 and 7. Full contest information appears on page 106 in

December QST.

214. GB2RS News 7th January 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <820807363snx@llondel.demon.co.uk>
Source record: 232786
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 7th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners. And a very Happy New Year to all GB2RS listeners.

Following the main news this week, we will be bringing you a review of propagation during 1995, which has been compiled by Charlie Newton, G2FKZ, and Neil Clarke, G0CAS. This will be followed by the solar factual data and solar forecast, and then the regional news.

The DTI has set up a new telephone advice line service to help electrical and electronics equipment manufacturers ensure that they have the most up to date technical information on how the new EMC Regulations affect their businesses. The EMC regulations, made under the European EMC directive, came into effect on the 1st of January and require electrical equipment to meet certain requirements to prevent electrical interference and improve immunity to interference.

The advice lines will be run by the EMC Clubs, set up as part of the DTI-funded EMC Awareness Campaign. They are intended to help, in particular, smaller manufacturers who are still unsure of the extent and requirements of the regulations. If you are involved with a small business manufacturing electrical or electronic equipment and wish to take advantage of this advice service, please contact Fiorina Sinapi, 2E1EJL, at RSGB Headquarters on 01707 659015, who will give you the correct regional number to contact.

Another new 70 centimetre GB2RS service starts today, the 7th of January. It's an evening broadcast from Portland in Dorset on channel SU21, which is being transmitted at 1930 local time from the station of G1OCN, with G7OLW as reserve newsreader. Good coverage is expected of the south coast area, and reports - especially from Novices - will be welcomed.

The Worked All Britain organisation has announced a new award for amateurs and listeners which commenced on the 1st of January. The award is based on the 10-kilometre squares of the Ordnance Survey national grid, but without county boundary complications, and is known as the Millennium Award. It has been introduced because of the uncertainty regarding the future of local authority and county boundaries following the Review of Local Government. The new award will operate alongside the existing WAB awards programme. Full details of the requirements are available from Brian Morris, G4KSQ, whose address is correct in the RSGB Callbook.

Also from the 1st of January, the Worked All Britain Awards Manager is Kate Wragg, G0FEZ, whose address is correct in the RSGB Call Book. All WAB award claims should now be sent to Kate.

A new HF beacon has joined the wordwide beacon network. YV5B is now operational on 14.100, 18.110, 21.150, 24.930 and 28.200 MHz from a site 1300 metres above sea level near Caracas in Venezuela. The beacon transmits in sequence with stepped power outputs from 100 Watts to 1 Watt to a multiband vertical antenna. The sequence starts at 10 seconds to the hour on 14MHz, moving at 10 second intervals to 18, 21, 24 and 28MHz. The pattern is repeated every three minutes through the hour.

A new 10 metre FM packet mailbox started operation on the 29th of December. It is GB7COS, located at St Osyth near Clacton on Sea, and operates on 29.250 MHz. Reports will be welcomed by the Sysop, Tony Horsman, G0MBA, by packet at GB7COS.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

The ARRL DX Advisory Committee and the Awards Committee have voted in favour of adding Pratas Island - BV9P - to the DXCC Countries List for contacts made since the 1st of January 1994. QSL cards from Pratas Island can be accepted for credit from the 1st of April this year.

From Central Kiribati {pronounced "Kirry-bass"}, T30DP is signing T30DP/T31 from Kanton Island now. He is active on 20m only and has been worked on 14005 kHz CW around 1200 UTC. He is expected to be active for "a few weeks".

And from Reunion Island, F6EDF was planning to be active as FR5AK or FR/F6EDF from the 1st until the 19th of January, also on 20 metres only.

Now news of a special event station,

And since 1996 is the 50th anniversary of the International Short Wave League, ISWL, GB50SWL will be on the air throughout the year. Anyone hearing or working the station who wishes to receive a special QSL card should either QSL via the bureau or direct to David Beale, G0DBX, whose address is correct in the RSGB Call Book.

We know of no rallies before the 21st of January.

Now for the HF contest news:

The ARRL RTTY Round-up is taking place this weekend, the 6th and 7th of January. Brief rules are on page 23 of the January RadCom.

Next Sunday, the 14th of January, the RSGB Affiliated Societies Contest takes place on 80 metres CW between 1400 and 1800 UTC. The rules were published in last September's RadCom.

Next some VHF contest news:

We know of no VHF contests this weekend, but the RSGB 144MHz CW contest takes place next Sunday, the 14th, from 1000 to 1600 UTC. The rules can

be found in last September's RadCom.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Tango and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

And now a review of propagation in 1995, which has been compiled by Charlie Newton, G2FKZ, and Neil Clarke, G0CAS:

During the past year the real value of the 50 MHz band has been shown, both in the tropo, ionospheric and sporadic E fields. Although we are still awaiting licensing for unattended operation, in order to extend tests over the 24 hours, the present weekend tropo tests each hour over a 290 kilometre path from G4IFX to G2AHU have clearly shown that descending cold air at night inhibits tropo-scatter propagation, while warm air and even light rain have no such effect. The tropo tests by G4UPS in Devon and G3CCH in South Humberside, a 350 kilometre path, are continuing and giving a reliability of 93 per cent at 0900 hours daily.

Field Aligned Irregularity types of propagation have been reported from many parts of the world. JE1BMJ has sent us reports of over a thousand contacts covering all the Japanese call areas. Beam headings were always northerly, much like aurora, with much crumbled signals, but are only reported during the sporadic E season.

It is known that around sunspot minimum times multi-hop sporadic E improves, but this year some of the openings were exceptional. On the 21st of June to Texas, the 3rd of July to New Mexico, and on the 7th of July the most outstanding opening of all, with contacts over 7,000 kilometres and with the band open up to midnight for some stations. The contact from GM4ILS at Elgin to Minneapolis was outstanding, as the path passes near the southern tip of Greenland, an area not well known for sporadic E.

The HF band reports of the ITU beacon project have shown that during the afternoon periods the LN2A station in Norway operating on 5470kHz to 10407kHz are 100 per cent reliable, and the best frequency for station VIP in Western Australia is 8521kHz with 100 per cent reliability around noon. During the last minimum in 1986 ionospheric daytime critical frequencies declined to around 5.7 MHz. At present they are around 6.2 MHz, so it would appear there is still some decline to come.

The SOHO - Solar and Heliospheric Observatory - satellite was launched on the 23rd of November. It will be stationed at a Lagrangian point, a sort of gravitational equal point between the earth and the sun, about 1.5 million kilometres from the earth. It will prescribe a 600,000 kilometre orbit so that it can observe the sun 24 hours a day, every day. Its main job will be to investigate the sun's interior workings. It is hoped that it will be able to throw light on what the sun's interior is like, by recording "sunquakes", when the sun rings like a bell. It will also study many aspects of solar wind, it is hoped to provide

answers about auroras, and disruptions to the ionosphere.

During the year the Ursigram service that provides all our solar data has undergone a major change. All the participating observatories have changed over to the Internet e-mail system, which caused us some problems. We regret the upset in service recently but hope that with the changes now in hand this will soon be behind us. There has also been a budget problem in the United States which has resulted in the delay of some data reaching us.

Many people are asking when the solar minimum will occur. Well, remember all the forecasts about cycle 22 up to now have be way out, but for what it's worth, it looks like the smoothed minimum for spots will occur about June this year, with a smoothed count of about 6. The minimum for solar flux is expected to be higher than previous minima: about 71 units, and is not expected to occur until about February 1997. However, we are certain about one thing - cycle 23 has definitely started; a bipolar spot of reversed magnetic polarity was observed on the 12th of October in region 7192 and confirmed by many observatories. Previous cycles have taken about a year to show an upward trend from the first sightings.

During the year we were able to get data from the new WIND spacecraft, which over time will be of considerable use. We receive data on solar wind speed, particle density and magnetic orientation. When the wind is Bz south, that is magnetically southerly orientated, it couples with the earth's northerly orientated magnetic field, and this is when disturbances and aurora mainly occur.

And now this week's solar factual data:

First we can announce that Neil Clarke, G0CAS, who produces this solar information, is now on Internet and that the daily solar packet service started again at the start of the new year. His e-mail address is contained within the packet bulletins. We hope that this will also help us to provide a more comprehensive report for GB2RS.

The period from the 18th to the 31st of December saw solar activity at very low levels and the geomagnetic field quiet to active. Sunspot numbers increased from zero on the 18th to 40 by the 26th, but then gradually declined to zero by the 31st, with a mean of 20. Solar flux levels increased slightly from 69 units on the 18th to peak at 76 units by the 29th with an average of 74 units. No solar flares were reported. Electron fluence remained at moderate levels until the 26th, increased to high, and then declined to moderate levels by the 29th. X-Ray flux levels remained at A1.0, but did increase slightly to A3.0 by the 29th in response to the increase in sunspots and solar flux. The average was A1.2 units. The 90-day solar flux average on the 31st was 75 units.

The geomagnetic activity has been quiet, with levels down to only Ap 3 units on several days, but it did increase to active levels on the 24th with an Ap index of 22. A sudden impulse of 38 gammas was recorded at

Boulder on the 31st, with an average of Ap 7 units for the extended period.

I'll repeat the figures:- spots - 20, flux - 74, Ap index - 7, X-Ray flux - A1.2.

Once again, no ionospheric data is available this week, due to the industrial unrest in France and the Christmas break.

And lastly the solar forecast.

This week, with the quiet side of the sun rotating into view, solar activity is expected to be at very low levels. Solar flux levels are expected to decline slightly from around the mid-70s to the low-70s. Geomagnetic activity is expected to be at quiet levels for most of the week, but could increase to active levels towards next weekend. Ionospheric MUFs for the south during daylight hours are expected to be about 20MHz and the darkness hour lows about 7MHz. Northern levels will be about 2 to 3MHz lower than for the south. Also, levels may decline towards next weekend, due to the expected higher levels of geomagnetic activity.

And that's the end of the solar information.

215. Re: Morse code exam symbols

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDKo0C2.9I8@netcom.com>
Source record: 232787

In article <9601041416.AA22291@bns101.bng.ge.com> socci@bns101.bng.ge.COM (Vincent Socci ph2828) writes:
-I'm a no-code tech, but I am working on the upgrade.
Congratulations on getting your tech lisence, and good luck with the upgrages

-1) What symbols do I need to learn to pass the 5wpm and 13wpm
-exams? I know I need letters and numbers, but what about
-punctuation and CW symbols?

The exam will include the letters, numbers, some punctuation (period, comma [often between city and state], slash [usually in a callsign], and questionmark) and prosigns (BT, AR, SK).

-3) What are the specs for the code that is used in the 5wpm and
-13wpm exams?

Contact the VE team where you will be testing; they should know. Ours (an ARRL team) uses the standard ARRL exam tapes.
-Tone frequency?
If needed, most teams can change this if they are given advance notice to make up a tape
-Spacing?
ARRL uses Farnsworth, with 18 WPM characters sent at 5 or 13 WPM
-Words or random letters?
Most teams will use a message that is part of a QSO, so it is like one chunk of a conversation.
-dah to dit time ratio?
Standard 3-1 CW
-How long is the test transmission?
We have a 1 minute practice session with about 5 minutes of code for the test. 5WPM tests are around 7 mins long, since it is hard to have a meaningful message in 25 words that include all the required characters
-Are we given time to clean up our copy after transmission is complete?
We give a minute or so to do that; once we hand out the questions, you can't write on your code copy sheet, since you might get some of the missing info from the questions. We also don't allow copying dots and dashes and translating them after the test is over.
-How many mistakes are we allowed?
For the questions, you must pass at least 7 out of the 10. They are either multiple choice or fill-in-the-blank questions, depending on the VE team, usually asking for stuff like callsigns, equipment, weather, bands/states worked, etc.
You can also pass with one minute of perfect copy (25 chars for 5wpm, 65 for 13, numbers, punct, and prosigns count as 2 chars each, spacing doesn't count).

-As you may be able to guess, I've never taken a code exam yet,
-so I'm looking for all the insight I can get.

You might try to take one for practice, just to get the feel of it (and you never know; without the pressure of doing it for real, you may do a lot better than you expected). I also recommend trying out one speed faster than you plan to take (except for 20WPM, of course). Again, you may surprise yourself and pass; however, after listening to 13, the 5 will sound slower than usual...

Good luck on the code test.
/mike

We have an 87 Subaru wagon, 4x4. I operate 50 watts on 2, 40 watts on 440, and 50 watts on 6 meters. I have also at times operated 100 watts SSB on 40 m and 10 m mobile. The 2/440 antenna has been alternatively located on the roof or at the left rear corner of the car. A ball mount is located at the right rear corner of the car and is used for either 6m, 10m or 40m antennas.

I have had zero problems with RFI, either caused by the car or created to the car electronics.

This makes lots of sense.. Let's do some math here.. Say they purchased
two brand new mobile antennas at $60 a piece, and/or purchased a mobile
radio for cross-band repeating such as another person suggested at $600,
this adds up to $720.

Two cellular phones at say $40 a month, $450 startup fees, and 20 minutes
5 days of the week at $.25 a minute comes up to $2600 a year just for
phone calls, and after 5 years this is 13000 + 4800 + 900 = $18,700.

Yeah, what was I thinking, go cellular!

There is a mod to open up the RX and TX from about 45Mhz to about 65Mhz.
It can be found on Tapr (I think).

I would be interested in a mod. to get more TX power on 6m!

HAMFEST/COMPUTERFEST CALENDAR 1995/1996 - NORTHERN ILLINOIS
last updated December 31, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@att.com. Thanks to Dennis Dale and ARRL for providing information.

JANUARY 1996

Jan 21 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

Jan 28 (Sun) - Wheaton Community Radio Amateurs hamfest. The Odeum exposition center, Villa Park, IL 8am-2pm, admission $8. For info call (708)545-9950. Adv tickets are $6. For adv. tickets write WCRA, P.O. Box QSL, Wheaton, IL 60189 Very crowded, somewhat overpriced indoor hamfest.

FEBRUARY

Feb 18, Sunday: Rock Island, IL - Davenport Hamfest, Info, SASE to Kent Williams, 4245 10th St., East Moline, IL 64244. tel (309)796-0718.

Feb 25 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH

Mar 24 (Sun) - Computer Central, Harper College (see notes at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur Radio Society hamfest 96. Info, call Lloyd Sherman, (815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Info: Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL 60044, tel (708)234-4124.

APRIL

April 21 (Sun) - Moultrie ARK, Arthur, IL. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MAY

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 1, 2 (Sat & Sun) - Starved Rock RC, Princeton, IL. | Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, | with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun) - Six Meter Club of Chicago, Willow Springs, IL. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922.

Jun 30 (Sun) - Computer Central, College of DuPage (see | notes at the end of this article).

JULY

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: * Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. | RadioFest96. Holiday Inn Holidome and Convention Center, | 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, | (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 | Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, | 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria,

IL 61612-3508, tel: 309-694-2649

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

It is best to ask the FCC that one. But, you may request another
copy of your license, THEN change your call. Still, best to ask
the FCC (well, whenever they start working again).

> Mike KB0JGS

:-) Hello Mike, I also have the HTX 202 and had the same problem. I took
it back to Radio Shack and they sent it to wherever they send radios for
repair. About 2 weeks later the radio came back and they said that a
couple joints came loose inside the radio and they resoldered them. It's
been fine ever since. If you have had yours for over a year, the warranty
may not be good. They can tell you the rates charged per hour...there
would not be any parts involved. Hope this helps. Let me know how it
turns out. 73.

Does anyone know if ACC (Advanced Computer Controls), makers of
the RC-85 and RC-850 Repeater Controllers are still around? Our
club has an RC-850 and we were wondering if there has been any
further firmware upgrades since v3.5 (and v2.0 for the DVR).
Cupertino Directory Assistance doesn't have a listing for ACC
anymore though. Did they move, or are they a "silent key"?

Thanks for any info,

: I use some sort of shorthand to write fast enough?

: 73
: Vince

The most important thing to remember about learning code is that if
you do NOT have difficulty in copying, then you are not learning.
The speed that you are practicing with should be a couple of WPM
faster than your target speed. If you find yourself copying almost
100 percent, then increase the practice code speed a couple of WPM
more.
You will find that as you improve, you will be listening to a char-
acter while you are writing the previous character (or characters).
The better you become, the farther behind your writing will be.

235. SIMPLE SIMPLEX REPEATER....HELP

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-04 00:00:00 UTC
From: tcmedlin@cris.com
Message-ID: <4cf79j$559@spectator.cris.com>
Source record: 232879
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I recently built the simple simplex repeater as described in 73 Amateur Radio Today, nov 1995 issue but i have one problem that i need help resolving. if the receiver receives a signal for about one half second or less, the simplex repeater keys up for the entire 20 second period then drops out. any received signal more than about a half second operates it correctly. example: if the receiver receives a signal for 5 seconds, after the rec signal drops, it then retransmits this signal for 5 seconds and then resets or drops out. it is only the very quick keying pulses that lock this thing up.

the repeater is based on the ISD1000A voice record/playback IC which can be found at radio shack and about 30 simple parts. this chip is designed to record a maximun of 20 seconds.

there are 2 rc delay circuits which i have tried to adjust but this does not seem to help. I dont think the problem is power related as i have a good supply, and plenty of filtering and bypassing on it.
If anyone can help, please email me at tcmedlin@cris.com

thanks,
Tom WA5KUB

I am the bully? That is a hoot.
You are the name caller.
Your response to my challenge to meet on the air was to put me in a
kill file. How come? Afraid that you cannot think on your feet, afraid
you will be at a loss of words when you cannot use name calling.
Do you always need to have Nancy Webb at your side to talk.

I agree...the folks at K-Comm have always been more than helpful, and
willing to special order things if necessary. And besides...if you like
good Mexican food, they're just down the road from the Alamo Cafe ;) .

BTW, they just moved -- they're now located on Gulfdale (just east of
US 281 N and south of San Antonio International Airport) on the north
side of town.

I couldn't believe I had this issue of 73 right in a small pile
at my fingertips. Your description of the problem plus a
perusal of the schematic makes me suspect some "squirrelies".
I note the COS input line is bypassed with C3, a .22 uf
capacitor. Is this in place and is it close to U4? If it is,
I recommend the following:
-Try installing .1 or .2 uf capacitors physically close to pins
4&5 of U3, pins 9 and 10 of U3, and pin 27 of U1.
-I don't see it in the circuit but all your IC's, especially
the logics (U3 and U4) should have the VCC pins bypassed with a
1 to 1 uf or so electrolytic mounted as close to the IC's as
possible and with as short a connection to circuit ground or
the IC ground as possible. I'd suggest this as your first
priority.
-You may also be experiencing RFI from your attached
transceiver. It probably should be mounted in a good rf-proof
box with incoming and outgoing wiring bypassed and/or choked
with ferrite shells and other RFI reducing techniques.
Good luck with the project. Hope some of this helps!

>and at his age has probably lost at least 50% of those he was born with

FACT: a newborn is born with 3 time more brain cells that a adult.
Therefore, a "normal" adult has lost 2/3's of the brains he was born with.
In Waynes case that would mean poor old Wayne has lost 5/6's of the brains
he was born with, as per your description.

I like the old boy, really I do. Maybe he sold turn 73 over to me. I'll
turn it back into the mag it once was in 1977!

Only to those living in the particular area that those
prefixes are assigned to. Any 2-letter prefix with "H"
in the second position (AH#, NH#, KH#, or WH#) are
reserved to the "Pacific" area. For example, AH2 is
Guam, KH8 is Samoa, etc.

Similarly, those with "P" in the second position are
reserved to the "Atlantic" area. (Even though all numbers
have not been used.)

254. SIMPLE SIMPLEX REPEATER.....HELP

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-05 00:00:00 UTC
From: tcmedlin@cris.com
Message-ID: <4ckdsh$pjc@spectator.cris.com>
Source record: 232648
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I recently built the simple simplex repeater as described in 73 Amateur Radio Today, Nov 1995 issue. I have a bug and need help with ideas which may correct the problem. this simplex repeater is built around the ISD1000A voice record/playback IC that is available at radio shack. It has a max recording/playback time of 20 seconds. there are only 2 other simple flip-flops and a few other parts. This repeater should receive any transmission up to 20 sec, then rebroadcast that. It does that and the audio sounds good. Now here is the problem: if any received signal comes in for about one-half second or less, it then keys up the transmitter for a full 20 seconds before it will send the EOM end of message reset. this is not good because a short static burst or quick keying of the mike will lock it up for 20 sec. It functions normally of any signal over 1/2 second and up to 20 seconds. I dont think it is RF because I can manually key it up by manuall changing the voltage on the COS line and it still hangs up for 20 seconds. Does anyone have any ideas? Please email me if you can help.
thanks,
Tom, WA5KUB

>5 days of the week at $.25 a minute comes up to $2600 a year just for
>phone calls, and after 5 years this is 13000 + 4800 + 900 = $18,700.
>
>Yeah, what was I thinking, go cellular!

Wow, Walter, I'm glad I don't have your provider. Lets run some numbers again. $20 a month for each of two phones is $480 a year. No startup fees. $0.20 a minute for 20 minutes a day 5 days a week is $40 a week for the two phones, or $2000 a year, or $10,000 for 5 years.

Yeah, no bargain, but lets look at the repeater again. Two mobile rigs at $500 each, or $1000. Forget the cross-band repeater, the coordinators won't coordinate it. So you're looking at a regular repeater, typical cost $2,800. And then there is site rental at $450 a month (including power) for a good site, a phone line for the autopatch at commerical rates of $89 month. So your first year costs are $10,268, and after 5 years you're up to $36,140 not counting all the maintenance and/or equipment replacement cost you may incur (cellphones are free on a one year contract, so they're never out of warranty if you get a new account every year).

Looks like to get the same functionality, you'll save about $26,140 over 5 years by going with the cellphones. Of course you *can* split the repeater costs with a hundred or so people via a club, and that puts your 5 year amateur costs down to around $1720 for the pair. Doesn't look like private repeaters are a good deal, but joining a club with a good coverage repeater may be just the ticket.

Steve
according to the form 610V I have here you are out of luck on the KH6 call if you don't live (or have a mailing address) in Hawaii UNLESS it was a former call that you or a close relative held. So it looks as if you can go for either call. And in Gate 1, since you once held the calls, regardless of your license class. Go for it!

Good luck.... with the FCC shutdown there's no telling WHEN the gates will open.

Wayne Green has given much to Amateur Radio through his years. I read him carefully. He has bias, but so do I. I learn from his viewpoints even when I disagree with them.

He has expressed some ideas in print lately that seem off the wall to me. But the "less than charitable" comments to this post are equally off base. Read -- or don't read -- Wayne Green. But don't bash him! NSD is still with us and still writing. More than many who've given up on Amateur Radio.

Just my thoughts.

>pryack@west.net
>W1ETH@K6TZ.#SOCA.CA.USA.NOAM

Hi Paul

I purchased RSs DSP, which is about the bottom of the line as far as DSPs go. At first I was frustrated with the unit and didn't think much of it, however, just moments before I was going to return it I was in a QSO on 6-meters with a station that was hitting me with less than 1 s-unit when the noise level from local electrical and medical machines rose to over 5 s-units, using this cheap little DSP I was able to knock out the noise and still continue my QSO. Needless to say, I still have the unit.

However, it does not knock out all line noises on SSB and functions best for filtering out everything except a CW signal you are interested in.

Would I part with it? NO!
Would I recommend it to someone? Again NO! There are much better units than RS on the market that perform much better.
Would I recommend owning a good DSP? Absolutely!!!

Gary

)This makes lots of sense.. Let's do some math here.. Say they purchased
)two brand new mobile antennas at $60 a piece, and/or purchased a mobile
)radio for cross-band repeating such as another person suggested at $600,
)this adds up to $720.
)
)Two cellular phones at say $40 a month, $450 startup fees, and 20 minutes
)5 days of the week at $.25 a minute comes up to $2600 a year just for
)phone calls, and after 5 years this is 13000 + 4800 + 900 = $18,700.
)
)Yeah, what was I thinking, go cellular!

Either cellular is more expensive in your area, or you haven't priced
it lately. Around here you can get cellular for anywhere from $10 to
$30 a month, a free phone and NO setup fees. At the $30 a month rate
you get 30 minutes of peak time and a bunch more off-peak. Past that
calls are typically $.35 a minute.

Still not cheap, but not nearly so high as you've suggested.

The two services are not interchangable, regardless. I have and use both.
I make business calls and such from the cell phone while commuting
as needed, and chat with friends on the local repeater. We have enough
repeaters around here that there's really no problem finding an available
one during the commute hours.

Your prediction has already come true (so its worthless as a
"prediction"). There are practically no 68k Macs in production, everything
is PowerPC. There are no compatibility issues with PowerMac clones so you
might as well buy from Power Computing or Radius. IBM hasn't bothered to
port OS/2 yet, and Microsoft hasn't ported NT.

> (What you won't be able to do, according to Apple, is read 400K or 800K Mac
> diskettes on these new systems. They'll have PC-style floppy
controllers only,
> since part of the idea of the PowerPC Platform is to get away from the
> proprietary chips that Apple has such a hard time obtaining.)

Custom chips are often easier to get than "standard" parts because you
contract for them in advance and can't back out on their purchase after
that fact. The part everyone is having a hard time getting is the PowerPC
CPU, and all the fabs are running around the clock.

You might have noticed a recent blurb where Apple has seeded money to a
startup to clone the PowerPC CPU. While Apple already owns the rights to
build PowerPC CPU's it looks to me they are acting to ensure their future
supply and at the same time see if they can leapfrog the CPU designers at
IBM, Motorola, NexGen, and Intel. Apple sounds like a healthy company to
me.

265. This Week in Amateur Radio #145 (for air through 1/12/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-05 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xNLlmrq.sanderman@delphi.com>
Source record: 232659

Here is a summary of news items covered on edition #145 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 12-Jan:
-
1. DOVE OSCAR 17 Satellite Fails Again, Problem May Be On-Board
2. WD4ASW KO-23 Satellite Gateway Node Back in Operation
3. License Applications Pile Up as Shutdown Keeps FCC Closed
4. Congress Reaches Agreement on Telecommunications Law Reform
5. Apple Experiences License Renewal Problems - with Microsoft
6. Well Known Australian RTTY DXer Succumbs to a Heart Attack
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. "The RAIN Dial-up" from Chicago
9. Kansas City Broadcasters Test New Emergency Alerting System
10. "This Week" Moves to Telesat Canada Anik E2 Later This Month
11. Weekly Propagation Forecast
12. New DX Program to be Carried by Shortwave Station
13. "Amateur Radio Newsline" - Edition #960 from Los Angeles
14. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" awaits the signing of a contract with the
new satellite uplink carrier. "This Week in Amateur Radio" should
return to satellite air later this month. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,

at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

I can tell you when code will be done away with!
When ever sales generated from the no-code licence start to drop, the
BIG THREE and the ARRL will see that the code is lowered or done away
with so they can drum up sales of HF equipment.

My friend john sent in 5$ for Wayne's Super fast morse code learning program. It stated that with this info you could pass your 5wpm code test with an hour of study. Well the info john got back in the mail, stated just to write the dits and dah's down, the decode them after the tape was over! Well John sent this stupid thing back (it had a money back guarantee) but still has not received his 5$ back.

Dear Dave Bushong,

Why would you, after leaving a nice reply message to a new person, take a pot shot at Burt Fisher? You, and many other people, do not seem to recognize what Burt is really saying. Burt never insults people directly...at least I have never seen him do so. However, he does make observations about the ham community at large. Mostly he takes examples of some real dumb stuff that everyone has experienced being a ham and showcases it. If someone gets insulted, guess what? That person is probably guilty of the example that Burt pointed out.

Every now and then, Burt lobs his "Hams are boring" bomb. Of course, someone takes exception to it and the debate is off and running. In the most part, however, Burt is correct in saying "Hams are boring." THEY ARE! Personally, I can only talk so much about different antennas, rigs, weather (unless it has to do with snow skiing) and so forth. If you dare to have a meaningful conversation about O.J., school systems, child rearing, politics (city, county, state, or federal), Rodney King, gangs, metal detectors, or some sort of social ill that might not be quite "PC", ALOT of hams will duck for cover.

I think Burt is a refreshing breath of air and I wish he was my neighbor. We would probably get along great!

I have the option of applying for previously held call signs
WA4MPD or KH6HCR.

The WA4MPD call was issued back in the 1970s and the KH6HCR
call was, at the time, an additional station license later
changed to my primary station call.

I am currently licensed as KD4RG but would like to apply either
for the OLD WA4MPD or the UNIQUE KH6HCR.

Comments and suggestions would be greatly appreciated.

Reasons for and against each of the three calls.

Thanks and 73s

de KD4RG

>can have a high tech "CB" or car phone to communicate around the family.

True.

>sometimes I hear xyl's that never ever use the radio for anything other
>than paging their husband, and vice versa. I thought thats what GMRS

I've seen the same thing. We call it the "milk and bread" show here. There is a husband and wife who call each other exactly twice each day, say the same things ("I'm getting to work now", "I'll be home in a few minutes", etc.) and because they work different shifts, they use the radio to do what cellular phones were invented for. This is not ham communications.

>alltogether. I think the only thing that keeps HF from turning into
>another Childrens Band are the harder written tests and especially
>the code requirement. To appreciate operating code, you have to be

How come no one has stated it that well before??!!! That's what it's all about: love of the hobby! In fact, "amateur" has its roots in the latin word for "love", meaning that you do it because you love it, not because you get paid to.

> Oh well, enough of the soapbox for today. Can someone tell me a
little
>more? is this a "newsgroup" on the internet. I did not get into using
a

Sure can! Yes, this is the real thing. You will get all kinds of advice here, but remember, you usually get what you pay for. Generally people will qualify what they say here with "I'm not sure, but..." or "I tried that once and I found out that..."

One word of caution: take most of it with a grain of sale. For example, a guy named burt fisher will followup to this posting, and he will take a few cheap shots at me. If you post, you have to be able to

ignore assholes like that. But please, don't stop posting, whether it's questions or answers! Most of the people here are full of information (or full of questions that you might be able to answer!).

I don't agree with your comparison between K1MAN and ARRL.

One major difference is ARRL limits its use of wide bandwidth SSB
transmissions to twice a day and usually no more than 5-10 minutes tops.
I personally would encourage K1MAN to limit his time similarly (i.e., 10
minutes/twice a day) on the crowded HF voice bands.

>All the letters and numbers, all punctuation (, . /) and
>prosigns (AR, SK, BT).

don't forget the "?"...KN's not on the test.

>>2) Any general tips on the best way to learn and improve speed?

send the character fast enough that you can't count parts, but put enough space between 'em so you can learn to write it down. gradually increase speed and reduce time between characters.

try to listen to on-air code as well. copy what you can.

>>ears). Should I be writing down letters as I hear them, or should
>>I use some sort of shorthand to write fast enough?

shorthand is OK if you know it...you want to get where you can copy behind, and i suspect you'll need to be there before shorthand would be effective.

>I've seen numerous people take laptops into test sessions, too.

can be cumbersome..check with the VE team first to find out if there's any problem with bringing along the computer.

>>3) What are the specs for the code that is used in the 5wpm and
>>13wpm exams?

the ones i have are about 18 WPM character speed with spacing for 5 and 13 WPM tests. 20 sounds like straight 20 to me.

>>How many mistakes are we allowed?
>
> All exams require a minimum passing score of 70%.

or you can get 1 minute of solid copy...with numbers/punctuation counting as 2 letters, you need 25 for 5, 65 for 13 and 100 for 20...

I just found out that 4.15 has problems, also.

The mouse doesn't work and some screen color changes cause the menu at
the top of the screen to slowly becom overwritten. Using black seems to
be the major culprit.

I still think it's a great program.

Dave Bushong (kz1o@ix.netcom.com) wrote:

: You are right. It's been worse the last year or so, since posting
: privileges have been made available to more and more of the general
: public. But this newsgroup isn't unique - many of the other ones are
: the same way. That's why mailing lists - "reflectors" - are becoming
: more popular. People don't tend to be as rude when they know that they
: are e-mailing a message to dozens/hundreds, whereas here, it's more
: like spraying grafitti on a wall, with no recriminations.

Not necessarily true. There was a HAM-L mailing list that was even worse
than this newsgroup. Maybe 1 percent of what was posted was worth reading.
Too bad, because it could have really been a good forum. I dont know about
its current state, as I and many others quickly unsubscribed when it went to
hell.

One advantage of a list, though, is that the listowner can delete an
individual subscriber for any reason, whereas we have only killfiles on the
Usenet groups. And, regardless of the empty threats made by some people
mailing to an individuals postmaster, I doubt that very many ISPs will
revoke the account of an offender simply because he acts like an ass on
the newsgroups.

Of course, most of the lists I subscribe to handle subscribe/unsubscribe
requests with an automated system, so anyone who was dropped could
easily resubscribe.

Message-ID: <4ck27s$aj@cronkite.seas.gwu.edu>
Source record: 232825

From the home office in Grand Rapids Michigan, a man who puts the Big in Big Apple.....

Top Ten ARRL Resolutions for 1996

10. Prevent FCC from issuing new callsign, BRTFSHR1

9. Not only broadcast illegal tones, but have Snoop Doggy Dogg create ARRL rap to use in place if W1AW call.

8. Increase membership costs to give staffers more free calls to Psychic Friends Network.

7. Ask Congress for power to execute all who disagree with ARRL.

6. ARRL, CBS. CBS, ARRL. Make Westinghouse only supplier of Ham gear.

5. Use new membership dues to help OJ hunt for the real killers.

4. New bylaw: All participants in Field Day must be nude.

3. Allow WA4JTK to take over ALL frequencies and become frequency controller with new ARRL frequency jamming devices.

2. New mascot, Two toed sloth

And the number on 1996 ARRL resolution:

1. Turn hams into mindless zombies with stupid new self serving ideals.

He instead stereotypes and then insults large groups of people.

> However, he does make observations about the ham community at large.

But he never learned that you can attract more flies with honey than you can with vinegar. One can only assume that his aim is to alienate, not effect change. Enough of that noise.

> If someone gets insulted, guess what? That person is probably guilty
> of the example that Burt pointed out.

So if, say, someone were insulted by a statement that "Jews are moneygrubbers", it means they are probably guilty of being moneygrubbers? Couldn't it mean that they're upset with being unfairly stereotyped?

> Every now and then, Burt lobs his "Hams are boring" bomb. Of course,
> someone takes exception to it and the debate is off and running. In
> the most part, however, Burt is correct in saying "Hams are boring."
> THEY ARE!

What's boring to one person is interesting to another. I can't say I appreciate Burt's plastering his idea of what is and isn't "boring" or "useful" or whatever all over this newsgroup, ad infinitum. By now most of us know where he stands. I wish he'd just shut up already.

Don't like contesting? Don't contest.
Don't like NTS? Don't handle traffic.
Don't like hams? Get out of the hobby, or realize that not all hams are alike, find some you do like, and HAVE FUN.

Maybe Burt finds flamebaiting hams to be fun, which is fine. I don't have a problem with that. But it means the place he has earned in hundreds or even thousands of killfiles is well-deserved.

>rather thin 73 magazine ??

Wayne is a frightened old man. He's staring the Grim Reaper in the
eye, and he's grabbing onto any and every quack nostrum he can find
to help him live longer. In the process, of course, he's also come under
the influence of every other type of quack out there. (I suspect that
they exchange sucker lists.) Remember also that Wayne distrusts, and
in fact actively hates, the government after his run ins with the IRS.
He's naturally vulnerable to anyone who claims that their wonderful
invention is being suppressed by the government or the medical
establishment. (And there's often enough of a grain of truth in that
paranoia to make their other claims seem plausible.)

Add to that the fact that Wayne isn't growing any new brain cells,
and at his age has probably lost at least 50% of those he was born
with, and you have someone who's likely to chase rainbows in search
of the fountain of youth and miracle cures.

Vincent Socci ph2828 (socci@bns101.bng.ge.COM) wrote:

: 1) What symbols do I need to learn to pass the 5wpm and 13wpm
: exams? I know I need letters and numbers, but what about
: punctuation and CW symbols?

In addition to all letters and numerals, you are expected to
know period, comma, question mark, slant bar, and the prosigns _AR_,
_BT_, and _SK_.

: 2) Any general tips on the best way to learn and improve speed?
: The CP program is excellent in its way of grouping letters in
: it's beginner menu, but I still have difficulty in hearing,
: decoding, and WRITING DOWN a letter before the next one starts.
: I also occasionally misidentify "dahs" as "dits".

This is all normal in the early stages of learning code. Speed
improvement comes from repetition. Actual operating is the most
pleasurable way to get your "reps", but any method (tapes, computers,
etc.) will work. Eventually you will not have to think about the
translation...the sound *becomes* the letter (and groups of sounds
become words).

Lots of the other questions are not really important. Don't get
bogged down in unnecessary detail. But here are some answers anyhow:

: 3) What are the specs for the code that is used in the 5wpm and
: 13wpm exams? i.e.:

: Tone frequency?
Usually 700-900 Hz
: Spacing?
ARRL exam tapes use character-speeds of 18 wpm for the 5 and
13 wpm tests with increased letter and word spacing.
: Words or random letters?
Usually the test is a "standard QSO" format.
: dah to dit time ratio?
3:1
: How long is the test transmission?
Around 5 minutes...maybe a little more for the 5 wpm test.
: Are we given time to clean up our copy after transmission is
: complete?
Not long, usually. Maybe half a minute or so.
: How many mistakes are we allowed?
Answer 7 out of 10 questions correctly or have one minute
(continuous) perfect copy.

: As you may be able to guess, I've never taken a code exam yet,
: so I'm looking for all the insight I can get.

Actually, the test formats and questions are so standard now that you really don't need much insight (or even proficiency, for that matter...but that's another story.) Just learn the code then get lots of practice (repetition is *the* key. Tricks can help you *learn* code, but only repetition and practice will improve your speed and ability.

Good luck.

You can also upgrade the Explorer antenna. There is a motorized antenna mount on the market now, advertised in the ham mags. I bought one, and put it on a magnet mount base, and put it on top of my pickup. A switch in the cab tilts the antenna over so I can get in my garage.

Why don't you jus call Kantronics and buy one? Probably about $30.

I think that would be better than copying the software and definitely more ethical.

Just my 2 cents.

Pretty Cool but there are a lot of hams out there that do not use the net for such a flamboyant pulpit of their intestinal knowledge. I've been a ham since 1958, but have never met any hams (with ham etiquette) that were putting down novices or hams with lesser understanding that might be new to the ham community. I always thought of hams as helping, kind, yet experts in their own right. If we all use the net as a classroom to exhibit our exemplary knowledge, then where do the new hams, regardless of what area of the hobby they choose, get their experience. The only thing that comes from exhibitive intestinal guts is a lot of crap! Anyone for a dissertation of Direct-mapped, fully-associative, two-way set associative or four-way set associative computer cache architecture and how it applies to an internet server?

I wasn't making reference to any one posting with regards to "trashing". I just think there are so many positive elements that surround the amateur radio hobby that fall fay beyond that of the technology itself. I don't want to preach, but I find the hobby as a way to put back into society a sense of community. Now I am now referring to community service, but just plain old community. The kind I experienced as a child while walking down the main street in my home town. Now we have no main streets, we have shopping malls. So, my belief is that our society's fabric is torn, and amateur radio helps maintain something that was once taken for granted. Now this has nothing to do with technology or code vs no-code etc. It has to do with a bunch of folk getting together who REALLY want to know how each other are doing.... Doe this make sense? Your comments please.

ACC sold out as of July 25 1995 to LinkCom....they were basically
closed anyway for months before that...

I have a RC850 with V3.8 in it.....the software can be obtained
free at LinkCom's FTP site (ftp.netins.net in directory
showcase/linkcomm/acc). I have docs on 3.5 to 3.8 changes if you
need them...I dont think LinkCom got copies of the manuals..

btw LinkCom is on the Net......you can drop them a line here and
Steve or Alan will be happy to help as much as they can..

Linkcomm@netins.net is their address

I currently own RC850 sn363, two SM100 Shackmasters, and a ITC32

and two RLC 3s from Linkcomm....

I dont think there was an update for the DVR...

From Tad Cook, KT7H
Seattle, WA January 5, 1996
To all radio amateurs

SB PROP ARL ARLP001
ARLP001 Propagation de KT7H

Back from vacation in Bahia, Brazil, your author is tanned, rested and ready for another year of propagation and solar observation. It is currently Summer south of the equator, and it was interesting to listen to the HF bands from PY6LA, with formerly distant stations suddenly local.

In the northern hemisphere it is Winter, and we can expect 20 meters to still be the best band for worldwide communications during the day, peaking right after sunrise and again in the late afternoon. 30 and 40 meters should be good for DX in the late afternoon, along with 80 meters after dark. Low Winter static levels are a good factor for low frequency communications at this time.

Over January look for the solar flux to gradually drop toward the low seventies by the 10th and back to the mid seventies by the end of the month. The only disturbance should be around January 20, caused by recurring coronal holes.

Over the past few weeks average solar flux has been rising, but only a little. Last week was the first period in awhile where the average flux was above the average for the previous 90 days.

Sunspot Numbers for December 14 through 20 were 13, 11, 0, 0, 0, 0 and 11, with a mean of 5. 10.7 cm flux was 69.8, 70.2, 69.9, 69.3, 68.6, 69.2 and 70, with a mean of 69.6.

Sunspot Numbers for December 21 through 27 were 12, 13, 11, 0, 25, 40 and 37, with a mean of 19.7. 10.7 cm flux was 70, 71.2, 72.3, 72.2, 72.5, 74.1 and 74, with a mean of 72.3.

Sunspot Numbers for December 28 through January 3 were 23, 25, 12, 34, 25, 34 and 30, with a mean of 26.1. 10.7 cm flux was 76, 76.4, 75.3, 75.1, 75.1, 74.8 and 80.8, with a mean of 76.2.

Be extremely cautious before making firm plans with these preliminary
elements. A reliable source has told me that the Japanese Space Flyer
Unit (SFU) has had some problems, so the shuttle will almost certainly
have to use a different rendezvous profile to reach SFU. This will
certainly require more propellant. And the OAST-FLYER's flight plan will
probably change. It may be as simple as a higher orbit, but probably
will involve some shifting of the orbital plane for the freeflight period.

Preliminary elements are excellent for calculating the lengths of passes,
look angles, and to a lesser degree adequate for calculating sun angles
and lighting conditions. But always rely on the true post-launch keps
whenever possible.

(I did run the above keps, and it turns out I've got nine excellent
passes for the predicted time. But all in the middle of the night. Now
if I can only delay the mission long enough for SFU's orbit to precess in
to daylight passes ....)

Matt, here is an excerpt I got from this newsgroup awhile back. Hope
it helps. 73, John

.. Remove the top cover And locate a little green wire on the
back of the control panel. Cut the green wire. put top cover back
on. Look in the manual for the power on reset key combo.Tx will
be 138-174 mhz 430-470 mhz. Rx (also do the expanded rx key combo)
112-174 mhz 430-520 mhz.tx and rx in the vhf stuff holds spec great.
tx in the uhf band drops to about 13 watts at 470. rx in uhf is about
5uv @ 12db sinad at 510 mhz!

Does anyone know the power supply voltages for the Heathkit HA-14 H.F. Linear? I am particularily interested in the bias supply voltage. Please send e-mail to eureka@datasync.com

Thanks,

W6SZX

Gary

here we gp again. Hey drew?? is there ahything you can suggest besides something that is illegal?? how would
you feel if someone, like chris, came down and pinned your CB coax?? then you wouldn't be able to work your
illegal CB DX on 5 watts with a 102" steel whip?

get a grip, suggest useful stuff

I have a PK232 tnc which I am having little luck in getting it to run APRS74e. I use PKGOLD as my regular packet communications program. I have tried all of the fixes that I have seen on packet but I still can not get the tnc to communicate with the APRS program.

If anyone has the above combination running properly, I would appreciate it if you could mail me your shutdown.tnc file or mail me step by step instructions on how to get the system working properly.

Thank you.

ARLX001 AMSAT Chairman Browning, SK

ZCZC AX47
QST de W1AW
Special Bulletin 1 ARLX001
From ARRL Headquarters
Newington CT January 6, 1996
To all radio amateurs

SB SPCL ARL ARLX001
ARLX001 AMSAT Chairman Browning, SK

Former AMSAT chairman of the board John W. Browning, W6SP, of Rancho Palos Verdes, California, died of kidney cancer January 3, 1996. He was 71.

W6SP was elected Chairman of the Board of AMSAT in 1982 and led the organization during early Phase 3 satellite development. John was an ARRL Life Member, prominent in many California DX associations and an avid HF operator from Palo Alto and later Los Angeles.

A highly decorated veteran (Legion of Merit with one oak leaf cluster, the Distinguished Flying Cross, Meritorious Service Medal, Air Medal with two oak leaf clusters, the Air Force Commendation Medal with one oak leaf cluster and the Purple Heart), John received the Distinguished Service Medal, the highest peacetime medal awarded in the US when he retired from the Air Force as a Colonel in 1982. Following his retirement, John worked as a consultant to the aerospace industry.

Arrangements are pending. Burial will be in Arlington National Cemetery on a date to be determined. John s family invites donations in John s memory to the Torrance (California) Memorial Medical Center. John is survived by his wife, Myrnie, a daughter and a brother.

Source record: 232705

Hi,

although I am no radio amateur (at least so far), I thought, it would be a good idea to ask a question in this group, where experts might read it.

My problem is:
Listening to shortwave (this also means the ham bands), I get a lot of trouble with TV sets in our house (and to a less degree from the neighbourhood, too). About every 15 kHz, I get a lot of interference by TV when listening to my shortwave radio. DXing is considerably restricted then.
So what could I do? I know that there might be some filters, although I can't find them in any shop here.
Are audio filters, notch filters ... also effective against TV interference? What about preselectors?

If someone might give me a hint, I would be very glad. But please consider that I am not very talented or experienced in constructing devices on my own.

Hoping to get answers
Best 73

Manfred

It's nothing new. I remember a column 25 or 30 years ago where he was claiming that "in less than 5 years time" it will become general knowledge that space aliens have been visiting the earth.

I seriously doubt that he actually believes this stuff. He's kind of like the tabloid press: most people just read it for amusement. I have often wondered if he is even really anti-ARRL, or if he is just like certain unscrupulous TV preachers who are more interested in money than in any ideology.

Not only is Apple a healthy company, but last quarter they sold more computers than any other computer company with Packard Bell being a close second and Compaq coming in third.

Apple is still the most prefered computer in educational circles also. The new Apples will run DOS and windows without a hitch.

According to a 1995 Apple study, Apple's most popular cross-platform system, the Power Macintosh 6100/66 DOS Compatible, has attracted a large number of customers replacing an x86-based PC. In fact, the survey found that the majority of Power Macintosh 6100/66 DOS Compatible customers were either buying their first personal computer, or adding to or replacing previously owned x86-based PCs. At the same time, Power Macintosh 6100/66 DOS Compatible customers spend most of their time running Mac OS software, and buy as many native PowerPC applications as other Power Macintosh customers

As far as Windows95 goes, mac had this type OS in 1985.

There is a rumor that Mac and Hewlett parkard are working on a deal.

Here's a suggestion:

There are many US maps on the Internet. Download one, take it into a draw program and add your own section lines and call sign area numbers. You can get this information at any library that has a copy of the ARRL Amateur Radio handbook.

Hi William,

> Anyone have any information on the new Alinco DRM06 6 meter radio.

I have one of those here. The bands a bit quiet over here, and as you
might have seen in uk.radio.amateur there is a very heated debate over
the proposed repeater network on 51 MHz.

> According to a very informed source there is a mod, but this person would
> not tell me what it is. I would like to know the frequency range transmit
> and receive. To any Net Police out there warming up your flamers. I might
> need a signal genarator and want the radio to do double duty. E-mail me if
> you like.

Simple trick to extend receive range to 40.00 - 59.99 MHz:

1/ Power the radio off
2/ Power on whilst holding in the CALL / CH. SP. button

That's it! To go back to 50.00 - 53.99 just repeat the above steps.
I have done this to my DRM06 and can confirm it works.

There's a hardware mod for extended transmit/receive. I have NOT done this, but have been assured by the Technical Editor of a respected UK ham radio magazine that it's ok. The coverage will become 40.000 to 72+ MHz, though I understand that the power falls off at the top end, and the receiver performance is lousy on the (UK only) 70.000 to 70.500 (4m) ham band:

1/ Remove the front panel (I know that's easier said than done. That's why I haven't tried it yet!)
2/ Locate a pair of solder blobs on the pcb directly behind the display and short them together.
3/ Re-assemble (again, easier said than done).

Hope this helps.

73
Mike
G4KFK
The CQ Centre BBS
Node 1 - 44 1753 595468
Node 2 - 44 1753 593524

Hope this helps. I'll try this mod next time I can get the radio out of my wifes car (or should I say, next time I *GET* my wifes car, hi!)

That was the worst shot at Amateur Radio I have ever herd. I am new to these Ham news groups, but
have read many posts about you Burt. At first I felt that your views were just very diffrent then
most Hams, which is ok, we all have the right to our own views. But that "Guts Joke" was uncalled
for. What is the big deal about "GUTS" Im a Ham, I also was a Cop in NYC for 10 years on the 12-8
shift, till my knee was shot up. Does that mean I have guts? Also before you start yelling that I
am just a No-Code tech, I do believe in morse code, I will advance in class as I learn the theory
and code which I study each day (Not questions and answers either). Also you could have been more
original in you joke telling, that was an old joke, you just added the Ham operator in place of
the origional text.

You are wrong ! Any sales person regardless of who they work for have
the obligation of being as pleasant as possible to all customers.

Being snotty and unpleasant does nothing for customer relations not to mention the company they work for. If they cant be pleasant and helpful then they have no damned business being in the sales field. I am the service manager for an alarm company so believe me I know about customer relations and what some of these ham radio dealers exhibit is far from good customer relations.
Do you like talking to someone who has a chip on their shoulder and who talks down to you ? No, I dont either and if I get those kind of "vibes" I take my business elsewhere.

My opinion is also my own but DOES reflect those of my employer !

360. Canadian radio frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-07 00:00:00 UTC
From: lagerway@hk.linkage.net
Message-ID: <lagerway-0701961117290001@ip813.hk.linkage.net>
Source record: 232592

I'm a photographer living in Hong Kong. I've just purchased a radio transmitter/receiver for triggering my lighting equipment from a UK vendor. Unfortunately the frequency is 418 MHz, a reserved frequency in UK but heavily used here in HK. Whenever a local truck driver makes a call my lights start doing a disco routine. The manufacturer has offered to replace the frequency module with one at 433.92 MHz.

I'm planning to return to Canada in the next year or so, and if the 418 is a cleaner frequency there than 433.92 I may just leave things as they are. I understand that 420 to 470 MHz is reserved for amateur radio in Canada. Do any of you know about 418?

Thanks in advance for any help received. Since this may be of no interest to hams, perhaps direct email is most appropriate.

370. Macintosh Radio Control Beta Testers wanted

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-07 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-0701961319400001@bab00110.slip.digex.net>
Source record: 232602
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

Beta Testers for Macintosh Radio Control Software for Yaesu and Kenwood radios are wanted. You must have a Macintosh (color display required) and a radio with the necessary computer interface, and be willing to test many versions of the software. (I don't have either of these radios, so I am unable to test it out myself)

What will you get out of it? Well, besides the satisfaction of helping debug some shareware Macintosh software, you'll get a free registered copy of the final version, and the ability to provide input to the design, which means the software will have the features you're interested in.

I will also be looking for Beta Testers for Lowe, Drake, Japan Radio, and AOR radios in the future, as soon as I obtain the protocol information and modify the software to support those rigs.

If anyone has copies of the protocols for these radios, I'd appreciate getting a copy, or finding out where I can get the information (is it online?)

Thanks,

Chris
N3JLY

Hitler didn't give up on Germany after WW I either. No, I'm
not saying Wayne is the amateur radio equiv. to Adolph. Just
pointing out that a well intentioned person can actually be
bad for the hobby. What if you were a high school student
interested in radio, electronics and science. You go down
to your local magazine shop and in the rack you see a copy
of "73". You can tell by its cover that it deals with
ham radio. Just what you've been looking for. You take
it home, open it up, and start by reading the intro from
Wayne. Yeah, you think. Hams are kooks. Never mind.
Think I'll take up ancient Babylonian basket weaving
instead. Wayne is hurting ham radio recently. He is
not helping it. Say goodbye, Wayne.

I would just stick with the 418.00 since you will be back in the Americas soon. You may also have more interfernce since this area of the band is heavily used in North America.

Good Luck,

Keith

378. Looking:: Shareware Pgm for Grid Square Work???

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-07 00:00:00 UTC
From: davie@primenet.com
Message-ID: <4cpj20$c9f@nnrp1.news.primenet.com>
Source record: 232610

Hi,

I'm really into Grid Squares. I would like to find a program that is orientated toward this more than the popular logging/contest programs.

I would really like to have something that would keep track of Squares in many different ways and could PRINT GRID SQUARE MAPS showing various conbinations of Squares, Squares contacted, Squares needed, etc. I would also like to be able to see detailed versions of these type of maps on my screen.

Most of the logging programs I have tried just had Grid Squares as an after thought, if they handled them at all. I really need a specialized program. Anyone seen such an item?

Thanks, Dave in Phoenix

And what would you suggest? "Call the FCC?" Yeah, right! A lot of good that's going to do. If you're lucky, he might get a "please discontinue your apparent illegal activity" form letter like they send out to 1KW CB'ers these days. He asked for a solution to his problem and I provided one. If you'd rather play footsie with the guy by "asking him nicely" and waste time with the FCC, go ahead. A carefully-placed pin in the coax will solve the problem...inexpensively and immediately.

Has anyone out there successfully interfaced any of the common Windows
rig control pakages (ProCat, RigWindows, CAT757, etc...)with a Yeasu
757GX? I have not had much luck to date. If so, what hardware interface
did you use and what software package(s) were you successful with.
Feel free to send Email:
Thanks, Carl

Message-ID: <4co55i$bhs@news.continuum.net>
Source record: 232615

You might want to get in touch with Mike, WB2UID,
in New Hampshire (don't know if he has E-mail address).
You can get at least his snail mailing address from the
QRZ casllsign locator site on the Web. Mike had an MAB
running on 75 meters at a New Hamphire Hosstraders
hamfest a few years ago, and it was quite an amazing
little set! The receiver was very good on it, as I
recall.

Another source might be W7VG Vintage Manuals in
Bartlesville, OK. (Gary Gompf) Gary has a lot of
military manuals. His phone number is about as easy as
any for a ham to remember - 1-800-807-6146.

I take that back - I'll bet that there are lots of hams
operating rice-boxes that dont know an 807 from a 6146
from anything behind the front panels of their tiny
little boxes!

73,

Chris, AJ1G
Stonington, CT

Here is the original article I was looking for:

MAURICE WARD AND THE PLASTIC THAT CAN RESIST A NUCLEAR BLAST

by David Levenson

[IMAGE] Maurice Ward of London, England, who was once a hairdresser, has been a recycler of plastics for several years. He has invented a plastic that can resist the heat of a nuclear blast. He calls the plastic "Starlite". It is as stiff as rubber sheeting and is waxy to the touch.

[IMAGE] Starlite has been tested by shooting it with laser beams with enough energy to produce spot temperatures of over 10,000C. Scientists say that nothing should slough off that much energy. The hardiest metals vaporize above 2,000C. Scientists were amazed when a major British industrial lab couldn't damage Starlite with a plasma torch. The same torch can cut through 18 inches of steel.

Scientists are impressed with Ward's invention. No one knows the secret to this plastic except a few of Ward's family members. It is speculated that the plastic contains silicon carbide which is an excellent heat conductor. It is conceivable, scientists say, that someone could create something like this in their home just by combining various non-polymeric materials with flame-retarding chemicals and existing plastics.

Starlite could possibly be used to protect spy satellites from laser weapon or the shields on tanks that could fend off the heat of a nuclear blast. Starlite is also being test for use as a shield on ballistic missiles to prevent overheating when reentering the atmosphere.

The following is a QST

The ARRL says it's going to congress to stop malicious
interference,
the ARRL letter goes weekly on the Internet and an old friend is
coming back. Find out which one on a special extended Newsline report
number 960 coming your way right now!

(*****
ARRL VS. MALICIOUS INTERFERENCE

Topping the news this week is word that the ARRL appears to be getting ready to keep a promise to go the political route to end malicious interference on the ham radio bands. This, in response to the rising tide of unresolved malicious interference complaints filed by the ham radio community. And as a result, an ARRL Executive Committee ad hoc panel has recommended that the League look to Congress for any long term solution.
Writing in the December 26th issue of the ARRL Letter, Steve Mansfield, N1MZA, the Leagues Administrative and Public Affairs Manager says that as a part of the continuing effort by the ARRL to get enforcement action, the League has started to round up support from several congressmen from areas where local hams are experiencing particularly intolerable interference problems. Mansfield says that over the past three years the league has constantly sought action in two cases of repeated and persistent malicious interference. In one case, the local FCC office has been able to at least defuse the situation. But the problem continues in the other with no action on the part of the enforcement arm of the FCC in sight.

(*****
ARRL LETTER GOES INTERNET

The ARRL Letter is going weekly on the internet, but current subscribers to the printed version will only be seeing it once a month. The decision to convert to electronic delivery also means that the Letter will now be available free of charge to any ham who has the ability to access the ARRL Home Page on the World Wide Web or several commercial sites. This includes America Online, CompuServe and GEnie.

The league notes that a survey of subscribers in early 1995 indicated an interest in electronic delivery because information delivered that way will be more timely.
Current subscribers to the printed version of the ARRL Letter will have their subscriptions extended so that they will receive the same number of copies as they would have under the twice monthly mailing. The league is also cutting the annual subscription rate for new mail out subscriptions as well.
A year ago of the Westlink Report ham radio newsletter ceased publication after more than two decades due to declining revenues. With the ARRL Letter going to weekly on the internet and once a month on paper, only Fred Maia's, W5YI Report is left on a twice monthly mail delivered schedule.
The only question left is whether or not W5YI will follow the ARRL and Newsline to the Internet. We posed that question to Fred Maia. He says that he has no plans of going to electronic delivery at this time. Maia is planning to start his own home page on the World Wide Web but he says he is into the printed page to stay.

(*****
NYC HAM CHARGED

A ham recently hailed as one of the nations best known dealers in vintage amateur radio gear has been charged with theft and attempted

bribery. Harold Guretzky, K6DPZ of Richmond Hill, New York was arrested on December 11th after a sting operation allegedly caught him in the act of receiving stolen property that police say he bribed an undercover officer to steal.
According to published reports, Guretzky who was a civilian employee
of the New York City Police Department and who worked at the police radio repair shop was on his job as a repair technician on December 6th when he is alleged to have approached an undercover detective and offered him a $100 to remove five pieces of test equipment stored in the shop.
With the Queens District attorney's and Police Internal Affairs officers present, the transaction took place and was secretly videotaped. Soon thereafter, Guretzky was placed under arrest with the stolen equipment in his possession.
Ironically, Guretzky also happens to be a trustee of a repeater in Queens, New York that is primarily sponsored by hams who are members of the New York City Police Department.
The investigation of Guretzky's alleged illegal activities is being

carried out under the supervision of Sargent Gary Weisbecker of the Queens Internal Affairs Bureau. Assistant District Attorney David W. Lee is prosecuting the case. If convicted on all charges, K6DPZ faces up to seven years in prison.

(*****
MITNICK PROBATION HEARING

A probation revocation hearing for computer hacker Kevin David Mitnick, N6NHG, has been set for the end of January. Mitnick is the alleged computer super hacker who was arrested in North Carolina last February. He has since entered into a plea bargain on federal charges but still faces the probation violation hearing in Southern California.

(*****
THIS WEEK IN AMATEUR RADIO COMING BACK

An old friend of many repeater news nets has announced plans to return to the air early in 1996. This Week in Amateur Radio is coming back to the satellite and to a repeater near you. Stephen Anderman, WA3RKB is the Executive Producer of This Week in Amateur Radio:

"An agreement has been reached between the 'Tech Talk Network' and

operators of the Canadian Telesat Anik E2 commercial communications satellite. All communications hobby programming of TTN including 'This Week in Amateur Radio', will return to the air in January. The agreement awaits formal signing by the uplink carrier and SKYVISION, which underwrites the network uplink costs.
'This Week in Amateur Radio' carries ARRL Bulletins, contest and convention information, propagation forecast summaries, RAIN, the

Radio Amateur Information Network, and of course, Newsline.
Once the agreement is signed, telephone lines will be secured and installation of the network audio uplink equipment can proceed. The network will utilize transponder 18, that's 9B vertical for those using commercial satellite receiving equipment, at 5.8 MHZ wideband analog audio. Anik E2 provides excellent coverage of North America with spot beams aimed at Alaska and Hawaii.
But the best part is that Anik E2 is expected to remain operational

into the 21st century and provide a more permanent home for the network. Look for 'This Week in Amateur Radio' to return to the air early in 1996." WA3RKB

Anderman says that as soon as an exact date for the return of This Week in Amateur Radio is set, he will call and let us know. As soon as he does, we will let you know.

(*****
XMAS 6 METER OPENING LASTED FOUR DAYS

The Christmas Day 6 meter opening we reported on last week expanded

up to two meters and lasted almost a week. It also may have been worldwide throughout the northern hemisphere. As late as Thursday night, December the 28th, reports were showing up on the VHF reflector indicating that single and double hop 6 meter E layer contacts were taking place all across North America, into the Caribbean and into parts of Mexico.
Early on Tuesday the 26th, postings began to show up telling of 700

to 1000 mile E layer contacts on 2 meter SSB and CW. Most of these taking place north to south along the Eastern seaboard. Reports filtering in late in the week indicated that similar conditions were taking place all across Europe and into Asia though few actual contacts were detailed. The opening seemed to end early on Friday the 29th, with no reports of any 6 or 2 meter E skip since then.
The sad part of it all is that FM users seemed totally oblivious to

this truly amazing band opening. Though word of it spread quickly within the VHF DX community, when word finally reached the bulk of VHF FM users, most seem totally un interested in the fact that their ten watt radio had the ability to work the world if they would only go to a simplex frequency and listen. Most seem to have stayed on their local repeaters and simply ignored the possibility of working some truly rare DX.

(*****
WEST RESPONDS ON 6 METERS

And speaking about working 6 meter DX, not all new hams coming 6 meters are unaware of the bandplan and not all commercial ham radio schools are diploma mills. So says nationally known ham radio instructor Gordon West, WB6NOA.

West takes issue with claims made by a number of longtime six meter

users who say that commercial schools are turning out newcomers who are coming to the band and setting up FM operations anywhere they please. He says that his students know right from wrong when they walk out the classroom door:

"With regard to licensing mills that produce amateur operators that and are not familiar where FM is allowed in the normal portion of the band and where weak signal work is allowed. Here at radio school we take great pain to insure that the students enjoy weak signal operating as well as enjoy the other modes like packet, amateur TV, and of course FM by showing them in class how to operate on these specialized modes. And that every mode on the radio has a specific spot." WB6NOA

West says that he believes it to be the responsibility of every ham

radio instructor to do more than just teach code and theory. WB6NOA says that basic operating skills must be a part of the curriculum as well.

(*****
IRELAND PACKET CONCLAVE

From overseas, word that Ireland's AFAR who was recently appointed national packet coordinator has invited that nations packet radio community to a meeting. The gathering will take place at the Prince of Wales Hotel in Athlone later this month. AFAR says that potential packet users who live in a part of Ireland not yet served by packet are especially encouraged to attend.

(*****
SAFEX 2B READY FOR LAUNCH

And from Germany, word that SAFEX 2B -- the second part of the new ham radio repeater in space is ready for launch. Most of the equipment has now been taken to Kaliningrad by Thomas Kieselbach, DL2MDE, and Markus Fischer, DG2MJW, and handed over to the Russian space authorities. Once on the Mir, the equipment will be installed in the new "PRIRODA" Module of MIR, which will be launched in March 1996.
The SAFEX 2 station is made up of two parts. First is the 70 cm communications device for direct and repeater voice contacts. Section B services packet radio, and also contains a 13 cm module for broad bandwidth modes like ATV. Some missing parts of this module will be taken to MIR on a later supply missions.

(*****
DX - HEARD ISLAND UPDATE

In DX, we have an update on the abortive Heard Island operation that

was planned to commence last November and the groups plans for 1996. As regular listeners know, the 1995 Heard Island operation was canceled due to the unsuitability of the ship chartered and paid for in advance by the DXers. A statement issued by the Wireless Institute of Australia, outlines in detail the problems encountered by members of the Heard Island Group. The report says that they lost more than 165,000 Australian dollars as a result of an obvious con job by the owner of the boat, who at the time of this report had still not been found.
K0IR was the team leader for the planned November trip but he will be unable to participate in the next effort. Responsibility for reorganizing the venture will now be shared by ON6TT and KK6EK.

(*****
DX - WAKE ISLAND

The Dateline DX Association has announced that its plans to activate
Wake Island from January 24th to the 31st. This will be a one week operation with the intention of taking KH9 off the DX Bulletin's most needed 100 list and at the same time satisfying the large European demand. The call sign to be used will be announced shortly before commencing operations to minimize pirate activity. Operators are AL7EL, WB2DND, KC7V and K4HQI. Activity will be on all bands including the WARC bands. There will be a major emphasis on RTTY and satellite, as these modes have never been activated from Wake. QSL via:

AL7EL, Tom Harrell
27257 Nellis Road
Evans Mills, NY
13637

(*****
DX - GUAM

And WH6ASW is a teacher on Guam and will be there for the next two years. Begin looking for him on the bands as WH6ASW/KH2 very soon. QSL via G3EZZ.

YHOTY '96 NOMINATIONS SOUGHT

The nominating period for 1996 "Young Ham of the Year Award" is now

open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby / service.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a

self addressed stamped envelope mailed to the:

1996 Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online.
Sorry, but there is no way for us to respond to packet radio electronic addresses. To many requests were not deliverable to packet addresses last year. If you want to obtain a nominating form electronically, please do so from one of the commercial services or via the internet. Requests to send to packet mailboxes will be ignored.

(*****
1995 LEAP SECOND

And finally, were you aware that 1995 was actually a bit longer of a
year than originally planned? That's because the International Earth Rotation Service -- yes, the really is an International Earth Rotation Service -- the service added a leap second to the end of the year. Or was it to the beginning of 1996?
What actually occurred was that a second of time was inserted in the
interval between 23 hours, 59 minutes and 59 seconds on December 31st of 1995 and 0 hours, 0 minutes and 0 seconds on January 1st of 1996. So if New Years Eve seemed a tiny bit longer to you, now you know why.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk, we remind

you that there are only 40 more weeks until we celebrate newscast number 1000. Right now, 73 and we thank you for listening.

We have set up a Free Ham Radio Web based Forums Site for general use.

As these forums grow, more specific purpose forums will be created for
things like For Sale notes, etc.

These forums are open to the general internet community, and your
participation is encouraged! The Forums System on which they are implemented
is very easy to use.

The url is: http://hamradio.bicnet.com

Regards,
Steve KA1SI

I have a '93 Grand Cherokee Laredop w/ V-8.

VHF OK, HF bad news.

Cruise control, theft alarm a d transmission will all perform erratically when transmitting above 25 watts.

Wasn't worth the hassle. Stick to 2m under 25 watts WITH OUTSIDE antenna, preferable a mag mount so you can move it around for best performance.

SB DX @ ALLBBS $OPDX.237
Ohio/Penn DX Bulletin No. 237

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 237
BID: $OPDX.237
January 8, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4UTE, AA5F, KK6H, K8GG, WB8LFO, AH0W/OH2LVG, K0HB, KI0W, 9M2TO, Alberta Amateur News, AH0AV/JH6RTO, G4BUE & DX NEWS SHEET, PA3ERC, VE3HO, VS6WV/XU6WV, ZP5VG, ZS1FJ/G4MFW and ZS1CM the following DX information.

3A, MONACO. Laura-Marcelle, 3A2MD, reports she is on every day between 1400z and 1600z on 14175-14180 kHz (+/-). QSL to her personal address (it is faster to receive QSL than via PO Box!): Laura-Marcelle Martinez, 73 Bd du Jardin Exotique, 98000 Monaco.

4U1UN QSL CHANGE (from Jerry, WB8LFO). "Effective immediately, the requests for any of the 4U1UN cards or any of their special callsigns (such as 4U50UN) should be sent to WB8LFO. The use of W8CZN (our mail drop) will be discontinued. We would like to thank Jim, W8CZN and Rick, K8SCI of North Olmstead Amateur Radio Depot (the pick-up point) for their services. The closing of Rick's store is what brought about this change. N.O.A.R.D will be missed. WB8LFO has logs going back to 1986 for the UN operations and is presently working on bureau QSL cards. Cards will be processed as fast as possible. A reminder that the UN Readiness Group meets Tuesday evening on 14.268 MHz at 7:30 EST or on Wednesdays at 0030z. Any quesations about 4U1UN QSLs may be directed to me by E-mail at the following addresses: wb8lfo@centuryinter.net OR aa1671@freenet.lorain.oberlin.edu The address at Century is the preferred."

9G, GHANA. Steve, PA3GBQ, is now active as 9G5BQ. He will be active on all bands. Check around 3515 kHz around 0240z and 7010 kHz around 0115z. The length of his stay is unknown at this time. QSL via his homecall.

9J, ZAMBIA. Brian, 9J2BO, who is quite active on all bands (including the WARC bands) was heard around 3505 kHz at 0415z and 10103 kHz at 0520z. Brain has announced a new QSL address. QSL to: Brian Otter, PO Box 34554, Lusaka, Zambia.

9M2, PENANG ISLAND (WEST MALAYSIA *UPDATE*). Tex, 9M2TO, has supplied OPDX with the following on the air schedule. He likes working CW, so look for him: 7007/7027 kHz (FOR USA) at 1400-1500z, 10102 kHz at 1300-1400z and 18070 kHz (WEEKEND) at 0800-1000z. He reports that he has worked over 1,600 QSOs on 17, 30, 40 and 80 meters during November and December (not including the contests). QSL via bureau (JA0DMV JARL) or direct to: Tex Izumo, Bukit Dumbar Apr. 9-4, 97 Jalang Thomas 11700, Gelugore, Malaysia.

BERMUDA WORLDWIDE 1996 CONTEST (March 16-17, 1996). Larry Koolkin, VP9MZ, contest manager for the Radio Society of Bermuda wants to remind everyone about the upcoming contest. The Society would also like to encourage as much participation as possible. By the way, once again, the Bermuda Tourism Department WILL BE PROVIDING FREE ROUNDTRIP TRANSPORTATION to Bermuda for the worldwide contest winner!!!!! This happens during their annual Radio Week event in the month of October which incudes their annual awards banquet. Accomodations are also provided at the beautiful Palmetto Bay Hotel. OPDX InterNet SUBSCRIBERS will be receiving an additional bulletin with the rules for the contest.

CORRECTION DEPARTMENT. In last week's bulletin, the zipcode for the PS8YL/PR8 QSL information was incorrect. QSL to: Teresinha V. Nobre, Rua C 2103, Jardim Aeroporto, 64200-970, Parnaiba/PI, Brazil... and... Please correct the name of the QSL Manager for 9K2ZC and 9K2YY to Derek McClure (not Raymond McClure, which is his father and QSL Manager for 9K2ZZ). QSL to Derek McClure, 674 Crestlyn Drive, North Augusta, S.C. 29841.

DXAC NEWS..... The DXAC vote on the possible deletion or withdrawal of Mount Athos has been now pushed back to February..... The Rocky Mountain Division now has a new representative for the DXAC. Wayne Mills, N7NG, will be replacing Charlie Summers, KY0A....

KC6, PALAU. Seiji, JH6RTO, will be active from Palau as KC6FS from January 12-16th. QSL to his homecall, though the address in the DX callbook 1995 is invalid; cite the 1996 version. Seiji Fukushima's (AH0AV & JH6RTO) new address is: 2-183-A207, Soubudai, Zama City 228, Japan.

KH4, MIDWAY ISLAND. W.P. (Bill) Myerson, NH6D, is returning to Midway Island on January 15th for a 2-week stay. With thanks to Wayne/WB6EQX, Bill will be operating on 40, 80 and 160, both CW and SSB. QSL this operation to Dick, KL7H/W6, who also has the logs for Bill's December 1995 KH4 operation. As of the first of January, Bill has already sent out over 2,000 QSL cards for his December KH4 operation.
Another DXpedition to Midway is planned for March, 1996, as an all-band, all-mode operation involving a large group of mainly US amateurs. More details, including QSL route, TBA later.

PJ2, CURACAO. The Battle Creek (Michigan) Lowbanders, George/W8UVZ, Charlie/W0CD and George/K8GG, will be going to PJ2-land, for the CQ WW 160 CW Contest January 26-28th, as a multi-operator entry. The contest call will probably be PJ9Z. Contest exchange should be "5NNCUR" or "5NN NA". They should be active from late January 22nd or early January

23rd through 30th. There will be lots of Low and WARC band activity before and after the contest. Outside the contest, callsigns may be PJ2/HomeCall. All QSLs may be sent direct to W8UVZ at 271 Parkshore Drive, Battle Creek, MI 49017, USA, or via the bureau. QSLs for contacts outside the contest or to another operator may be sent to the operator's home address or bureau. Please send SASE or SAE plus IRC or green stamp for return postage with all direct cards. All three operators are OK in recent Callbooks. Please DO NOT send QSLs via the PJ bureau!!!
This is the group that builds and sends Battle Creek Special DXpedition antennas around the world to help put more countries on the low bands and encourage 160 meter activity. Please support them with a contest QSO.
If you have any questions, please respond by InterNet E-mail to: george.guerin@kellogg.com, by phone, evenings at 616-968-2633, or by fax to 616-961-3381 starting the fax with "Attention George Guerin".

SPECIAL PREFIXES COMMEMORATING THE END OF THE HOLOCAUST. The Industry Canada Quebec Region has authorized all Canadian Amateurs to use special prefixes to mark the 50th anniversary of the end of the Holocaust from now until 2400z 29th February 1996. Canadian Amateurs may use special prefixes as follows: VA2 change to CG2, VA3-CG3, VA7-CG7, VE1-CF1, VE2-CF2, VE3-CF3, VE4-CF4, VE5-CF5, VE6-CF6, VE7-CF7, VE8-CF8, VE9-CF9, VO1-CZ1, VO2-CZ2, VY1-CK1 and VY2-CK2.

T31, CENTRAL KIRIBATI. T30DP is currently on Kanton and is there on government business for a few weeks. Reports indicate that he will be active as T30DP/T31 on 20 meter only, but on the Ohio/Penn Network, he was spotted on 7012 kHz at 1300z. QSL via VK4CRR.

VK0WH LOGS AND QSL CARDS (UPDATE). According to Jim Smith, VK9NS, the VK0WH logs covering 26th November - 31st December 1995 were received from Warren Hull via fax. Warren made slightly more than 200 contacts during that time. Jim anticipates receiving VK0WH logs on a monthly basis. Jim also received the VK0WH QSL cards from the printer, and he will QSL immediately upon receipt, assuming that he has the appropriate log in hand. There are, apparently, a couple of time slots of SLIM operation:
5th December 1000z 40M CW
16th December 1000/1100Z 40M CW
25th December 1100Z 40M CW

XU, KAMPUCHEA. Mike, VS6WV, has left earlier than expected for XU-land, and he should be there by the time you read this. He states he will use the extra time to improve the 40/80 meters antennas and to try to figure a way to get a reasonable antenna up for 160 meters. He expects to be operational pretty much daily 1 hr before his sunset/sunrise. If he can get the 160 meters antenna up, he will give 80/160 meters most of his attention. Otherwise, it will be 80/40 meters CW with an occassional trip to 20 meters SSB. Suggested frequencies: 7007 QSX up 2-4 kHz, 3511 or 3517 QSX up 2-4 kHz and 1823.5 or 1829-31 QSX up (hopefully). QSL requests should continue to go to Mike Vestal, P.O.Box 2011, GPO, Hong Kong.

XV, VIETNAM. Rolf, XV7SW, has reportedly erected an Inverted L antennas for 80 and 160 meters over the holidays. He will also be adding an

Inverted Vee for 40 meters. His location in downtown Hanoi is very noisy, so he may need to consider separate receiving antennas. Rolf is limited to 100 watts on the TopBand. The terms of his license limit him to specific frequencies. On CW listen for him at: 1827, 3505, 7013, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. QSL direct to Rolf T Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam or to his QSL Manager SM3CXS.

YA9XL LOGS UPDATE. Yan, F5TCN, QSL Manager for YA9XL, reports he now has logs for December 1-9th. He also mentions he will try to get documentation and forward it to ARRL.

ZP73, PARAGUAY (NEW SPECIAL PREFIX). A team of 6 operators will activate the new prefix and callsign ZP73Y, from January 23-30th. The field-day like expedition to the country side, on a hill of about 700 meters high, will be operated totally based on generator power. They intend to be on all bands, but suggested frequencies are: 3795, 7045-60 (RX/TX) 7175 (RX), 14195, 21195 and 28395 kHz. QSL should go to ZP5WYV.

ZS64, ROBBEN ISLAND (IOTA AF-064). The SARL Cape Town Branch members will be active from this island located in Table Bay on the Atlantic Coast of Cape Town at the southern end of the African Continent. Robben Island is famous as the island on which President Nelson Mandela was imprisoned for over 20 years. This DXpedition was the planned by Barry, ZS1FJ, also known as ZL8/G4MFW (Kermadec Island) and VR6AB (Pitcairn Island). Barry and a team of operators consisting of ZS1CM, ZS1AU, ZS1B and ZS1AAX will be active from January 26-29th. Activity will be on all bands from 80-10 meters including WARC bands with operations on CW, SSB and RTTY. The planned callsign to be used will be ZS64RI and this will be a one time only operation. QSLs will go to KA1JC.

ZS1FJ/G4MFW (BARRY) DXPEDITIONS SCHEDULED FOR 1996-1997..... (by ZS1FJ)
1) January 1996: Robben Island part of AF-064. (READ ZS64)
2) March 1996: unnumbered IOTA location in Southern Africa, called Cape Province - South Coast. This is an uninhabited island occupied by seals so thickly congregated that it will make landing and placement of a beam difficult. This is already approved by the IOTA committee of the RSGB, to whom I am indebted for their great assistance. The AF-IOTA number will be allocated after landing and making of 50 QSOs with 5 different countries, per IOTA rules.
3) May 1996: Anticipated DXpedition to 3B6. This is a question of transport and will include a number of ZS-DXers.
4) For those who were disappointed in not being able to QSO with me on ZL8, I am pleased to announce that I plan to be on ZL8 again in November, 1996. This should be a much better time for propagation than last May, 1995! Also, with the benefit of having operated there, I shall use another part of the island for a better line to Europe and Africa as well as to the USA which was the best last time. Equipment and antennas will be upgraded as well. CW will be catered for as well as SSB. More details in due course.
5) I expect to be on another DXpedition to a Pacific destination with some US amateurs, but more about that at the appropriate time.

6) In 1997, I am anticipating a DXpedition to Bouvet 3Y5, courtesy of the South African government, with provision for transportation to and from the Antarctica. I expect to be there at least 2 weeks with landing permission and license from the Norwegian government. More on this later, including an announcement of two illustrious DXpeditioners who will accompany the DXpedition.

Final Comments by Barry ZS1FJ/G4MFW: As in the case of my previous DXpeditions I do NOT expect to be financed by the amateur community (except for equipment for the Pacific item in #5 above which involves other amateurs) since I regard these trips as a great holiday and adventure. Please be patient with me in the pile-ups! Finally, I expect that my dear friend Phyllis KA1JC will be the QSL manager.....
73 de Barry ZS1FJ/G4MFW

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

PRESS RELEASE
January 2, 1996

1996 YOUNG HAM OF THE YEAR AWARD
NOMINATING PERIOD NOW OPEN

The nominating period for 1996 "Young Ham of the Year Award" is now

open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details)

Any continental United States (FCC licensed) ham radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted before June 30, 1996 on an official application. Application forms are available for a self addressed stamped envelope mailed to the:

1995 Young Ham of the Year Award
c/o Amateur Radio Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also for electronic download from

several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online (AoL Ham Radio Club BBS - Software Exchange - General Interest Files).

With continued corporate sponsorship, the award presentation is scheduled take place at the 1996 Huntsville Hamfest. The Huntsville Hamfest is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracts 7000 or more attendees.

The Young Ham of the Year Award program was conceived in 1985 by then Westlink Report "Editor-in-Chief" Bill Pasternak, WA6ITF. His desire was (and still is) to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio.

With the absorption in 1995 of the Westlink Report readership base into Worldradio Magazine, the awards originator has decided to continue it under the banner of his own "Amateur Radio Newsline" organization. It is his belief that this real-life experience may lead the award winners and many other young hams into technology based careers that will make them the scientific leaders of the future.

The Amateur Radio Newsline, better known as "Newsline" is the worlds
largest not for profit and totally independent ham radio broadcast news and data information service. It was organized in 1976 by Jim Hendershot, WA6VQP and Bill Pasternak, WA6ITF. Since that time it has produced and put to air over 960 consecutive weeks of news of free bulletin programming dealing with Amateur Radio and related personal communications issues.

Corporate underwriting for the "Young Ham of the Year Award" program
is traditionally supplied by Yaesu U.S.A. Corporation and CQ Magazine. Yaesu is a world leader in the design, manufacture and distribution of high quality Amateur Radio and commercial two-way radio equipment. CQ Magazine and its sister publications CQ-VHF and CQ-Contest are owned by CQ Communications and are considered the trend-setting publications serving todays modern radio amateur. The continued support of this award by Yaesu and CQ has been well-received within the U.S. Amateur Radio Service.

The United States Amateur Radio service is force of over a half-million publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international

relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster.

Past recipients of the Young Ham award, all of whom epitomize the heart of dedication to their nation include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991), Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux N5XMH of New Orleans Louisiana (1993), Allison Zettwoch KD4CKP of Louisville Ky. (1994) and Adam Weyhaupt N9MEZ (1995).

THE 1996 YOUNG HAM OF THE YEAR AWARD
NOMINATING FORM
INSTRUCTIONS

1) Fill out the attached nominating form completely.
2) You are required to supply full and complete verification of any

claims made regarding your nominees qualifications. This can include, but not be limited to letters of confirmation from others involved in the same activity, newspaper or magazine articles detailing the accomplishments of your nominee; recordings of TV or radio news coverage of your nominee's achievements, etc. Use your imagination. The more documentation that you supply, the easier it will be for our judges to reach a decision.
3) This award is not a contest for a prize. Any prizes given are secondary in nature. A person selected as "Young Ham of the Year" is judged on his/her contributions to society through Amateur Radio. For example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judged as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 year old Novice running a net during a major disaster would definitely be given consideration.
4) The Amateur Radio Newsline (Newsline) sponsors the award program

and guarantees that the winner will receive a plaque noting that honor. All other gratuities are provided at the option of any corporate underwriter. An underwriter may, at its choice, provide the winner with a trip to an Amateur Radio convention or hamfest of our selection. If awarded, this trip will be limited to transportation for

the winner to the venue, hotel accommodations, convention and banquet tickets and a prize. Not covered are any miscellaneous costs such as local transportation, incidental meals, locally made purchases, etc.
5) Neither Newsline or any corporate underwriter provide transportation or lodging for a parent, other relative or guardian traveling with or accompanying the award winner to the convention city. A parent, relative or guardian is free to share accommodations with the winner based on their personal arrangements.
6) In the event that a winner is unable to travel to the convention, the Newsline will attempt to arrange a special award ceremony where the recipient resides; IE: in his/her school, before his/her radio club, etc. In this case the trip to the convention will be forfeited by the recipient, but all other aspects of the award will remain.
7) Decision of the judges is final.
8) Please mail the nominating forum along with all substantiating materials before June 30, 1996 to the 1996 Young Ham of the Year Award, 28197 Robin avenue, Saugus Ca. 91350

I think the call has to be dead 5 years beore they re-issue it.

406. 2-Meter Mobil/Toyota Camry

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-07 00:00:00 UTC
From: Del Perry <perry@owens.ridgecrest.ca.us>
Message-ID: <DKsG2v.Av7@ridgecrest.ca.us>
Source record: 232719

My father has just ordered a new Kenwood TM-241 2-Meter radio to install in his 95 Camry. I have a 92 Camry and remember seeing something on this group about RFI from a 2-Meter rig damaging the computer in a Camry. It seems to me that the radio was mounted too close to the computer which is on the passanger side of the Camry.

Does anyone know if this is still a problem? If so does it matter which radios are better/worse. Any information is appriciated. Thanks.

Write

listown@jackatak.theporch.com

(as suggested in each of the messages you have received from the mail
list and the archive (the FAQ/welcome/help)

> Anyone have any idea as to what, if anything, I am doing
> wrong?
Yes... you have been sending your subscription requests directly to
the mail list and not to the admin address...

ALL admin should be sent to:

listproc@theporch.com

to subscribe, send your email to listproc@theporch.com and in the
body type:

subscribe boatanchors <your name>

PLEASE use your real name... it helps me track people and email
addresses, and allows me to answer "What is xxx email address?"
questions rather than have them on teh list itself.

> The welcome message implies that "voluntary"
> contributions are required "to ensure continued receipt"
> of the list.
I beg to differ. NOWHERE does it say the contribution is *required*...
it does say, clearly, that there is no such thing as a free lunch,
and that Phil and I spent several thousand dollars a year to keep the
list running, and we would greatly appreciate some financial help...

The intent was to keep the list open and available through voluntary
contributions, but so far, with several notable exceptions, Phil and I
are the ones who are volunteering to contribute! ;^) As a result, the
list will, at some time inthe near future, have to go to a paid
subscription basis, but for now it is free, though a contribution is
helpful and greatly appreciated...not *required* just appreciated,
'cuz we are tired of shelling out the money to keep the list going.

> Is a contribution a prerequisite for
> suscribtion to the list?
See above...

Hi Manfred,

In <4cmpc4$m2p@pf2.phil.uni-sb.de> mvogel@134.96.68.11 (Manfred Vogelgesang) writes:

>My problem is:
>Listening to shortwave (this also means the ham bands), I get a lot of
>trouble with TV sets in our house (and to a less degree from the
>neighbourhood, too). About every 15 kHz, I get a lot of interference
>by TV when listening to my shortwave radio. DXing is considerably
>restricted then.

You're not alone - TVs have a horizontal sweep at 15.575 (or is it 15.750? I forget). It's 15 kHz and some change :) Anyway, your problem is one that we all share.

>So what could I do? I know that there might be some filters, although
>I can't find them in any shop here.

There is a company called JPS Communications, Inc. that has some filter products that might help. I received a catalog from them today in the mail. They have a WWW page at http://emporium.turnpike.net/J/JPS/jps.html You can look at what they have. I haven't heard much from anyone who owns them, but what I have heard is very positive.

>Are audio filters, notch filters ... also effective against TV
>interference? What about preselectors?

Well, notch filters might help some, but the signal is so raspy that it's hard to null out if you are trying to receive something like CW (Morse code).
If you are trying to get AM broadcast, you might be able to use a simple DSP unit, like the one Radio Shack sells. But you have to remember that the signal that you are receiving sounds like a legitimate signal to your receiver, so it tries to get it just as hard as it tries to get the "real" signal. A preselector would just make the interference not get interfered with :(

>If someone might give me a hint, I would be very glad. But please
>consider that I am not very talented or experienced in constructing
>devices on my own.

That depends. Do you have access to the TV (is it yours, or a neighbors)? There is a metallic spray that you can use - it looks like a can of spray paint - that you can spray on the inside of the TV cabinet, and it will help reduce interference of this kind. You can also glue aluminum foil to the inside of the cabinet (be careful to keep vent holes clear).

Hope this helps, and 73!

410. "Linear" versus "Amplifier"

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-07 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <4862.820990964@safety.ics.uci.edu>
Source record: 232723

I am feeling more anal than usual, and my father used to beat me
whenever I used a word "wrong" (not the way he considered proper)
--- and here is the fallout.

I go nuts whenever I hear hams call their amplifiers "linears".
"Linear" is an adjective, not a noun. Lots of things can be linear.
The adjective "linear" describes the way the amplifier amplifies.
Calling a linear amplifier a "linear" is like calling an auto tuner
an "auto" or a digital filter a "digital".

Ahhhh, now I feel better. By the way, yes, I have done this myself.
Lately I have noticed that it drives me crazy though, and now I call
them "amplifiers" instead of "linears". My dad would have wanted it
that way. :-)

:-).

Subject: Which Jack for HF Radio-to-TNC Cables? (new article)
Newsgoups:

Many HF radios have more than one jack that can be used to cable the radio to the TNC. How do you decide which one to use? The article "Which Jack for HF Radio-to-TNC Cables?" describes the transmit methods (AFSK, FSK, CW), and things to consider for each jack.

Article URL: http://www.idir.net/~medcalf/ztx/hf2tnc.html

From the home page at http://www.idir.net/~medcalf/ztx/ you can link to other articles, including one with sound files of the TOR modes. The articles may be reprinted in amateur radio club newsletters provided that credit is given to the author.

The site also contains diagrams for wiring radios to tncs.

I stopped reading Wayne Green several years ago. I found many of his
commentaries completely without substantiation and some downright
ludicrous. I could never figure out what his ramblings about AIDS
and homosexuals had to do with Amateur Radio and why they appeared
in '73 Magazine'.

While I would never censor anyone's right to speak whatever they want,
its unfortunate that misinformed or intentionally-misleading people
have the "ear" of their readers -- it serves nothing except to
propagate the hogwash they are peddling as "truth" when in fact it
isn't.

I opted to vote with my pocketbook, and I didn't renew my subscription.
I hope others plan to do the same. His freedom of speech does not
mean he is guarenteed an audience.

I am looking for information about the protocols used by Lowe, Drake, Japan Radio, and AOR radios for their computer interfaces. I plan on modifying the shareware Macintosh radio interface software I already have for Icom rigs. (Kenwood and Yaesu versions are already under development)

If anyone has copies of the protocols for these radios, I'd appreciate getting a copy, or finding out where I can get the information (is it online?)

Thanks,

Chris

>>
>Wayneo Draino lost it years ago. I think he has spouted his line of
>BS so long that he actually believes most of it. Have you noticed
>that just about every sentence in his editorial starts with "I"?
>I did this and I am that. What an egotistical goof.

At least he doesn't refer to himself as "we" like so many amateurs do. Most any writing class tells you to write about what you know, and to write about your own experiences. Wayne's editorials are just that, a first person marrative of things he's done, things he's seen, and things he believes. As such, the frequent use of "I" is perfectly correct.

>W2 Not Sane, Delusional. Funny thing is a lot of people worship
>this guy. Not that suprising when you consider several hundred
>people guzzled Jim Jones Kool-Aid a few years back...

Wayne has been around a long time, he's seen a lot, and done a lot. Much of what he's written is interesting, some of it is objectively true, and most of it is his opinion. Of late he does seem to have been caught up in the web of the quacks and the credulous dealing in pseudosceince pursuits such as miracle cures, the fountain of youth, and cold fusion.

That's not hard to understand for someone who's been a fighter all his life who now finds himself staring the Grim Reaper in the eye. Wayne is grasping at straws, and there are plenty of the credulous and unscrupulous out there to feed his hopes, and take his money.

Other great editors have fallen prey to the same thing. The late John W. Campbell fell under the spell of Scientology, even though he knew Ron Hubbard, and knew the thing started as a hack writer's joke. Campbell also chased after the "fifth" force, giving lots of time and energy to unlikely anti-gravity machines. He *wanted* it to be true so much that he lost his objectivity.

Now those things didn't make Campbell any less of a great editor, nor did they make him insane. Neither are Wayne's rainbows evidence of insanity. There's at least a veneer of rationality covering the far out things he's pursuing. That's better than if he were to be caught up in religion which is totally non-rational. If he suddenly starts spouting religion, then we'll know he has well and truly

lost it.

"Recently" !!?? I remember more than 40 years ago when the young Wayne Green became the editor of CQ magazine. He was the first to bring the techniques of yellow journalism to the ham radio field; I let my subscription lapse, in response. Down through the years, several times I looked at a copy of his latest efforts and found that he hadn't changed much, and what changes there were were not for the better.

I have always found that, as people get older, their bad habits don't get better, they get worse. Green is another manifestation of that. I also have to admit that the same applies to me! :-)

Gee, I guess we better quit calling television receivers "televisions",
or just "TV", then, and quit calling stereo FM receivers "stereos".

The English language is a living breathing thing, evolving by
common usage. It is not a dead relic like latin, and there are
no government language police as there are for French. It means
what we say it means, and we've decided by common usage that
television is now a noun, and so is stereo, and so is linear.
Get used to it.

The HamCom '96 amateur radio convention is expanding its focus this year, with a theme of "Computers, Satellites, and Microwaves in Today's Amateur Radio" and is looking for speakers who can address these topics. Of particular interest are programs which bridge these topics (High speed packet on the microwave bands, packet operation via satellite, etc.). Speaker sessions are typically 20 to 30 minutes in length. HamCom '96 runs Friday, Saturday, and Sunday, June 7 - 9, with speaker's forums all day Saturday and morning on Sunday.

If you are interested in speaking at HamCom '96, or have suggestions for speakers, please contact me at email address craigs@ti.com, or via phone at (214) 952-4616.

Please use the term Linear Amplifier. Amplifiers
are not all linear amplifiers. Many VHF operators today
refer to their amplifiers as linears when usually they are not
linear amplifiers at all. You pay more for a linear amplifier,
absolutely necessary for AM or SSB, than for a non-linear one.
This is some CB lingo that has carried over into the ham
bands.
I feel that many are showing their lack of knowledge
of ham radio when they use term such as "linear" and "10-4".

> about it? Anyone have it? Does it work well? How does it work?
>
I was using a modplayer called Visual Player by a Spanish guy whose name I
don't remember some time ago. It was running completely in VGA graphics and
was controlled by a mouse. It could only play 4-channel MODs unfortunately.
The point is, that the registered version included so called ADC mode, which
allowed the spectrum analyzer to be used on about any input signal. The
only trouble was, that you couldn't set the sampling rate (I've got a SB16),
which was preset at an unknown value. As far as I know, there are no further
versions available.
I also remember noticing several files in MS-DOS/sound part of SIMTEL
archive, that claimed to contain spectrum analyzers for SB/PAS soundcards.
Check out your favourite mirror.
Some useful info might also reside somewhere on x2ftp.oulu.fi , probably in
the /pub/msdos/programming/ directory.

Hope this helps.

Frank

BTW.: Has anyone come across audio signal equalization algorithms? I mean
I'm just a rookie interested in how it works, I have some general ideas.
I'm not interested in buying books.

440. Strange RFI Solved

I posted an article here a couple of weeks ago about some RFI I was receiving. I would get a strong noise about every two minutes for 30 seconds. Two people replied suggesting that it might be a street light and that's exactly what it was. The power company (Atlantic Electric in southern New Jersey) fixed it after only three phone calls and a couple of death threats.

Thanks to the people who responded.

Not only is "linear" an adjective, but a more incorrect usage comes up all the time when referring to an amplifier for VHF frequencies and up, most of which are not linear at all.

The phrase that gets me is "first personal" instead of "name." Where the heck did this come from? Sounds like some combination of political correctness and military jargon.

GE

Anybody got it - and how much $ to send?

73,
WA2EAA - tony

--
The Coyote's | I'm the voice of all the Wildest West, the Patti of the Plains;
Song | I'm a wild Wagnerian opera of diabolic strains;
Ernest Thompson| I'm a roaring, ranting orchestra with lunatics becrammed;
Seton, 1913 | I'm a vocalized tornado - I'm the shrieking of the damned!

444. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-08 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4crub1$94r@lyra.csx.cam.ac.uk>

Phonetic Alphabets (Alpha Bravo etc)
January 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 23rd November. New this
time: Army Brother Cinema.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest. In the case of Web servers I ask that there be no
reformatting and suggest the use of the XMP directive.

* Following recent discussions this article is not now
* posted to alt.usage.english.

You may also find a copy of this posting on the World Wide
Web at these addresses:

http://www.columbia.edu/~fuat/cuarc/phonetic.html

http://www.cl.cam.ac.uk/users/bck1/phon.full.html

and of the brief version at:

http://www.cl.cam.ac.uk/users/bck1/phon.brief.html

Editorial comments are in square brackets [].

Brian Kelk bck1@cl.cam.ac.uk
8 January 1996

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet is approved by the International Civil
Aviation Organization, the FAA and the International
Telecommunication Union; note that different bodies prefer
different spellings, so one also sees: Alfa Juliett Juliette
Oskar Viktor.
Dates from about 1956.
See also http://aviation.jsc.nasa.gov/alphabet.html, which
includes information about pronunciations]

[UK police use Indigo(?) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book has: Beta Ultra Volvo Whisky X-ray]

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories.
An "analogy alphabet" in a Kenyan directory has 'Charlie'
and no Y. A Swiss directory has: Andrew Charlie Lussy
Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[See also http://aviation.jsc.nasa.gov/old-alphabet.html.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. Dam Busters film: A apple, G George, J Johnny,
L leather, M mother, N nuts, P popsy, Z zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

: I go nuts whenever I hear hams call their amplifiers "linears".
: "Linear" is an adjective, not a noun. Lots of things can be linear.
: The adjective "linear" describes the way the amplifier amplifies.
: Calling a linear amplifier a "linear" is like calling an auto tuner
: an "auto" or a digital filter a "digital".

: Ahhhh, now I feel better. By the way, yes, I have done this myself.
: Lately I have noticed that it drives me crazy though, and now I call
: them "amplifiers" instead of "linears". My dad would have wanted it
: that way. :-)

How is this any more accurate? There are many types of amplifiers, which are biased in various ways. For example, I have a Class C amplifier that is fine for CW or FM. However, it is not linear, so would not be good for AM or SSB (unless plate modulated - but that is another subject).

The term "linear", when used in context, is not ambiguous at all - although the person using the term may be wrong (Such as the common CB "linear" that generally isn't). In this case, it is more precise than the general term "amplifier".

When did the noun "amplifier" become so very legitimate? I am sure it was
an amplifying stage or circuit in Great Grandfather's time, after the first
triodes became available. Maybe we should all have a moan about that too.

From: The Province Newspaper, page A21
Dated: Sunday, January 7, 1996.

Reprinted without permission.
Non-copyrighted story.

By-line: AURAL SEX TUNED IN

By: Roberta Staley, Staff Reporter

A ham radio operator is endangering lives by jamming police
radio channels with recordings of a couple having sex.

"It's extremely dangerous," Vancouver police Insp. Al Forbes
said last night.

"It not only puts the people we're trying to protect in jeopardy
by jamming the channel, it also puts our own members at risk," Forbes said.

The pornographic sounds and two blasts of country music were
first heard Thursday night about midnight. The second incident happened
several times last night starting about 7 p.m., said Forbes.

"I think it's a video and they're playing the sound-track over
the channel."

Police switch the channel off and begin communicating on another
one. The cheeky radio operator also switches over, jamming the new channel.

"They obviously know all the frequencies," Forbes said.

In emergencies, police can be heard over the interference,
although it remains distracting, he added.

The inspector said it's unlikely the radio pervert will be
caught.

End of story.

Actually the latest issue seems incredibly thin, both in editorial content
and in advertizing.

The only reason I still subscrive is that for some reason the expiration date
on my mailing label seemed to have jumped a year or two without my paying
for a renewal (that I can recall). When it does finally run out (sometime
in 1997) that'll be it for me.

It used to be a good mag for construction articles and such, but even that
seems to be going downhill...

Well, my reaction is: if it don't melt, how can you mould it? If it
is the toughest stuff ever made, how do you cut it? If it's an acid
so strong it will eat through anything, what do you keep it in? I
think the key is probably the heat dissipation. Ever try to melt a
penny with a torch? It's very difficult because the copper can
dissapate the heat so well. Copper blocks are also notoriously difficult
to weld/solder to.

I noticed on Yaesu's homepage that they have a WIndows program to program the FT-11R. This is seperate than the cloning feature they offer. I was wondering if anyone has any information on the serial cable that comes with it. They use a DB-25 connector (presumably RS-232C) on one end and a 1/8 in. connector to plug into earphone. I would like to make one of these cables to integrate the programming into a program I already have. Any help would be appreciated.

>mikeabstinancitis! Thanks '73 Rick Nz2I

Circuit Specialists offers a tiny CTCSS encoder which will tuck inside
the IC-2AT nicely. I've seen several nice installations. It is dip
switch controlled, so if you want to be able to change the tone frequency
without opening the radio, some case surgery is required. The neatest
install I've seen had a slot cut in the battery mount plate. You had
to remove the battery to change the tone, but it was an invisible
modification, and easily reversed by installing a replacement battery
mount plate. HRO usually has them.

Canada doesn't need a Push To Talk, Jan, we spout off without one.

Industry Canada is the licensing authority for radio in Canada, and
they have offices from coast to coast. If you want a specific address,
email me and I'll look it up, or try the Industry Canada homepage at
http://info.ic.gc.ca/ic-data/ for more info.

)>
)>Would cellular phones be less expensive (say, over a 5-year period) a
)>useful for other needs, like calling a tow truck if your car breaks d
)>on that long commute?

DS>Either cellular is more expensive in your area, or you haven't priced
DS>it lately. Around here you can get cellular for anywhere from $10 to
DS>$30 a month, a free phone and NO setup fees. At the $30 a month rate
DS>you get 30 minutes of peak time and a bunch more off-peak. Past that
DS>calls are typically $.35 a minute.

Yup, got one for my wife who is not a ham. Runs around $22 plus
whatever calls you make. Our plan had some pretty reasonable rates,
but didn't include any 'free' minutes. She keeps it for emergencies
and to let me know when she will be showing up. I use it to order
carryout from the grocery store checkout line. All of these things
we couldn't do with an HT <grin. The phone, a Motorola flip, was
'free' of course. Coverage is so good in the metropolitan area you
can get a crystal clear connection from inside the car. What is
peace of mind worth anyway? 73 de WA8JDW - Mike

PS Also 'free' was voice mail, so you never miss a call to that
phone number. Nice feature since it isn't turned on very much.

I don't think that Bill Cheek's contributions are the issue here, though I suspect from what I have seen that they are substantial. I have not been on this forum long enough to know any of the individuals involved in this flame war. If one was a clone of Adolf Hitler and the other Albert Schwitzer (sp?), I would not know it. It is tiring seeing all of the messages addressed to this feud. I don't have a problem using the delete key for messages that are not of interest to me, but I understand that some users of this newsgroup pay by the message. This must be particularly irritating to them.

That's it, no flames or no finger pointing, just a hope for a reduction in broadcast hostilities.

I like 73 magazine becsuse it covers several areas of our hobby that I like RTTY, QRP, and building projects. They execpted two of my articles, and never paid on publication. It took 8 phone calls, and finally a pointed letter to Wayne, in which I used his editorials agenst him, where he is always beating people over the head to get up and do something, make money. I told him that I did, and he would not pay me. He sent me a personal check.

I don't know what is going on. I almost feel sorry for him. But, I do think he said it best a few months ago, "That he had out lived ham radio." and I am not so sure that I havent also.

<rest deleted>

Yuck. Besides setting the newspaper straight, it would be useful for the local Amateur community to assist the police with radio direction finding efforts in locating the source of the interference. That's been done elsewhere and turned an ugly situation into a great one.

Good luck,
Ed, KF7VY

There was a blizzard.
It snowed.
and snowed.
and snowed.
and snowed.
and snowed.
It was really cold.
It sucked hard-core.
I'm moving to Arizona.
That's how bad it sucked.
I hate snow.

>73
>Vince

Vince,

The best advice ANYONE can give you is to practice, practice,
practice! However, remember only perfect practice will yield perfect
results. Its been a while since I've had a code test (i'm now an
Advanced class), but I do know you will need to know all numbers and
letters, the period, the slash mark, question mark and several
"special" codes (ar, dn, etc.). These were all I remember being tested
on.

After the code is sent, usually for about 4-5 minutes, I had a test. Mine was multiple choice; others can be fill-in-the-blank! The test asked simple questions like what was the calling person's callsign, what was the weather, the signal strength, etc. Don't worry about missing some letters - not many people can copy perfect code! But if you copy enough characters you will get the idea of the message. Be sure to copy the call signs as accurate as possible. I'm not sure if shorthand is allowed, but then again my handwriting looked like shorthand when I was done!!!

Code tapes are helpful. As a matter of fact, I passed both the 5 and 13 WPM tests without ever being on the air! The best tapes that I used were from ARRL. I started out with the Radio Shack tapes. The testing center that I went to used a form of the ARRL tapes, so I recommend those highly.

And remember, practice, practice, practice!

To: charles1@netcom.com
Newsgroups: rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc
Subject: Re: Vote here in Favor of Bill Cheek
From: jococour@cdsnet.net (Mr. Ed)

I have never read any of Mr. Cheek's books, nor have I applied any mods
to my scanner, however, I believe that without him discovering and
disseminating his mods, the scanner world would be an infinitely lesser
community. The speed mods, memory mods, restoration mods, etc., all of
these mods were first discovered by Mr. Cheek, and his attitude of "let's
see what I can make this scanner REALLY do!" has changed the attitudes of
the community to where the consumer expects a good deal more control over
his scanner. Also, his no-bs evaluations have helped me out tremendously.
So often in radio publications, the authors are forced to be somewhat
sycophantic in regards to reviewing their advertiser's scanners...hence,
reviews sometimes seem to be a little sugar-coated. Well, with Bill, you
get his straight unvarnished opinions. True, they're sometimes harsh,
sometimes profane, but so was give-'em-hell-Harry! In short, I vote a
solid YES to Bill Cheek's value to this NG, and to the scanning community
at large

Mr Ed

I prefer the 73 magazine over qst's catalog and contesting reports.
Wayne may be loosing contact with the rest of us but I still get a
kick out of reading him.

Don't mean to interfere with your bashing here but imagine when and
if '73 is gone. That will leave qst and ..... ughhhhhh. Some
thought huh? Then the potential ham can really get a all too true
version of what the hobby is... Overpriced equipment and
contests...

Keep it up Wayne!!!!!!

No no-code techs = less use of ham freqs = letting Uncle Charlie
auction off all that valuable spectrum that is wasted because the brass
pounders insisted that everyone pound brass, resulting in no interest.

(responding from rec.radio.scanner, I listen to the hams and have no
interest in joining them...)

>Dave KZ1O
>
>

I did this a while back. It works really well. With my TV's I turned them all off! What I did was setup education time with the kids and wife. For three hours every night the kids do homework, read books, or make music. I did ham radio. The rule is simple, find something you like to do other than watch TV, and do it. Constructive time is very important. Sometimes we will just sit and play chess and listen to the BBC via shortwave radio. I will tell you something. It works! The kids GPA has gone way up, and we all get to spend time together.

Not that this would work for everyone. But, ham radio/scanning/shortwave radio is a great hobby for the whole family. If you have a family, give it a try.

Hi Luck,

I wondered for a long time what had happened regarding your dismissal from ARRL HQ. Now we can see more of what is going on up there.

As you know I talk regularly with many of the staff and have over the last 10 years been hearing so many terrible comments from staffers leaving either voluntarily or by force that it is really rediculous. Granted I had heard that more of the problems regarded some of the Directors that walk around ARRL HQ spouting orders and expecting the staff to cringe in fear. I truely wish that we would stop the hand-shaking popularity contest that elects these Directors and get some people with business experience. Some of these people have never held any position anywhere compable and never will in the professional field where performance earns position. Being a good audio tech doesn't give someone the qualifications to run a multimillion dollar corporation.

Unfortunately the list of long serving ARRL HQ staff keeps growing at a tremendous pace. The amateur public should some day hear of the tactics used at HQ on some people. I can think of one personal friend that was dismissed after I think 18 years of service there but fortunately he opened his own business in Hartford and can buy and sell I'll bet several ARRL bigshots.

73, Bob, WB2DIN

You're putting my cart before my horse sir.

AFAIK, Wayne was always bashing ARRL. The "question" posed was
asking if he started talking about gays when ARRL started fucking
with them.

The Quack stuff was around much longer.

I don't know though... I'm begining to wonder if maybe I should
find out what drugs he's using, so that when I hit 75, I won't
give a damn what anyone thinks either... just like uncle Wayne.

>>I could be worse and be you.
>>A puppet of Dave Sumner. I heard from a former ARRL employee that
>>the troops at ARRL are not happy campers and live in fear of Mother Dave
>>and mutha Palm.

>>Care to Comment?

He might WISH to comment, Burt, but unfortunately the the subject line above says it all.

Indeed, they do live in fear. Especially those who really, truly CARE about the Amateur Radio Service, and who wouldn't really be happy doing anything else. And it must be absolutely terrifying for those who are left there, given the numbers that have been canned.

The PRIME reason (there were several) I was fired was because I wouldn't knuckle under to Dave Sumner's written mandate that all of our outgoing mail (electronic and written) be censored. Another reason was because I wouldn't sign a document which stated that I'd cease all "harmful external communications". "Harmful", of course, translated into anything that wasn't censored.

If anybody thinks for a second that I'm making any of this up, just ask about the lengthy period of time during which I was forced to endure the dreaded "review panel" in Dave's office. The purpose of this review panel was solely to review my outgoing mail, so as to assure it's "appropriateness". I kid you not...

Luck Hurder, KY1T

Silent Key - VK2SG

ANARTS CO-FOUNDER, SYD VK2SG, SILENT KEY

IT IS WITH DEEP REGRET WE ANNOUNCE THE PASSING OF SYD MOLEN, VK2SG, CO-FOUNDER OF ANARTS WITH BILL STORER, VK2EG AND OTHERS. SYD SUCCUMBED TO A HEART ATTACK ON THE MORNING OF FRIDAY 29TH DECEMBER 1995.

REPRINTED BELOW IS THE EULOGY GIVEN BY BILL, VK2EG, AT HIS FUNERAL ON WEDNESDAY 3RD JANUARY 1996.

SYD WAS ALWAYS INTERESTED IN RADIO AND ELECTRONICS. HE WAS AN AVID SHORT WAVE LISTENER IN HIS TEENAGE YEARS.

EVEN IN HIS SCHOOL DAYS, I HAVE BEEN TOLD THAT HE HAD BITS AND PIECES OF CRYSTAL SETS HIDDEN IN HIS DESK.

IN 1939 HE JOINED THE RAAF AND SERVED THROUGHOUT THE HOSTILITIES ON HUDSON AND DC3 AIRCRAFT IN THE OPERATIONAL PACIFIC THEATRE OF WAR, AS WELL AS AN INSTRUCTOR IN THE FIELD OF ELECTRONICS.

IT WAS DURING HIS WAR SERVICE THAT HE MET AND MARRIED JEAN.

AFTER HIS DISCHARGE FROM THE AIRFORCE IN 1945 HE BECAME INVOLVED WITH THE ROYAL FLYING DOCTOR SERVICE AS ONE OF THEIR LEADING MOBILE TECHNICIANS IN THE FAR OUTBACK OF QUEENSLAND AND THE NORTHERN TERRITORY.

IT WAS DURING THIS TIME THAT HE BECAME A LICENSED AMATEUR WITH THE CALLSIGN OF VK4SE.

AFTER LEAVING THE ROYAL FLYING DOCTOR SERVICE, HE OBTAINED HIS BROADCAST CERTIFICATE AND WAS EMPLOYED WITH VARIOUS BROADCAST STATIONS AND ENDED UP WITH 2UW IN SYDNEY. HE THEN TOOK OUT HIS CURRENT CALL VK2SG.

FROM HERE HE BROADENED HIS HORIZONS BY ASSISTING WITH THE PLANNING AND EVENTUAL OPENING OF CHANNEL 10 TELEVISION STUDIOS. HE SERVED IN THEIR STUDIO AND EVENTUALLY THE TRANSMITTING FACILITIES.

HE EVENTUALLY RETIRED FROM CHANNEL 10 AROUND 1980.

ALL THROUGH THESE YEARS HE WAS AN ACTIVE AMATEUR, GAINING DIFFERENT AWARDS FOR DIFFERENT FIELDS OF COMMUNICATIONS, AND STILL CONTINUED EXPERIMENTING WITH DIFFERENT ASPECTS OF HIS HOBBY.

IN 1970 SYD WAS RESPONSIBLE FOR THE SAFE COMPLETION OF THE FIRST 8600-MILE VOYAGE OF THE RAFT - LA BALSA - ACROSS THE PACIFIC FROM SOUTH AMERICA TO AUSTRALIA. THE RAFT'S RADIO EQUIPMENT MALFUNCTIONED APPROACHING AUSTRALIA AND IT WAS WITH SYD'S TECHNICAL KNOWLEDGE AND DEDICATION THAT ENABLED THEM TO MAKE THEIR SUCCESSFUL LANDFALL.

IT WAS DURING THE LAST 15 YEARS THAT HE BECAME INTERESTED IN DIGITAL METHODS OF COMMUNICATION AND WAS IN THE FOREFRONT OF ALL DEVELOPMENTS OF THESE NEW MODES. MUCH OF THE ORIGINAL EQUIPMENT THAT WAS USED WAS SURPLUS DISPOSALS AND SYD, WITH HIS KNOWLEDGE AND EXPERTISE, DEVELOPED NEW IDEAS.

HE WAS ONE OF THE FOUNDATION MEMBERS OF THE AUSTRALIAN NATIONAL AMATEUR RADIO TELEPRINTER SOCIETY AND WAS A REGULAR PARTICIPANT IN MANY CONTESTS AND FURTHERED AND ENCOURAGED YOUNGER MEMBERS OF THE AMATEUR FRATERNITY TO BECOME ACTIVE AMATUERS IN THE DIGITAL MODES.

SYD WAS KNOWN THROUGHOUT THE WORLD WITH HIS ORIGINATION OF THE RADIOTELETYPE DX NOTES AND, ALTHOUGH HE GAVE THE ORIGINATION OF THESE
NOTES TO OVERSEAS AMATEURS AFTER ILLNESS FORCED HIM TO CUT DOWN ON HIS
RADIO ACTIVITIES, THEY ARE STILL SENT WORLDWIDE WEEKLY AND KNOWN AS THE "VK2SG DX NOTES" - THEY EVEN NOW APPEAR ON THE NEW SUPER HIGHWAY - THE INTERNET. SYD HAS MANY AMATUER FRIENDS AROUND THE WORLD WHO REMEMBER HIM FONDLY AND WILL MISS SEEING THAT VK2SG CALLSIGN ON THEIR SCREENS. SYD'S PIONEERING IN AMATEUR RADIO HAS GIVEN MANY THOUSANDS OF PEOPLE AROUND THE WORLD A LOT OF PLEASURE.

HE IS SURVIVED BY HIS WIFE JEAN.

WRITTEN BY BILL STORER, VK2EG

SUBMITTED BY PAT LEEPER VK2JPA, SECRETARY, ANARTS

Silent key -- VK2AKC

It is with deep regret that we announce the passing of Cecil Kearins VK2AKC of Dubbo on Monday 18th December.

Cec was well known on the ham bands and was licensed for approximately 50 years. Cec was a keen home brewer and was in the RAAF for 3 1/2 years during his younger days.

from Jan Harvey VK2BNH

Silent key -- VK2LM

It is with a great deal of regret that I inform you of the passing of Len Brennan VK2LM, formerly VK2AMU, of Apex Street, Mount Victoria.

Len had been licensed since 1939 and was active on all frequencies he was allowed to operate on, which included 11 metres, satellite,

slow scan TV and the like. He was well known amongst his peers and was highly regarded in that community.

Len may have been remembered by a lot of people in the district as the owner and operator of several picture theatres in the Gosford and Entrance area and was the first person to introduce hi-fidelity sound and later stereo and surround sound into the theatres for the enjoyment of his patrons.

Len was a quiet and private man but was a man of great science and understood the theories of sound and R.F. He was an avid keeper of sun spot cycle records. I believe that Len was among the first people to discover sun spots and the influence on the transmission and receiving of radio waves.

Len was a leader in technology and was always at the cutting edge, he was the first person to have a packet relay station over the Blue Mountains and I am sure he would be remembered by the packet using fraternity for that. His input into Amateur Radio will probably never be fully realised. Len had a great impact on me and was a true friend and I personally regret his passing.

Len died at the Lithgow Hospital after a long illness with cancer at 4am on Tuesday 19.12.95 and is survived by his wife Betty who is now VK2AMU.

submitted by Paul Robertson VK2GON

Federal news - Interference

Interference Issues regarding interference to amateur activities on the 160m, 2m amd 70cm bands from other services, and from the possible future installation of Windshear air safety radar system in Australia, were discussed at a recent Canberra meeting with the SMA.

As many amateurs well know, interference to repeater systems on 2m from pager systems operating above 148 MHz has been a particular problem for many years. A technical report on the subject, compiled by Will McGhie VK6UU, was presented to the SMA at the previous WIA-SMA meeting last May. An update, again from Will McGhie, on a recent pager interference problem, and its solution, was given to the SMA in November. The SMA said, as a general principle, they will investigate all well-documented interference complaints, and that the priority given to any such investigation is made by the local SMA Area Office.

Recent experience, and cooperation with the SMA, has indicated a number of ways to successfully approach pager problems on 2m. To improve the situation for repeater system operators, the WIA in conjunction with the SMA, will develop a flow-chart and "check box" system as part of a self-managed solution to investigating interference sources to 2m repeaters. Providing a copy of this

check list along with a written complaint should help the SMA to take the appropriate action in the future, when it comes to dealing with such interference.

Recent interference problems on the 160m and 70cm bands, arising from other services, had already been dealt with before the November meeting in Canberra. However, the SMA will in future advise the WIA of any new licences which may affect activities on amateur bands, particularly on bands where amateurs are a secondary service (e.g. 420-450 MHz), and work in conjunction with FTAC to avoid possible mutual interference. This procedure will also apply to Windshear radars, which operate immediately adjacent to the 6m and 70cm bands.

Federal news - exams

Examination System: Revision of the Memorandum of Understanding (MOU) between the SMA and the WIA Exam Service has been under way for more than a year, and the WIA sought advice on progress. In addition, the issue of invigilator requirements for remote area examinations, raised at the meeting last May, was discussed, along with the matter of the syllabus and exam question banks not being in harmony with the current TLSs and Regulations.

The SMA expalined that the many changes which had occurred in the SMA over recent times had occasioned delays and some loss of continuity in the revision of the MOU, but it is actively under way again. An SMA officer was to visit the WIA Exam Service operation in Melbourne before Christmas, to assess and report on current practices and procedures.

Regarding remote area invigilator requirements, the WIA proposed that, rather than using the Income Tax Act definition of remote areas, a definition based on travellling time would be administratively simpler. The SMA said they were prepared to consider this further and asked the WIA to put up a more detailed submission.

The SMA said they were progressing with consideration of the AOCP syllabus and question bank, which the WIA submitted earlier in 1995. Finalisation of the review of the AOCP syllabus was anticipated by the end of January, and the question bank some time later, although no time frame was proposed at this point.

Until the relevant information booklets on the Amateur Service, RIB70 and RIB71, were revised, amateur licence candidates would continue to be examined on the previous regulations, the SMA said.

Other matters discussed at the November WIA-SMA meeting included use of the AX2OOO Olympic Games special event call sign, which the WIA wants to extend the permitted period of operation from one month before and one month after the opening ceremony, to six months or more before and up to three months after; further action

on proposed amateur use of LF in the 150-200 kHz region; and a number of issues surrounding the allocation and use of amateur call signs. Armed with more information as a result of the November meeting, the WIA is developing further submissions to put before the SMA in all these matters.

More detailed information on all the matters discussed at the November meeting will be included in later WIA News items.

Divisional news

Divisional News

On behalf of your Divisional Council, I wish to extend a warm welcome to the following who have been accepted for membership to the New South Wales Division of the WIA:

FULL MEMBERS

NAME CALLSIGN ADDRESS

Gause, M. VK2MGM Barnsley
Berry, D.J. VK2UDB Newcastle
Blunn, J.H. VK2TAT Greenacre
Meinsma, D.R. VK2FIM Charlestown

ASSOCIATED MEMBERS (SHORT WAVE LISTENERS)

Roll, M.R. L21008 Balmain
Wilmanski, W.H. L21007 Auburn
Miller, G.C. L21008 Castle Hill
Unwin, R.J. L21009 Moruya
Pope, B.F.M. L21010 Terrigal

Your Divisional Council welcomes your decision to join the growing number of Amateurs and Short Wave Listeners who are members of the NSW Division, by now all should have received ther new-member's information kit and Certificate of Membership.

Membership of the institute entitles you to receive all the services that are provided for members in their pursuit of the hobby of Amateur Radio.

Should you have any questions, suggestions, or constructive criticism, don't hesitate to contact me, at any time, by one of the following means:

Telephone (02) 831-8450 or by
Fax on (02) 621-1516

I take this opportunity to wish all of you a prosperous, healthy and happy 1996.

Cesar Miranda, VK2TCM
Membership Secretary

WICEN news

WICEN News

Welcome to the first WICEN news segment for the year, and we trust that all members had a safe holiday. As far as we know, there were no activations, although February could be nasty for bushfires.

During the festive season, Santa Claus brought WICEN (NSW) a Web page; it is temporarily located underneath the NSW Divisional Web page, as "http://sydney.dialix.oz.au/~wiansw/wicen/". Please note that it is "still under construction", but links to pages of interest to WICEN personnel are being constantly added. We thank the NSW Division of the Wireless Institute of Australia for their generosity.

Although still early in the new year, the calendar already has several events upon it. The Central Coast meeting, under David VK2UDT, is on Friday, and the Management Committee meeting is on the 20th of this month. The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is on 25th February, and since we will not have the caravan this time then your ideas are requested; please let the Publicity Officer, Dave VK2KFU, know if you can assist. The Red Cross Calling Doorknock Appeal, with Andy VK2XRX in charge, is on 17th March. Another March event is the annual Cave Rescue Exercise at Bungonia Caves, but no details have been forthcoming. Finally, there are the two big annual events; the City to Surf Fun Run on 11th August, and the Hawkesbury Classic Paddle on 26-27th October.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

The December 1995 issue of Australian Video Camera reports that a UK company has introduced a new dimension into the still-new area

of virtual reality. The company has introduced a new VR headset that can generate smells to match the images being projected on the headset video screns.

Tiny cylinders containing "aroma gases" are mixed with carbon dioxide and alcohol and released into the headset under computer control. The headset also contains its own air supply to remove the old smell before the next one is introduced.

We wonder if the Amateur Television community will pick this one up and run with it ...

****

The same magazine also notes that the Israeli intelligence service (hello to all Mossad agents monitoring VK2WI on 10,125 MHz!) has devloped a video camera and transmitter that can be swallowd and used inside the body. The camera, housed in a tiny pill-sized capsule, will allow government agents to locate incriminating evidence that may have been swallowed by a suspect. The capsule even contains its own light source to illuminate the parts most other cameras can't reach ...

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 DECEMBER - 04 JANUARY)

ISSUED 05 JANUARY

SUMMARY
Date 29 30 31 01 02 03 04
10cm 76 75 75 75 75 81 85
A 2 7 7 5 7 8 (4 estimated)
T 4 14 10 -2 19 24 16

SOLAR ACTIVITY WAS LOW ON 3RD JANUARY, AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 29TH TO 30TH DECEMBER, AND QUIET TO UNSETTLED FOR THE REST OF THE WEEK.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH FREQUENCIES DEPRESSED TO 20 PER CENT DURING NIGHT HOURS ON 31ST DECEMBER, AND ENHANCED AT TIMES TO 15 PER CENT ON 3RD JANUARY. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 3RD.

FORECAST (05 JANUARY - 11 JANUARY)

SOLAR: VERY LOW TO LOW

GEOMAGNETIC: QUIET TO UNSETTLED

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Gladesville

Now for some news from the Gladesville Amateur Radio Club --
The club would like to wish the VK2WI listeners all the best for 96 and to bring you some dates and activities for your diary.

Tonight (Sunday) VK2TVG resumes the relay of the VK2WI news session.

The live Test Transmission resumes next Wednesday at 7.30 pm, originated at VK2TVG and relayed in Sydney through VK2RTV on Channel 35. The Australian Amateur Television Club provides a relay through VK2RFM at Oakdale on 1250 MegaHertz and the Central Coast Amateur Radio Club relays through VK2RTG on 444 MegaHertz. Both groups also provide a relay on Sunday evening at 7 pm. Television Gladesville thanks them for their support in providing the extended coverage.

VK2TVG is also radiated in Sudney at 7 pm through VK2RTV on Channel 35.

Part of the Amateur Radio hobby is to keep one's technical knowledge refreshed and this is the philosophy behind the Gladesville Test Transmissions.

On Wednesday and Friday the first technical segment in the transmission is from the Club's lectures in NAOCP and AOCP theory - an opportunity for newcomers to prepare for that future exam and for the older licence to brush up on some theory.

Our hobby covers broad interests and the Crew at VK2TVG feel that the test transmissions help provide an understanding of the technology involved. Please check us out on one or more of our transmission evenings.

The first Gladesville Club meeting for 1996 will be Monday 12th February at 7.30 pm.

Country listeners visiting the forthcoming Central Coast Field Day are invited to call into the club stand, its location will be advised in a future VK2WI broadcast.

Again best wishes for 96 from the Gladesville Amateur Radio Club

Club news: Veterans Group

The next meeting of the Veterans Group at Amateur Radio House will be on Thursday February 15th 1996 from 1100 hrs to 1400 hrs and thereafter on the third Thursday of each month.

No meeting is organised for this month January.

Season's Greeting to all

I don't know Drew - another coax pinning topic ?

Is this your only answer ? I thought that this in CB topics was one thing but here I see you signing an amateur callsign. I guess you are still so new to the hobby that you haven't outgrown the CB ways.

How any amateur radio operator could be so immature to wander all over promoting the pinning of coax is beyond me. I guess others are right in that some no-coders really are CBers in disguise.

Did anyone else catch his latest (as far as I know) magazine startup
dedicated to COLD FUSION!. I bought a copy of VOL1#1 (about a year
ago) and put it in a plastic bag for posterity. Either way cold
fusion goes it's going to be a major curiosity years from now.

The mag was filled with articles by Dr. mumble, PHD (don't ask in what
or where) claiming to have made the breakthrough. The mag also had DIY
cold fusion parts kits. I don't mind basic research in anything as
long as the review process is open and responsible. In my unexpert
opinion Dr. mumble was not publishing key details, I'm afraid.

If you mean Wayne is a muckraker, I'm sure he'd be proud to be associated
with the likes of Upton Sinclair. Wayne sees himself as a gadfly, pointing
out the ills of society, in particular amateur radio society, and to be
very specific, the failings of the ARRL. AFAIK, he's still a member, and
members have the right to criticize the organization when they think it
is putting a foot astray. OTOH, if you want to put him in the company
of Jerry Rivers (aka Geraldo Rivera), then he might be insulted, though
the characterization might fit better of late. Wonder when Wayne will
discover Al Capone's vault? :-)

"The men with the muckrakes are often indispensable to the well-being
of society." -Theodore Roosevelt

If someone doesn't spread the word that the emperor has no clothes,
he'll just continue to parade around starkers for all the world to
see. The ARRL monolith needs a critic, and one with a circulation
large enough to make an impression. Wayne's all we've got (more's
the pity).

It's too bad this thread has such an objectionable subject heading for what is an otherwise interesting discussion.

It would seem that protocol on the phone bands has evolved in a somewhat less than systematic way. It varies from region to region, and from band to band, probably due in part to groups or individuals who reside on a particular frequency, and feel the need to key up and criticize every time someone says something a little different.

It would make more sense to start practicing a more universal phone protocol. It doesn't make a whole lot of sense to have to use different terms whenever you change bands. Granted, calling CQ on a 2 meter repeater seems unnecessary, but it shouldn't be considered an egregious offense on the calling frequency.

One purpose of the Amateur Service is to provide a pool of trained operators. Why not train them in proper HF phone protocol while they are still on the VHF frequencies? Most folks learn by listening. They do what they hear others doing. Each operator also seems to have a little of his own personal style. This is a good thing I think.

What's appropriate on 20 meter USB should not be considered inappropriate on VHF. A little greater tolerance by some would also be nice. Probably the most inappropriate kind of protocol is to key up a say something like "we don't say 'over' on this here repeater". People will learn by example, and rudeness is not a particularly desirable quality to teach to new amateur operators.

When will we all wake up and realize that good amateurs were NEVER made by the examination system that happened to be in vogue at any given time.

ALL good amateurs became good amateurs by watching other good amateurs do it right. (You can classify that as a "flat statement".)

Newcomers imitate what they hear and see on the bands.

So be an example... get on the air and do it right, or take a newcomer under your wing and play Elmer. (Or continue to pee and moan here about how "they don't make 'em like they used to make 'em when I became a ham".....) In other words, go out and make 'em like they ought to be made.... do you remember?

For which service and what destination? How traffic is passed varies from
service to service. I am in Navy MARS and all is passed either via PACTOR
or voice. Some members do have email and would probably accept outgoing
3rd party traffic via email, there is nothing to prohibit that. It would
be up to the individual member. I don't know about the other services but
I would assume they are the same.

9G - [Ghana] PA3GBQ (Steve) is now active as 9G5BQ.He will be active
on all bands.QSL via is Homecall.
CY0 - [Sable Isl.] The 1996 Sable Island Dxpedition Team reported that
they have passed 80% of the paperwork and they are waiting for
the final authorization but callsign has been already issued .
The callsign is CY0AA and the operation his scheduled for late
June 96.The most important thing is MONEY and they ask everyone
, DX Clubs and Associations to send donations if possible to :
Kenneth S. Scheper, 5875 Cedaridge Drive, Cincinnati,
OH 45247-7438, VOX/FAX 513-598-6887.
They are now raising funds , if they cannot raise enough the
DXpedition will re-schedule for 1997.
The Operators are : VE9AA,WA8JOC,W9OEH and more ...
HK0_iota- [Colombia] HK0/DF4UW will be active from Santa Catalina Isl.
IOTA NA-049, starting Jan 9 to 24 .
J7 - [Dominica] From January 20th to 25th a group of US operators will
be in Dominica.Operation from 10 to 160 meters and RS12 Sat.
They will be also on RTTY.Callsign not known yet.Operators are :
Scoot N9JCL, Tom K0SN, Paul WC9E, Jim AA9PB.QSL via K0SN.
JD1 - [Ogasawara Isl.]JQ1SUO/JD1 is QRV from this Island and has regular
scheds to work Europe on 3.795 Mhz at 20H40 UTC...Look for him !
KH4 - [Midway Isl] NH6D (Bill) is returning to Midway on January 15th
where he his planning to stay for two weeks.Bill will operate on
```

40,80 and 160 meters , CW and SSB.QSL is via KL7H/W6 (Dick).
Dick also has the logs for Bill's December 95 KH4 operation.
At this time 2,000 QSL cards were sent for December operation.
PR8_iota- [Brasil] There as been some activity from SA-016 , the station is
PS8YL/PR8 (Teresinha).She will be active till January 17 !
QRV freq. are 14.260 Mhz , 21.225 Mhz and look for her on the
Brasil DX Net.Operation from 20 to 40 meters.
QSL via : Teresinha Nobre , Rua C 2103 , Jardim Aeroporto ,
64200-970 , Parnaiba/PI , Brasil. (PSE enclose 2IRC).
The Reference for this Isl. : IOTA SA-016 & DIB-07.
T31 - [Central Kiribati] VK2BEI will be QRV from this country as T31DP
or T30DP/T31 starting 9 january for a few weeks.He will be QRV
ONLY ON 14 MHZ ! The QSL manager is VK4CRR (Callbook Address).
V2 - [Antigua] Operation is expected from this country by a group of
US operators ONLY on 20th January.QRV from 10-160m , SSB+CW+RTTY
The callsign is not know yet ! Operators are : N9JCL,K0SN,WC9E
and AA9PB.QSL via K0SN
XU - [Cambodia] VS6WV (Mike) left to this country on Jan.6th and he
his QRV on 40,80 and 160 meters and maybe some operation on 20
meters SSB.The callsign is XU6WV and QSL goes to P.O.Box 2011
GPO , Hong Kong.
ZP - [Paraguay] Special event Station will be on the air from 23 to
30 this month signing ZP73Y.QSL to ZP5WYV.
ZS6_iota- [Robben Isl] This Island , located in the Table Bay (Cape Town) ,
will be activated from Jan 26th to 29th.Operation on all bands.
A local 2m repeater will be on the air . The IOTA ref. is AF-064.
DXpedition info :
Call sign : ZS64RI IOTA nr : AF-064

NPDXG Bulletin #10 [2/4]
Pirates -> Info on VK0WH SLIM : There are three apparent time slots for
the Slim in the last VK0WH log period (26 Nov thru 31 Dec 95):

1. 5 December 1000 UTC 7 MHz CW
2. 16 December 1000/1100 UTC 7 MHz CW
3. 25 December 1100 UTC 7 MHz CW

There is no idea of the QSO's made in those periods . Be carefull ,
all other QSL cards received were replied ...

Also on ZL there are some pirate operations , ZL9AI is active again (30m)
claiming to be a YL.The QSL route given was the ZL QSL Bureau

DIB -> BRAZILIAN ISLANDS AWARD , This is the latest version of the D.I.B.
List , dated December 31 , 1995 :

SB DXNEWS @ WW <CT1ENQ $NPDX.010W3
NPDXG Bulletin #10 [3/4]
8R1K QSL route -> Marko Myllymaki (AB6NJ/OH6DO) reports that the QSL route to this station for 1993 SSB , 1994 SSB and 1995 SSB & CW , CQ WW Contest operations are via OH6DO : Marko Myllymaki, Kurppakuja 3, 63700 AHTARI, Finland.If you have already sent QSL to OH1VL don't send another request , those will be answered too.

Faial Island -> This Island good for DIP with the Ref. AZ-007 and IOTA EU-003 as been active all Modes all bands by Marco CU7BC, a member of NPDXG, Marco is already on CT1-Land !

IOTA OC-136 -> VK3UC/p as been very active from the IOTA Victoria State Center Group OC-136, he has been noted with a good signal on 14260 at around 13H00 UTC.

Antarctica -> EM1KA is operated from Faraday Base on Argentine Island IOTA AN-006.He has been noted around 14260 and 18145 at around 08H00 utc. QSL to 9H3UP. DXCC is Antarctica.DS1BMJ is the call sign from the Korean operation from Antarctica.LU1ZB is on Anvers Island (AN-012)
LU6Z is The Argentine South Orkneys Dx'pedition, they have been noted with very strong signals also around 14260 at 10H00 utc.
LZ0A is the Bulgarian Antarctic base at the South Shetland Islands IOTA AN-010, they have been very active. QSL to LZ1KDP.
ZX0ECF is active from the Brasilian Antarctic base Comandante Ferraz on the South Shetland Islands.

QSL status on Block Island DXpedition -> N1TMG/1 said that the QSL cards for his DXpedition to this Island are being printed and he will start sending them out as soon as possible.In the next Dxpedition to Block Isl. is scheduled to this Summer.QSL via his homecall N1TMG.

Brazilian Oceanic Island Calls ->

PY0A = Abrolhos Island (Not good for DXCC)
PY0F = Fernando de Noronha Island
PY0R = Rocas Attol (belong to Fernando de Noronha Island)
PY0S = Saint Peter & Saint Paul Rocks
PY0T = Trindade Island

IOTA News -> VK6BFI, VK6UE and VK6KTN will make a third attempt to activate
Margie Isl.in the Abrolhos Group Jan 25-31, a potential New-one for IOTA.

563. Re: TV disturbs radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-10 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <4d11kq$b01@mrnews.mro.dec.com>
Source record: 232397

In article <98@ibbs.av.org>, js@ibbs.av.org (Jeff Stillinger) writes...
>I did this a while back. It works really well. With my TV's I turned them
>all off! What I did was setup education time with the kids and wife. For
>three hours every night the kids do homework, read books, or make music. I
>did ham radio. The rule is simple, find something you like to do other than
>watch TV, and do it.

I'll second that. I stopped watching TV about 3 years ago, before I got married. Now my wife and I only watch the occasional movie on the VCR. It's GREAT, one of the best things we ever did for ourselves, and I highly recommend it! The funniest part is, we're much BETTER informed of world, national, and local events than ever before, because we don't have to sift through all the TV hype and outright lies to get to the meat. We both have plenty of time to pursue our hobbies... in my case, building a QRP 2-band HF station from scratch, now nearing completion. I learned more about radios than I ever thought possible.

So all you folks who want a technical ham population - do something! Shut off the toob, warm up the soldering iron, and get to work. Build your next radio instead of buying. It's fun, you'll learn a lot, and have the satisfaction of using a piece of equipment you put together yourself. You'll even have something to talk about besides what's on TV (OJ trial? Who cares?).

564. Can I turn off battery saver on TH-25/45?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-10 00:00:00 UTC
From: scw1118@hertz.njit.edu
Message-ID: <1996Jan10.043541.18171@njitgw.njit.edu>
Source record: 232398

Hello all and thanks for reading this. I own a Kenwood TH-45 440 handheld. I figured out how to program it without a manual (I don't have one). When it is left unattended for about 30 minutes, it beeps and then shuts off automatically. Does anyone know any way to disable that feature. I use it to monitor a rather quiet repeater and it keeps shutting off on me.

Thanks in advance

Steve Walko scw1118@hertz.njit.edu

Message-ID: <BrMFHGn.sanderman@delphi.com>
Source record: 232405

Maybe a note to the MDC (Maryland/DC) Section Public Information Coordinator would do some good. Though I don't see one listed on page 113 of the January 1996 issue of QST, your Section Manager, Bill Howard, WB3V, (packet @ KA3RFE, email wjh@ideas.com and phone 410/551-6775) should be able to direct you in the right direction (or maybe accept you as a volunteer for the position!). Promotion of the amateur radio "arts" with the local press has a great opportunity with this major storm. Let's all hope someone is working on it!

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

Give it a try, and let me know how you like it (we are still beta testing)

Hey I could not agree with you more on this one! People should be made aware of what
Amateur
Radio does for the community. It could do nothing but help us out.

I wrote two articles. He paid the first, never paid the second.
I wrote to my editor Joyce Sawtelle, and she never responded. It
may not be Wayne, and it may be Wayne, but my advice would be to
never accept an offer from Joyce, only one of the others. My real
advice would be to avoid WGE and everyone on the staff page. They
are all crooks. Industry agrees, and has begun it's pullout on
supporting these thugs further.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 JANUARY AND FORECAST FOR 11 JANUARY - 13 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 09 Jan
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.5E+06 (normal)
X-ray background: A3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Jan 12 Jan 13 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Jan: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 09 Jan
Learmonth 4 1111 2122
Fredericksburg 3 2
Planetary 5 1

Observed Kp for 09 Jan: 0000 1011
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Jan 5 quiet
12 Jan 15 quiet to unsettled, with possible active periods.
13 Jan 10 quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

10 Jan Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Jan Normal Normal Normal
12 Jan Normal Normal Fair
13 Jan Normal Normal Fair
COMMENT: Good HF conditions expected for today. High latitudes
may experience slight degradation on 12 January.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
10 Jan 26

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
11 Jan 20 near predicted monthly values
12 Jan 20 near predicted monthly values
13 Jan 20 near predicted monthly values
COMMENT: Good HF conditions expected for today. A slight degradation
in HF conditions may be experienced for southern region Australia
on 12 January.

I see we have yet another one on here who cannot read a callsign database.
I am not a "no-coder." Better look again; you're making yourself look
foolish with your (incorrect) assumptions.

It really bugs the $%^#!! out of you old guys that I don't "fit" all your
pre-conceived notions and tidy little package (no-code tech, technically
illiterate, little radio experience, etc.), about who a proponent of
eliminating the Morse requirement is supposed to be, doesn't it?

>5-1/2 x 7 inches -- some of the DX cards are quite large. Definitely do
>not send the small standard size envelopes -- they are just too small.

The NJDXA will take just money, and provide "credits" in the form of
envelopes and postage. This is what I did over a year ago. I sent $20
and received 50 credits. I don't know how many credits $20 buys now
since last years postage increase. Each mailing takes 1 or more credits
depending on how many cards are being sent. My mailings have always
taken 1 credit, and usually contain 5 to 15 cards.

As part of the return address on the envelope, it says "You have _____
credits left", so you know when it's time to send more money. They also
ask, that if you can, you provide them with a supply of stickers with
your address on them so that they don't have to hand address the
envelope.

Dog X-Ray 1.0d1 is a free TNC interface for the PowerMac and the PK-232. Its primary purpose is to aid the DXer in perousing the DX packet cluster. It currently runs only on power macintosh and only supports the PK232. Our goal is to evolve DogXRay into a full featured DX cluster interface/logger, with varying degrees of alert, analysis, and logging.

The d1 version simply provides TNC interface capabilities and DX spotting announcing through MacinTalk.

DogXRay should be available on the InfoMac mirrors by the time this message is distributed. Please check it out and feel free to send me e-mail with comments and or problems.

DogXRay 1.0d1 is freeware, copyright 1996 by Joe Mastroianni, AA6YD

592. US Hams want to operate in UK

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-10 00:00:00 UTC
From: probert@nspace.cs.ucsb.edu
Message-ID: <4d1t4q$g3u@nspace.cs.ucsb.edu>
Source record: 232426

Two of my sons have the opportunity to go with me
on a trip to Great Britain later this month.

All three of us are licensed U.S. hams, and we would
like to operate over there (at least on two meters).

Questions:

Anybody know what we need to do?

Are 144-148 valid amateur frequencies in the UK?

Are most 2m repeaters open like they are here?

Do they operate with PL tones like in the U.S.?

Anybody have a list of repeaters near London and Bristol?

Plus

My oldest wants to operate 2m aboard the aircraft while
overflying the U.S. Is my understanding correct that:

Operation of radio equipment is not allowed within
15 minutes of takeoff and landing under any circumstance?

Otherwise operation while airborne only requires the
consent of the captain?

Thanks.

From: Avery Russell <agross@erols.com>
Message-ID: <4d0u79$crs@news.cais.com>
Source record: 232427

I have asked this question of people here in Montgomery County MD, and have NEVER agreed with their answer. The DC area had been snow covered and shut down for the past three days. With hours and hours of commercial news coverage discussion how volunteers with four wheel drive vehicles where helping out the area hospitals, there was not even ONE mention how the amateur radio community was working with the drivers of these vehicles as navigators and supplying crucial communications. As amateur radio operators we need not have to boast, but a little recognition goes a long way toward community goodwill. In an environment of increasing regulation and antenna restrictions, shouldn't the public know how we can be of help in trying times? I disagree with the people who don't believe that amateur radio shouldn't be in the news media. It is wrong and doesn't make sense. What do you think. I believe the folks at Montgomery County RACES did a great job here in Maryland. Why Shouldn't their efforts get some press.

Hi there
I dont see why you should have a problem bringing your two HT`s into the uk although you will need to apply for a reciprical licence.

As to the 1750hz tone burst a varied pitch whistle will open most of the uk repeaters others require the tone and voice before there are opened.

I cannot speak for Air Force or Army MARS services, but Navy MARS members
are permitted to send ONLY administrative traffic by e-mail, not message
traffic.

>jococour@cdsnet.net

Not hardly! With all due respect to the Mr. Cheek and the scanning community much of his information is based on Mr. Parnass's work at Bell Labs. You'll see things in Bill Cheeks books that look real familiar to Bill Parness's work with due credit to him...this leads me to believe that Mr. Cheek is purely in this for his own interests...it's easy to copy and compile. Much of the information in his compilations can be easily found on the internet and are authored by individual certainly not credited in Bill's books.

Obviously he like to prolong the controvery here on the groups becasue it more publicity for him. Here's a though to ponder...do you think it's actually him logging on as an alias?

Let's get back to group theme and forget this fool.

Yeh it looks like its sunk into more then just one head...

>VOTE FOR BILL CHEEK:
>--------------------

>Charles Copeland

Who the Fuck cares about the Publications!!!

Man are your idiots missing a few screws.

What Is Bill a God or something? Give me
a fucking brake.

So he has a book out. wippieeeeee Big deal. Its not hard to
do the same kiddies! Becides does that make someone right?

Two seperate issues here guys WAKE UP!

rec.radio.scanner
and
some book

(mods that if you can figure out yourself how to do with
a service manuel then it offers some help)

Whats this Vote CRAP?? More fuel??

As for the Three people taking issue with Bill, better think
again. Not everyone is as stupied as the rest of you and has to
always add his two cents worth. Somethimes it better to say
nothing then to say anything.

As for Andy and Bill They are both trouble makers.

They are acting like children. He said she said. Both want the
last word. Personally I beleave Andy has started the whole thing He
sure has with me in the past. So I'm talking with experience. But It

takes a bigger person to end it. Andy has. Bill continues. So who's better?? None they both are looking for attention and know how to get it.

You kids are just adding fuel to their little flame.

Bills Book if you find it useful is a seperate issue from this newsgroup. Remember that. You talk about how one contributes to this newsgroup then look at the content of their messages not what they are selling.

Wake up Kids Think about what you say before you say it!

g_reed@icon.net (Glenn Reed) wrote:

> It is tiring seeing all of the messages addressed to this feud.

I take it you think that feeling is legit. Ok. I can handle that.
Now can you (anyone) handle some of the things I am tired of?
There's the rub. One person (not especially you) tires of something
and expects the right to quell it with a command or a plea. Others,
like me so far, simply don't express what we're tired of. When the
tables are turned, however, it's suddenly a different story.

> I don't have a problem using the delete key for messages that are not of
>interest to me,

Right on! Me, too. Or not download those messages in the first
place. Which resolves the hypothetical problem you raise next.

>but I understand that some users of this newsgroup pay by the
>message. This must be particularly irritating to them.

Whooaaa......(1) they are getting ripped off, if that is the case.
What are the bona-fide situations where newsgroups are available only
by the message meter? WHO would tolerate such a thing? Do they not
have alternatives? And if not, then (2) Some newsgroup reader/editors
allow picking and choosing off-line those messages to be downloaded.
The problem you raise here is not one that should merit condescending
by the rest of the crowd. Horses are not allowed on the freeways, and
in many states, neither are bicycles, pedestrians, and underpowered
vehicles (motorscooters).

> That's it, no flames or no finger pointing, just a hope for a reduction in
> broadcast hostilities.

That's cool. But the cessation MUST begin by those who initiate it,
no? I mean.......HOW can the recipients of this bullshit reduce it?
Could the 6-million victims of Hitler's holocaust have reduced the
number of deaths by.......being more placid and peaceful? Ri---ght.

The best possible solution, methinks IMHO, is for those who START it
to STOP it. Well, it is verrrrrry interesting how three of the
biggest perpetrators and continuers of this bullshit are Peter (PjB)
Breath, Michael Alexander, and Andy Moss, though Moss appears to have
ceased and desisted now....and he WAS the ONLY aggressor at one time,
not two weeks ago. HE stirred the shit; he fanned the flames; he kept
it smoldering and buring for a year. And now he's made a graceful
exit leaving Peter (PjB) Breath and Michael Alexander to continue his

dirty work.

Far better you express your hope THESE TWO stop and then see what happens if, and when they do. I have taken steps to start doing my part, but so long as they keep it up, you can't expect me or anyone else to "let it go". No. They will stop. And my resolve on this is carved in basalt and granite.....vote or no vote.....one against a million or a million against one. The record and the facts speak for themselves. Neither Breath nor Alexander had ANY call or provocation to jump in, much less continue these hostilities.

Please address your comments and hopes to THEM where the bullseye stands out like a sore thumb. Shooting from the hip into the dark cannot hit home. "Home" is where I told you, but don't take my word for it. Check the record. Ask around.

Thanks.

The objection is how YOU took a flying leap of faith, unprovoked and unneeded, and landed into a whole world of shit. And then had the medicine balls to cry foul and pretend innocence. You had no call to zero in on me when I showed up for Andy Moss. I went for HIM; not you. I didn't know YOU from Waltzing Mathilda at the time.

And then to make matters worse, you're STILL involved in something that never pertained to you; never involved you; and never provoked you. You've done painted yourself into a corner....and instead of seeing where you went wrong, you're STILL lashing out.

Mr. Alexander, you were and remain categorically OUT OF ORDER.
That, sir, is the objection. Like it or lump it, that's the record.

Excuse me? Beg your pardon? You get down and state EXACTLY what you
think is Mr. Parnass' work. Better still, you get HIM to confront me
here, if HE thinks I plagiarized his work. You understand me? I'm
getting "virtually" pissed at this crap, first initiated by Moss and
then you. I don't plagiarize, period. I had never heard of Mr.
Parnass during the course of my first two books, and there is nothing
in the 3rd to even resemble his work. But not in the first two,
either. Why don't you let Mr. Parnass vocalize this shit if he thinks
it. You certainly are in no position to speak for HIM or me. And if
Mr. Parnass published anything at all that resembles what's in my
books, it is possible that he got the ideas or the procedures from ME.

You never looked at it that way, now did you?

> You'll see things in Bill Cheeks books that look real familiar to Bill Parness's work

Like what? What "things"? Put up or shut up. Don't pop off your
mouth unless you can back it up. Spit it out. Task me with your
specific accusations right here. I will address each one. Otherwise,
the diarrhea of your mouth is dribbling down your shirt from that hole
in your lip.

>with due credit to him...this leads me to believe that Mr. Cheek is purely in
>this for his own interests...it's easy to copy and compile. Much of the

If these mods are on the Internet, then they were plagiarized from my
books. I know the source and history of every item in my books, and
either credit was rendered to the source, or I did the development and
research! Without exception. If you bothered to READ, you'd see this
to be the case. So put up or shup up. dingleberry!

>Obviously he like to prolong the controvery here on the groups becasue it more
>publicity for him. Here's a though to ponder...do you think it's actually him
>logging on as an alias? Let's get back to group theme and forget this fool.

Go ahead. That's your business. But when you dabble in libelous
statements, you and me are going to do a little rockin' of the boat,
and I hope you can swim.

Now let's set the record straight about Mr. Parnass. There was ONE instance where I may have published something of his. It was in a column for Monitoring Times a couple or three years back...where a reader sent me a "procedure" for VLF tuning an ICOM R-71. I published it in my column. A few months later, Parnass told Monitoring Times the procedure was his. As far as I am concerned, it's hearsay and unsubstantiated, but we apologized and that was that.

Since then, I have been reluctant to accept ANY outside input for further publication, because I have neither the time nor the resources to track down every little tidbit of information that comes my way.

However, you or Mr. Parnass should get down and dirty with what you've just shit out of your mouth above, because this is one area I am NOT going to take sitting down. Moss started it; you're keeping it going; so ask me specific questions and let's get this resolved. NOW.

Hi all..
Does anyone know of a Kenwood auto tuner problem?
I know of a rig that will draw lots of current when you get to 20 thru 10 m and the AT will not tune for about 5 or 10 min. Then, it is fine.
On 40 and 80m there is no problem.
Has anyone ever heard of this problem or know what it may be?
I am think the tuner but I dunno.
Also, any good, fast Kenwood service areas near Cleveland or Pittsburgh?
thx and 73s

They are supposed to sell stamps and envelopes. Sens a SASE to find out rates. You also could send a stack of SASE -- I recommend no smaller than 5-1/2 x 7 inches -- some of the DX cards are quite large. Definitely do not send the small standard size envelopes -- they are just too small.

I also recommend that you put no more than two ounces worth of postage on an envelope until you get a little experience in knowing how many cards to expect. Two ounces is $0.55, and will get you about 12-14 cards.

Hope this helps!

Aloha from the 50th State!

Wayne, NH6GJ
Manager, KH6 Bureau.

Either should be OK. Actually, there would be nothing wrong with hams
using 10 codes...it simply would not be "HAM PC"...but it is more
correct for hams to use voice "10 codes" than to vocalize the
telegraphy Q codes (just IMHO). But in saying that, I used to live in
Miami and believe it or not, Metro Dade (Miami) was using "Q" codes,
not 10-codes.

Could someone tell me how I can use the ax25-utils to set up a default
route for ax25 as follows :
==> all packet have to go by default to ON1KUL-10 VIA ON4CP-6
I tried to do this with axparms -add 1 ON1KUL-10 ON4CP, but all the
packets for ON1KUL-10 go directly to it instead of VIA ON4CP-6...
We have been searching on this for several hours now, but we can't work
it out... Who can help us with this please ??
Thanks for the reply.

Emmanuel.Lambert@cs.kuleuven.ac.be

(PLEASE send a copy of your reply via e-mail. Thanks)

622. Element spacing on a beam antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-10 00:00:00 UTC
From: Anthony_M._Werdein.Wbst139@xerox.COM
Message-ID: <"10-Jan-96.11:39:03".*.Anthony_M._Werdein.wbst139@Xerox.com>
Source record: 232488

Can any one help me?
Trying to homebrew a simple 3 element 1/4 wave beam antenna, and using the formula that the reflector element is 5% greater than the driven element, and the director element is 5% less than the driven element. My question is, what should the spacing of the elements be from each other, and what can the boom be made of, eg. wood, pvc, etc?
I just remembered that somebody said that the impedence at the driven element would be 25 ohms, would that be a correct assumption, or would that be frequency dependent, or specific? If so than a balan would be considered necessary? The possible wave lenghts I was going to try these beams on are 2 meter, 70 centimeter, and 23 centimeter. Any help would be greatly appreciated.
73
Tony
N2TRV

ps I was also wondering if the elements composition (brass, copper, etc) and diameter might or would play a part in the part of the formula too, would I be correct?

Plain everyday English is appropriate in most voice ham and CB
contacts. QSL, OM? (Damn... there I go again!)

--Leigh/KM6JE.

I disagree. Verbal shorthand and proper procedures are useful in
voise radio communications, and using telegraphy abbreviations is very
approriate for amateurs, especially for international communcations,
even with other native English speakers. It's a common base of
understandable phrases, and most phrases spoken by someone with a
strong Glaswegian accent (for example) are difficult enough to
understand.

tsmith@ici.net (Tim Smith) writes:

BC>Bottom line is that you have an axe to grind and we're going to
BC>get to the bottom of it. I can't imagine what, but your lack of
BC>candor and vicious attack is more than provocative.

TS> But doesn't your reation to my lack of candor tell the populas
somethhing?

It should scream I am not afraid to deal
with your allegations up front, in public.
When a person has something to hide, he really
doesn't want it laundered in public, now does he?

Kind of like how you don't want to discuss
this on the public forum anymore. You're a
sleazeball liar and it is probable that I
can prove it with facts if we deal in public
where you spewed the venomous lies.

TS> Most personalities would simply ignore an alegation
TS> if there were no truth...

Would they now? Have you ever wondered why there are
so few or no "personalities" live and up front on the
radio newsgroups? Do people lie about them, too?
No wonder they're not present.

And it depends on the allegation. If you spouted
that I knew nothing about scanners, that would be
laughable and ignorable. To accuse me of plagiarizing
in general, is in-between. Maybe good for a chuckle
and a retort. To accuse me of plagiarizing Bob Parnass'
work is utterly despicable; not funny; and not ignorable.

Furthermore, your lying casts a pall over Mr. Parnass, too.
You see, questions immediately arise out of your mindless
thoughtlessness:

"Does your allegation that I plagiarized Mr. Parnass'
work come from YOU, or does it come from HIM?" "Did you
hear something from HIM on this note?" "Is HE saying
I plagiarized his work?" If HE said it, then I need
to deal with HIM.

Plagiarizing is WRONG. If a wrong has been done, then
it needs to be made right somehow. I don't know what
needs to be made right until it is established that
you're lying or telling the truth. You can't possibly
be telling the TRUTH unless you heard it from Mr. Parnass.

If so, I need to deal with *him*; not you.

Yet, in my good conscience and knowledge, I have not
plagiarized any works of others, and it is a gut-shot
that you blew Moss's trumpet. This matter now needs a
resolution.

When a lying sonofabitch steps over that fine line
between harmless and harmful, all bets are off. Your
spew is designed to cause me harm and loss. I am not
playing to the crowd, Smith. I am taking to YOU. But
you spewed your venom in public; we will resolve it there.

I am just a dude, Smith. I have a life, a livelihood,
and a family, all of which are within the target of your
vile, nasty lies. You went for my juglar; the kill.

Pardon me if I counter....not with lies, but with truth.
And I will deal with it until the matter is resolved.

In public.

Yep.
Just make SURE to put VB4 in a seperate directory.
As an unsolicited comment, I wouldn't bother about the 16-bit
version.

The only common ground you'll find is that VB3 and VB4 share a
common "VB.INI" file. The MRU file list will contain whatever
you opened last in either.

==========
I say:
The ham community constantly moans and groans about an alleged lack of favorable publicity, usually blaming the media for not paying attention to their supposed contributions to mankind.
Well, as a newspaper editor here in blizzardy Maryland, with four publications, I have yet to hear from any amateur radio operator, ARRL official, or grateful soul saved from the snow by a ham and his handheld as to these selfless acts. I'm not denying they actually took place; but instead of griping on the Internet, why didn't you call your local newspaper and inform its reditors of the assistance rendered by hams during the emergency? Editors, after all, do have more pressing chores than to sit and wonder whether the local ham (if he even knows what a ham is) community has rendered a service during the Blizzard of `96. They have to be told! If you didn't tell, don't fault them.
As a ham, I've long wondered just what it is these ARRL section PIOs do. I have yet to hear from one in two decades (excluding the brief time I acted as one, hi). Someone should tell these appointees that part of their job should be informing the local press of good human interest stories involving ham operators. The occasional press releases from the ARRL on what it considers big issues are generally of no interest at all to local news editors -- a call or press release involving the activities of local hams (ie, hams in the newspaper's or radio station's immediate area) would be of interest.
Don't complain, do something!

73,

John KA3DBN

Greetings Matt:

I usually use a PC but have used a Mac on a few occasions. The
software has been Kermit (a Columbia University ackage),
MacPacket, and Red Ryder. Don't know what is now available, but
I'd guess any communications (modem) package would do.

The TNCs have been Kantronics' KPC-2 and KAM, MFJ, and PacComm.
All work well with the software described.

As I recall, all of the above packages required minimal computer
power ... a 512K if I recall correctly.

Hope this is some help.

Good morning. It's Sunday the 14th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Barnsley and District Amateur Radio Club is co-ordinating a coach trip to Friedrichshafen in June on behalf of the RSGB. The Friedrichshafen 'Hamfest' is Europe's largest amateur radio exhibition. The coach will depart on Wednesday the 26th of June and return on Tuesday the 2nd of July. Pick-ups can be arranged at pre-determined locations en route. Places are allocated on a first come, first served basis so contact the organiser Ernie Bailey, G4LUE, without delay. He is available on 01226 716339, or 0836 748958, between 6.00 and 8.00pm.

A new award in memory of Cyril James, G3VVB, and aimed at the home constructor of microwave equipment, will be presented for the first time at the RSGB VHF Convention on the 18th of February. If you have an item of home-made microwave equipment and you are proud of the way you've constructed it, then why not bring it along to the Convention and enter it in the competition? The equipment can be constructed from any design, or from a kit - what the judges will be looking for particularly is quality of construction and finish. If you cannot attend the Convention in person, you may send detailed photographs and a written description to Steve Davies, G4KNZ, whose address is correct in the RSGB Call Book.

A new RSGB Liaison Officer has been appointed for the county of Wiltshire, until the next session of RLO elections later this year. He is Ivan Rosevear, G3GKC, whose address is 20 Christchurch Road, Bradford-on-Avon, Wiltshire. The postcode is BA15 1TB, and his phone number is: 01225 863622. RLOs are available to help and advise RSGB members locally.

The Radio Amateurs' Invalid and Blind Club - RAIBC - is keen to hear from blind amateurs who would like to receive tape recordings of readings from technical magazines. On offer are selections from RadCom, Practical Wireless, Short Wave Magazine and others. The service will be free of charge but those participating will need to supply cassettes. If you are interested, please contact Shelagh Chambers, 78 Durley Avene, Pinner, Middlesex. The postcode is HA5 1JH.

The annual Guides 'Thinking Day on the Air' takes place over the weekend of the 24th and 25th of February. A pack is available from RSGB HQ consisting of a list of participating special event stations and details of the countries which permit third party Greetings Messages during the event. If your group is participating in Thinking Day on the Air and would like a pack, please send an A4-size self-addressed envelope, with

38p in stamps, to Mrs Eva Telenius-Lowe at RSGB Headquarters. Groups using a GX or similar prefix instead of a GB call are asked to contact HQ as well.

Three new Senior Instructors in the Novice licence training scheme have recently been appointed by the RSGB. They are . . .

in Avon - Steve Hartley, G0FUW;

in Buckinghamshire - Verdon Webley, G0RKV;

and in Oxfordshire - Brian Fisher, G0SAG.

Anyone requiring information about the Novice amateur radio licence should contact Lynnette Ranger at RSGB Headquarters in the first instance.

The Radio Society of Harrow is celebrating its Golden Anniversary this year. The society's committee is particularly keen to hear from old members, wherever they may now be, who may have pictures or documents relating to the history of the club, or who have reminiscences to contribute. Past, lapsed or potential members are also invited to join the society in a programme of amateur radio and social events throughout the year to celebrate the 50th anniversary. For further details of this year's activities, contact treasurer Chris Friel, G4AUF, whose address is correct in the RSGB Call Book.

RSGB Headquarters at Potters Bar will be open on Saturday, the 20th of January, between 10.00 am and 4.00 pm. The bookshop and GB3RS shack will be available to visitors, as will the National Amateur Radio Museum and Library. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Uniform and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

A major expedition is planned from Wake Island in mid-Pacific by 'The Dateline DX Association' from the 24th to the 31st of January. The operators are AL7EL, K4HQI, N6EK, W4PGX and WB2DND, and the callsign for the DXpedition has been announced as AL7EL/KH9. The group has promised to give European DXers plenty of opportunity to work them.

From the Bahamas, K2LE was planning activity as K2LE/C6A from Saturday the 13th of January for one week. Activity will be on all bands from 80 to 15 metres.

And from the Dominican Republic, DF5WA was planning to be active as DF5WA/HI8 from Tuesday the 16th of January until the 6th of February on CW, SSB and RTTY, all bands including 160 metres.

Next the Rally News:

We know of no rallies for today, but the Oldham Amateur Radio Club Mobile Rally will take place next Sunday, the 21st of January, at the Queen Elizabeth Hall, Civic Centre, West Street, in Oldham. The event features the usual traders and a bring and buy stall. Morse tests will also be available on demand. Doors open at 11.00 am, or 10.30 am for disabled visitors, and talk-in will be on 2 metres channel S22. For further details ring 0161 652 4164.

Now for the HF contest news:

The RSGB Affiliated Societies - AFS - Contest takes place on 80 metres CW today, the 14th of January, between 1400 and 1800 UTC. The SSB AFS contest will take place next Saturday, the 20th of January, between the same times. The rules were published in last September's RadCom.

On Tuesday the 16th of January the first session of the LF Cumulative CW Contest will take place in the 160 metre band. A 40 metre session takes place on Saturday the 20th, and an 80 metre session on Sunday the 21st of January. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the January RadCom.

Next some VHF contest news:

The RSGB 144MHz CW contest takes place today, Sunday the 14th, from 1000 to 1600 UTC. And the first of five sessions in the 70 MHz Cumulative Contest takes place next Sunday, the 21st of January. The rules for all these contests can be found in last September's RadCom.

And now the solar factual data:

The period from the 1st to the 7th of January saw solar activity at low levels and the geomagnetic field at quiet levels. Sunspot numbers increased from 25 on the 1st to peak at 69 on the 5th, but then declined to 45. The mean was 47. Sunspot region number 7938 emerged on the solar disc on the 3rd and grew rapidly over the following few days. On the 3rd it produced a C1/SF solar flare, lifting solar activity to low levels. On the following day the same region produced over 20 uncorrelated B-class flares. By the 7th, the region had shown some decay and the flare activity had also subsided. Solar flux levels increased from 75 units on the 1st, to 86 units by the 4th, but then declined slightly to 83 units by the 7th. The average was 81 units. Electron fluence remained at a moderate level, whilst X-Ray flux increased from A1.2 units on the 1st, to A7.1 units by the 6th. The figures for the 4th and the 5th are missing due to a computer problem at Boulder. The 90-day solar flux average on the 7th was 76 units, one unit up on last week.

Geomagnetic activity remained at low levels and averaged Ap 5 units. On the 1st and the 7th the Ap index was down to 3. Due to the Scottish Hogmanay no aa indices are available from the British Geological Survey in Edinburgh. To replace the aa indices this week we bring you the solar wind data. The period from the 25th to the 31st of December saw the solar wind velocities average 600 kilometres per second on the 25th, declining to 350 kilometres per second for the rest of the period. Particle density fluctuated between 5 and 10 particles per cubic centimetre, but increased to 20 on the 30th. The magnetic sector structure was mostly 'away' on the 25th and 'towards' on the 30th. Sector structure was not clearly discernible during the remaining days.

I'll repeat the figures: spots - 47, flux - 81, Ap index - 5, X-Ray flux - A3.0.

Now the inospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 29th of December to the 4th of January, remained fairly steady and averaged 6.4MHz. The darkness hour lows increased from 2MHz on the 31st, to 2.5MHz, with an average of 2.4MHz. The daytime highs took place between 1100 and 1400, with the darkness hour lows taking place between 1800 and 0600 hours.

I'll repeat the figures: highs - 6.4MHz, lows - 2.4MHz.

And lastly the solar forecast.

This week, with the quiet side of the sun expected to be looking our way, solar activity is expected to be at very low levels. The solar disc is expected to be spotless on some days, and the solar flux levels may be as low as the 70 mark. A slight increase could take place later in the week. Geomagnetic activity is expected to be very quiet, with levels down to Ap 5 units or below on some days. Activity could increase to 'unsettled' levels on Thursday or Friday. Ionospheric MUFs for the south during daylight hours are expected to be about 20MHz, and the darkness hour lows about 8MHz. For the north levels will be about 3MHz lower. There is a small chance of sporadic E openings, particularly on 28 and 50MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Uniform and G7 Victor Yankee series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

644. Electonic flash unit problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: archive@flash.ATC.Olivetti.Com
Message-ID: <4d3541$nej@olivea.ATC.Olivetti.Com>
Source record: 232360
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

I have an electronic flash unit purchased in 1970. After being unused for many years, I find that now it does not function correctly. The lamp is powered by 250 Vcc and the flash is triggered by a pulse. I have checked the capacitor, which is in good condition. Has the lamp failed through again?? Does anybody have the answer?

645. Re: Need QSL info: 3DA0NX

Newsgroup: rec.radio.amateur.misc

Hi Sandy...
Thanks for the info. I was the original poster. I thought it was legit
(at least, I really hoped it was). I couldn't find any QSL info on the
local packetcluster which uses the W6GO list, so I thought I'd try here.

TNX es 73,
Jim, K9JT

: steve KF2TI 200,000 countries and 5 galaxies confirmed

3DA0NX was a LEGIT operation .... Koji Tahara JM1CAX/ZS6CAX/YJ0NX, etc
was the op. He's living and working in South Africa .... should be okay
to QSL to him via JM1CAX (thru JARL buro) and/or thru ZS-buro. Someone
recently posted his address .... c/o Japanese Embassy in South Africa ...
but frankly, I wouldn't waste the time/expense.... if he's getting his
QSLs from the JARL buro ... they are sent to him EVERY MONTH.

Cheers
Sandy Wa6BXH/7J1ABV

651. Re: Vote here in Favor of Bill Cheek

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: Gerald Schmitt <kc5egg@eule.lanl.gov>
Message-ID: <4d38ns$4pn@newshost.lanl.gov>
Source record: 232367
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

I believe Charles Copeland did the first cross post to the non scanner radio groups. As I e-mailed to Mr Copeland this flame war is of little interest to the non-scanner crowd.

Bill Cheek you are doing yourself much more harm than good reputation wise by posting before regaining your temper. I have read your books and columns and in the past had some respect for you and your efforts. I too, have a temper, but your postings particularly with the challenges and foul language do little to shore up your public image. If the intent of your adversaries is to make you look bad you are helping them tenfold with your "defense". I know my respect for you has been diminished and I am sure the respect of others has also.

652. Ham Radio Saturn Car Computer Problems

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: Connie Haw <chaw@lib.occ.cccd.edu>
Message-ID: <4d3pnv$13k@tech.mm.occ.cccd.edu>
Source record: 232368

Does anyone have any experiences/expertise to offer regarding the installation of my ham radio in my new Saturn SL2. I have been told that it could interfere with the car's computer - even activate the airbags!

653. ATV Shuttle-Rebroadcast in Bay Area??

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: Ronald Ross <rossr@tcs.com>
Message-ID: <4d3cd8$6dm@tcsi.tcs.com>
Source record: 232369

Hi , I was wondering if any rebroacasts of Shuttle/Nasa Select TV
is exist in the Bay Area, and if so on what frequency??.
thanks Ronald Ross.

654. Re: Element spacing on a beam antenna?

>diameter might or would play a part in the part of the formula too, would I be
>correct?

Well, a yagi beam uses *1/2-wave* elements. If you try to use 1/4-wave
elements, you'll have to have a groundplane under the elements. That'll
make your driven element have a feed impedance close to 50 ohms so you
won't need an impedance transformer. Physically, 1/4-wave elements on
a groundplane can be a mess for a rotatable beam, however, and a traditional
yagi with 1/2-wave elements will be better.

You can use a wooden or pvc boom, or you can use a metal boom, but the
element lengths will have to be adjusted slightly to compensate for
the difference between a conductive boom and a nonconductive boom.
Element diameter has an effect too, but something like 1/8 inch diameter
rod or 1/4 inch tube will behave much as the formula for wire would
indicate. You'll have to cut and try to get everything tuned anyway
because the elements interact. A crude rule of thumb element to element
spacing would be 0.2-wave. Copper or aluminum make good elements. Brass
is fairly resistive to RF and wouldn't be a great choice, nor would
iron, but either could be used in a pinch.

Ideally, you'd use a yagi optimizer program to select element
lengths and spacing. That would reduce the amount of cut and try,
and would give you a known pattern. The ARRL Antenna Book (which
you should have anyway) now comes with a disk with a yagi optimizer
program. That would let you play with element lengths and spacing

before you start working with the hardware.

655. Vancouver "Ham" Jamming Police?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4d3jmb$6or@newsbf02.news.aol.com>
Source record: 232371

If they haven't caught anybody ("unlikely that he will be caught") then where do they get off saying it was a ham. I think that newspaper should be taken to task for spreading falsehoods, but if you did that, there would be no more "news" media.

Jim
KD1YV

Tim Smith (tsmith@ici.net) writes:

BC>>You say "ignore the bastards"? Right. Well, in the year I
ignored
BC>>Moss, he must have convinced TSMITH and Michael Alexander, to name
BC>>two. Oh, and lest we forget, there's Peter (PjB) Breath and a few
BC>>other squeaking wheels following in Moss's traditions. He must
have
BC>>convinced them, too. Yup, that's what "ignoring the bastards"
gets.

TS> I have no association with the above gentlemen. My observations
are independant.
TS> I see you've pissed off someone at Prentice...nice job..did you go
to school for that
TS> specialized form of marketing?

I am not in the newsgroup for marketing. Radio is my hobby, too.

If someone at Prentice Hall is pissed, so what? I have other friends
there, some well placed. <shrug>

If your observations are "independent", then why will you not confront
me with them in public in the offhand chance you failed to observe
very
clearly; i.e., you made a mistake?

You levied an accusation against me of profound magnitude. Why will
you not give me an opportunity to deal with it; to answer to it?
Obviously, your intentions are rather foul.

You're saying Hobby Radio and notably scanning would be better off
if you "killed me" or ran me off?

Bill

657. You Know You're a Ham When ...

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4d27jg$il1@steel.interlog.com>
Source record: 232373

With all the arguements and back-stabbing going on in this newsgroup
I thought I'd try to inject a little humour.

You know you're a ham when...

you find yourself mentally undressing your rig.

you'd rather turn on your rig instead of your wife.

your definition of high fashion is a baseball cap with your call letters
on it.

your shack actually begins to look like one.

at a party, after you've told a joke, you say "hi hi".

you're happy to be considered just another bean for the pot.

your idea of sightseeing is checking rooftops for antennas.

you check for your packet messages before you check your answering machine.

you think carrying an HT is more of a status symbol than a portable
cellular phone.

you have the need to explain to someone that being a ham is not the same
as being a CBer.

And remember, keep a joke in your heart and a hand in your pants and you'll
always have a smile on your face.

73 one and all.

Alan VE3XAG

658. Want mods for IC736, IC737(A) and IC738

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: Martin.Rask@mailbox.swipnet.se
Message-ID: <4d46g7$709@mn5.swip.net>
Source record: 232374

Hello and thanks for reading this !! :-) is there anyone outthere who
has any mods for anyone of these three radio's ?? could be anyting from
improving RX to how to get expande TX. I would really appriciate any mod
at all for these radio's (havent seen any at all passing arround) so is
there anyone who has a mod outthere please send it to me.
Best 73's De SM7VHS /Martin hope to hear you on the bands.

Well then perhaps you'd like to enlighten those of us that feel
its value as a test element has out lived its usefulness. Also
I don't hear much talk about scapping[sic] CW as a mode of
communications, just as a required test element to access
non-CW band segments.

It's also hard to see how no insult's[sic] were intended with
the subject line you gave your post. No insult intended.

73,

660. NNY Operating Event 1/13 to 1/14/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: rick WZ2t <70530.2732@CompuServe.COM>
Message-ID: <4d1o9b$3k5$1@mhadg.production.compuserve.com>
Source record: 232376

Hi Everybody,
The new ARRL section Northern New York will be holding an operating event this weekend, 1/13/96 to 1/14/96. The times are as follows 0000z 1/13 (7 pm EST Friday) to 2400z 1/14 (7 pm EST Sunday). Frequencies are 40 kHz up from the bottom of the General and Novice bands on 80, 40, 20 SSB & CW and 2m FM.
We will be giving out certificates to hams who work at least 5 different NNY hams or at least 5 different NNY counties. An endorsement will be given for working the Section Manager WB2BAU, George. He will be on 80, 40, 20 and 2m, 40kHz up from the bottom of the General band. Times are 40 till early afternoon, then 20 till it closes, then 2m, then 80.

Please send an SASE to WB2BAU for the certificates:
George WB2BAU
General Delivery
Norwood, NY 13668
Make sure you get the county of the NNY station you are working to help us to process the requests.
NNY includes the following counties: Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Jefferson, Lewis, Montgomery, Otsego, St. Lawerence, and Schoharie.
Any questions can be sent to me at richards@nylink.org. Please get to meet and greet us in NNY.

661. Re: US Hams want to operate in UK

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-11 00:00:00 UTC
From: Fergal Purcell <eusfpl>
Message-ID: <4d36ka$5pq@cnn.exu.ericsson.se>
Source record: 232377

(1) You'll have to get reciprocal licences. The ARRL should be able to get you the correct information for applying for the licences.

(2) The 2m band in the UK is 144-146 MHz.

(3) Most of the repeaters (if not all) are open. You'll need a 1750 kHz tone to open the tone burst repeaters. This can be done easily by a varied pitch whistle.

(4) I believe that the UK is been divided into areas with CTCSS. Repeaters will slowly move over to implementing CTCSS.

(5) Repeater frequencies are...

R0 145.600
R1 145.625
R2 145.650
R3 145.675
R4 145.700
R5 145.725
R6 145.750
R7 145.775

Input: - 600 kHz

Enjoy!

Fergal VE2IRL/N5

662. Re: Is Wayne Green losing it ?

The question, "Is Wayne Green Losing It" makes the presumption that Wayne Green once "had it". I do not suffer under that delusion.

The third time he stiffed me for an author's fee I got the idea that maybe Uncle Waynsie wasn't playing by the honorable rules that the rest of us seem to abide by.

'bye, Wayne, don't think it wasn't a pleasure, cause it wasn't. BTW, anybody noticed the horrendous job of proofreading they are doing these days? The new editor must be getting paid what he is worth.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 JANUARY AND FORECAST FOR 12 JANUARY - 14 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 10 Jan
Daily Proton Fluence >1 MeV: 6.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.2E+06 (normal)
X-ray background: A1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Jan 13 Jan 14 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Jan: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 10 Jan
Learmonth 7 2221 2232
Fredericksburg 3 3
Planetary 3 1

Observed Kp for 10 Jan: 1000 0011
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Jan 15 quiet to unsettled, with possible active periods.
13 Jan 10 quiet to unsettled
14 Jan 7 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

11 Jan Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Jan Normal Normal Fair
13 Jan Normal Normal Fair
14 Jan Normal Normal Normal
COMMENT: High latitudes may experience slight degradation on
12 January.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
11 Jan 3

Observed Australian Regional MUFs:
Townsville: near predicted monthly values during the local
day, 30% depressed local night.
Sydney: near predicted monthly values.
Hobart: near predicted monthly values.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 Jan 10 near predicted monthly values
13 Jan 10 near predicted monthly values
14 Jan 10 near predicted monthly values
COMMENT: A slight degradation in HF conditions may be experienced
for southern region Australia on 12 January.

I'm sorry, but I don't know. I have the same question for Kenwood
rig. The RS232 level adapter is $130. Anyone know of a less
expensive way to do this?

Any help much appreciated, 73 de Penn

I'm not a hardware engineer, so perhaps I'm talking through the back of my
head. But here are a few names I know:

Stanford Telecom (has a wide range of IC's for all kinds of digital
communications applications). Others (whom I know less of) include e.g.
Advanced Micro Devices, Analog Devices and PCSI,

Lars

At least two of the members in my ham club have had bad experience
with Austin Amateur Radio Supply. One walked in with money in hand,
ready to drop kilobucks on a new HF rig, and they wouldn't even take
it out of the box to show it to him before he bought it...a wasted trip
to Austin. This is sad and I hope they correct the situation. I know
that not all ham stores are like this... I visited an HRO store in
California and the sales people were pleasant, helpful and great to deal
with. (I have no connection with HRO, by the way.)

Another two cents..soon we'll have enough for coffee.

I think the group has had enough of your public ramblings. My opinion still stands along with the developing opinion that the only reason you are here is to market your organization, sell books and subscriptions to your newsletter and contribute very little otherwise. It's your right and if anyone is remotely interested and has alot of idle time can reload the old articles and follow the threads.

BC>>I am not in the newsgroup for marketing. Radio is my hobby, too.

TS> Hmmm...you're becoming really incoherent....earlier your life,
TS> livlihood and family were at stake. No marketing?

Lying like you do......puts a lot at stake. What if I researched
and contacted your employer with........fabrications and lies like
you basically did to me? Got nothing to do with marketing, Smith.
It's lying.....between the gap in your buckteeth.

TS> Ok...we'll ignore the commercial, tag line, brag page or whatever
TS> you call it then...

Signature line? Filled with different ways to communicate with me,
which....by the way, a lot of people want to do. There's no
advertising in it. It's a helluva lot better than much of what I
see out and around. You don't like it or something? Does it
bother you? If so, check Parnass' signature line. Now there's some
advertising for you. No? I don't mind, but apparently you do.

TS> Good...you'll probably need them when sales dip even further....

What sales? Are you trying to hurt my sales? Suit yourself, but
you don't stand a chance. My bulk business is sales of oversize
condom rubbers for the overendowed. You couldn't possibly influence
my control of that market on a dream and a prayer.

If you want to stop me from writing books on radio hacking, well,
have at that, too. I can't imagine why, though, unless you are
downright jealous or too impotent to accomplish anything for yourself.

TS>...sure is strange how BP posted a few "familiar" articles today...

I've never read them, but will download them now for posterity.
I see where they are product reviews. I am not interested in
Parnass' product reviews whatsoever. Never have been. He does
things the way he sees fit, which is fine for the neophyte....
but of no use to me. Parnass addresses a wholly different audience
than I do, and ne'er the twain meet. It's no big deal, but I am
not interested in plagiarizing anything he has ever written.

If......and I say *if* he was the original author of that R71A
tuning technique, it was a total, random accident that I wrote
about it in the Montoring Times article of January, 1992. A fellow
in Las Vegas sent me the write up and GAVE ME PERMISSION TO PRINT

it. For all I knew, he was the originator. He still could be for all I know. Maybe he told somebody about it who told somebody about it who told Parnass? Maybe he picked up Parnass' article off the Internet? Maybe someone else rewrote Parnass' article and changed the credits? There is NO TELLING about that sort of thing.....

Now, are you ready for a bombshell? The article I printed differs substantially from the one Parnass posted to the echo. The title is the same...the substance is the same.....but the articles ARE different. Furthermore.....and clapse a deathgrip on your peanuts before you lose them, but Parnass' header states the article was from the April 1985,issue of Monitoring Times. What I wrote was for the January 1992 issue. Now isn't THAT weird on a couple of counts?

1) It would or should be painfully obvious that I would not knowingly "steal" something from the same magazine !!!!!!!

2) And it is mighty strange that Monitoring Times let it pass !!!

If this is the basis on which you levy your charge that I ripped off Parnass' stuff, then bend over, fella. There's nothing of substance to your bullshit. It was a compound accident over which I had the least amount of control. I'm not sure HOW I could have prevented it.

If you claim anything in my three books is Parnass' work, then get off your lying butt and spit it out so I can check into it. Don't get

your hopes up though, dingleberry. Everything in my books has been checked and doublechecked to make sure of sourcing and other potential conflicts. Clean slate there, parasite.

Forget Parnass' articles on the 2004 and 2005 and any allusions to cellular originality. I got one of the first PRO-2004's into this country in September, 1986, and had the cellular diode snipped and out within days.

(I had diode-programmed my PRO-2002 for the military air bands AND cellular back in 1981....and found that even though 800 MHz appeared in the display, the top end remained at 520 MHz. Bottom line is that I was hacking scanners long before there was ANY public knowledge that it was possible. I never wrote about it because no one was overly interested in scanners at that time.)

The memory and speed diode mods on my PRO-2004 followed immediately thereafter in September 1986. I was aware of these "discoveries" happening more or less simultaneously around the country. Pure, raw, discoveries, mine included, are not copyrightable. Only the published

wording of such matters is possible to copyright. There is no possibility of conflict with the routine "clip-a-diode" and "add-a-diode" typesof matrix programming hacks.

Aside from this simple shit, there's no conflict about anything else I wrote. It's ALL original by yours truly, with credit rendered to even those who sent me IDEAS to probe and explore.......names of Lynn Burk, Mark Persson, Milan Chepko, Terry Vaura, David Jones ....and many more who contributed however slight, to the information in my books. The names are THERE, clingberry. All you have to do is READ them instead of concocting malicious lies based on your axe to grind and a gamble that I'd be afraid to deal with you in public.

Parnass' name is not there, one because I hadn't heard of him before about 1992 after my 2nd book, and two, because he didn't contribute to ANY of the information or to my research. Simple as that. If he had, his name would have been there. There are several names credited in my books who I have never communicated with in my Life, but who I knew had been involved in the research or discoveries BEFORE I came up on the information. Read the books, DingleFritz: the names are there.

BC> You're saying Hobby Radio and notably scanning would be better off
BC> if you "killed me" or ran me off?

TS> No but your rhetoric use of profanity gets tiring and lessens the
TS> impact of your dialogs...

Oh. Well, did it ever occur to you that if it weren't for the lying sonsofbitches in this world, I might not feel like being so profane?

TS> You have a definite writing style that is truly unique...

Your spelling and grammar on a par with maybe an 8th grader. And a not

very bright one, at that. I haven't made mention of that little deficiency of YOURS until you chucked the first stone. Do take note of that.

> if you're not beating the thesarus to death

I don't use a thesarus. Don't need one.

> you're swearing...really make you sound intelligent.

Oh. Ok. I can live with that. I have always called a spade a spade,

and a shithead a shithead, and a lying sonofabitch a lying sonofabitch.
Mincing words isn't among my skills. Is that your problem with me?
Amd, ummmm, is English your native language?

From: k6cblhater@aol.com
Message-ID: <4d4vrk$3da@newsbf02.news.aol.com>
Source record: 232248

Local police raided a ham who was reported by an unknown person (also a ham?) to be the guilty party. When the police found several scanners and a VHF transceiver "capable of doing the jamming" they arrested him, sans warrant and took him to jail. He is not the person who was doing the jamming, as his transceiver did not even operate in the police bands. But tell that to a judge!

>Karl Nielsen - KC7LVV

I went rim to rim a year and a half ago and had fairly good coverage
from the repeater Hopi Point on the South Rim (147.320+). It is
especially usable from the area around Phantom Ranch. I believe it is
where most of the park rangers communicate too also. Unfortunately,
if you are further north or south in the canyon, the repeater will
not be of much use to you and it is the only near there that I am
aware of. Hope this helps out and Happy Hiking!!!

The Topband reflector is:

topband@frontier.net

Administrative traffic (subscription, etc.) should go to:

topband-request@frontier.net

To subscribe send an e-mail message containing the single line "subscribe"
in the text to "topband-request@frontier.net." Further information is
available by sending an e-mail message containing the single line "info"
to the same address.

> Please reply to jmaca@phoenix.net

Done.

Well since you obviously knew you were writing an inflamatory post
it seems only fitting to follow up on it.

When are you going to acknowledge that you have *NO CLUE* as to
why people want to change the testing system? I hold and advanced
class license and could really care less whether they make it
necessary to sit on the sun to become an extra. I don't want or
need those puny allocations reserved for "a few good men". Yet
I believe the testing system should be changed. So explain how
wanting the system changed makes me "lazy"???? Face it, you
haven't the foggiest idea why someone wants something changed
unless they state their reasons. When you can read their minds,
then you can state why someone does something or feels some way.

You're as bad a Deignan and Biancomano. When some "group" doesn't
hold the same values or beliefs that you do, it's your duty to run
them down and label them as "lazy", "scumbag", or whatever.
Not only are they gross over generalizations that don't stand up
under scruntiny, they are only reinforced by your anecdotal evidence
as seen through rose colored glasses.

Carping in here about their perceived imperfections does absolutely
nothing to improve the situation. Hans hit it square on the head.
Go elmer some "lazy" individual and make a contribution instead
of a condemnation. They may not improve, but your condemnation will
certainly not make things any better. More likely than not it will
just make things worse as those you condemn are rarely going to want

to emulate your behavior. They'll probably just do the opposite.

73,
Todd
N9MWB

PS Please explain the (il)logic behind your claim that testing
indicates a "good positive attitude? What a laugh.

>and reproduced his own. He charges $1.00 for the form. 73...
>jimwills@ballistic.com

Or, if you don't want to line W5YI's pockets, you can send a SASE
to the ARRL and have 610V copies sent to you free. Or you can call
the FCC fax server and download your own. This scam sounds like the
one where W5YI offered to renew your license for you, for a fee,
when the FCC will do it for free.

AFAIK, the FCC forms are printed by the Government Printing Office.
If they use prison labor, I don't know about it, but I also don't
find it objectionable if true. We might as well get some benefit
from the $35,000 a year we pay to keep each of them locked up, and
they benefit too by learning a trade.

694. Help identify strange morse key?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-12 00:00:00 UTC
From: moritz@ipers1.e-technik.uni-stuttgart.de
Message-ID: <4d5b5o$2su0@info4.rus.uni-stuttgart.de>
Source record: 232260

Hello,

I have a strange morse key, of which I should like to know
the origin. It is a straight key.
The body forms a case, made of brouwn bakelite. The actual key is
mounted upside down on the lid inside the case. The bottom of the case is
basically a cover, with the shape of a bath tub (square with a hinge in
the back and rounded in the front with a clip for the lid).

The knob and two isolated contact screws protrude through the cover,
so it appears to be designed for operation under adverse conditions
and for keying high voltages. the individual components are marked with
reference numbers.

Thanks for any help,

73, Moritz DL5UH

How did you 'check the cap' ? Were you able to determine that it would
hold a charge, or did you just check that it wasn't shorted ?

The most likely failure is that the cap is indeed open and will not take
a charge. That's always been the problem in the 3 or 4 that I've had die
on me over the years.

It's not that I'm better than a lower class licensee it's just that I'm
sick of the whining that some no-coders issue forth with. If you're
happy with your license class and aren't whining for extra class
priveleges then I have no problem. But I made the effort and got
my extra class so why should anyone else be grandfathered in? Ask
KD1HZ about that.

A lot of us newer Hams have earned our Tickets from the no-code era.
Personally, I passed the 5WPM while waiting for my license and went on
to the Advanced "class"... which makes me no better then anyone who
hasn't. Many people don't have the time to do the preperation needed
for the higher class requirements because of family, jobs, etc.

I got my start in CB many years ago, moved into SWL and learned a lot
about propagation and such, then did the Ham thing. I understand that
in the more densly populated areas, 2M is becomming more "CB" like.
On the other hand, many areas of 80, 40 and 20 meters are the same way
because there are people who have been there for many years and
believe they own their particular slice of the frequency spectrum.
These may be the same people who complain about no coders.

I have talked to many people who state they are "...just a No-coder",
So What!, they earned it just as I earned my advanced. More power to
'em. If they want to advance and gain more privledges, they will! If
they don't, that's their choice in a free country.

There are Butt Heads on 2, 10, 11, 12, 15, 17, 20, 30, 40, 80, and
160 Meters... who cares, do what you want and don't bother your
"Brother" about his/her choices.

:
I wasn't going to get into this code debate, but Hans' said it so well that I feel the need to support him. Well said!

Let me also through out my $.02 for a possible new "test", based on this philosophy.... The idea came after reading an article in QST about how things are done in other countries - Spain to be exact. They apparenly have the usual tests, *and* you need to have completed some number of QSOs with some number of countries.

For us, how about "no code" privileges with limited HF access (perhaps a subset of the Tech+ privileges on 10m phone and 40m CW (yes, CW!)), and upgrade with testing *and* verified QSOs to gain access to more spectrum space.

The idea behind this is that it forces hams to be hams and interact with hams (hopefully good ones) to upgrade, and it also allows the ham community at large to police the upgrade process by not returning the needed QSL cards to anyone who doesn't deserve it.

ARLB002 Ham License Issuance Still Stalled

ZCZC AG81
QST de W1AW
ARRL Bulletin 2 ARLB002
From ARRL Headquarters
Newington CT January 12, 1996
To all radio amateurs

SB QST ARL ARLB002
ARLB002 Ham License Issuance Still Stalled

The budget impasse is over for now, but FCC issuance of new ham radio licenses remains stalled, this time by bad weather. The FCC reopened Thursday, January 11, but closed Friday, January 12, as more snow hit Washington, DC. Monday, January 15, is a Federal holiday, Martin Luther King Day.

While it was open January 11, the FCC accepted electronic amateur license application files for processing from VECs, including more than 1800 records from ARRL/VEC. The FCC will expedite the application backlog, but some temporary software adjustments were needed before licenses are granted. It could take several days after Monday s holiday for the FCC to get back up to speed.

The earliest word on call sign assignments and upgrades is not expected until Wednesday, January 17. ARRL suggests applicants wait until then to call ARRL at 860-594-0300, 8 AM to 5 PM EST.

The same information will be available on Internet sites, including the University of Arkansas, Little Rock, WEB site at http://www.ualr.edu/doc/hamualr/callsign.html.

To all radio amateurs

SB PROP ARL ARLP002
ARLP002 Propagation de KT7H

Solar activity was up a bit last week, while geomagnetic activity
was quite low. This is a nice combination for HF propagation,
giving us a little better conditions on higher frequencies while
absorption is lower.

Low activity is expected to continue, with a gradually declining
solar flux rising slightly again after January 22. A recurring
coronal hole is expected around January 20, but it should not cause
a great disturbance.

Sunspot Numbers for January 4 through 10 were 48, 69, 57, 45, 53,
27 and 13, with a mean of 44.6. 10.7 cm flux was 85.9, 84.9, 82.7,
82.5, 79.3, 75.9 and 73.8, with a mean of 80.7.

Gary, KE4ZV expressed the opinion that:

>I also think that use of 20 meter HF procedures on VHF+
>repeaters is rude, and a mark of ignorance on the
>part of the operator.

Gee Gary, would you settle for "is INAPPROPRIATE, and a
mark of INEXPERIENCE" instead of "rude" and "ignorance"?

A newcomer to VHF (either a new license, or coming from
a background on HF) is likely to do things which are not
strictly in tune with VHF+ procedural conventions, but
that hardly makes them "rude" or "ignorant" by my standards.
It identifies them as someone who might benefit from some
"Elmering" rather than "labeling".

Hopefully you don't think I'm rude for bringing this up.

From: nielsen@vnet.ibm.com
Message-ID: <4d4gbe$jjt@watnews2.watson.ibm.com>
Source record: 232272

I am getting ready for a hike in the Grand Canyon and I'm trying to decide if it is worth taking my 2M HT with me. Are there any repeaters that I can use while I am in the canyon? Is there likely to be anyone else listening? Somehow it seems unlikely to me that I will be the only ham who hikes the canyon.

Thanks!

Karl Nielsen - KC7LVV

>: >NOCODES are operating fully equipped HF stations on SSB and on every HF
>: >band. I'm told a loop hole in part 97 permits this.

> Whats the loop hole in part 97 your referring to?

There is no loop hole. At best there are those that stretch the
definition of "control operator". What he's referring to is the
ability to have a third party participate in amateur communications.
That's hardly a "loop hole". Where the stretching occurs is that
the definition of control operator doesn't specify how much in
control the control operator needs to be. Can the third party
operate the PTT switch? Probably. Can the third party select
the frequency? Probably. Does the control operator need to have
his/her hands on the rigs at all moments? Probably not. Can
the control operator be the control operator for more than
one station that is carrying third party traffic? Perhaps?
When in a different tent? Hmmmm While sleeping? Probably not.

A technician class licensee can "operate" on any and all bands
using any and all modes that the control operator is licensed
to use. If the technician class licensee is the control operator,
then they cannot utilize any HF bands. If an extra class operator
is on hand and is performing the function of the control operator,
then the technician class licensee can operate anywhere. But so
could John Q. Public for that matter. When another higher class
licensee is in control of the station, the lower class operator
or non-licensed operator both become a third party. Field Day
is an excellent place to let amateurs and the public have a
taste of what's available. As a result, this practice is usually
encouraged.

What is causing the problems is that some are construing the
control operator function as being done by simply having some
amateur of sufficient class license somewhere on the site.
I've even heard where some make the claim that since they're
using an extra class call, that even when that amateur has gone
home to bed, they can still operate with his/her privileges.
Clearly that is a violation of the FCC's intent for control

operator (which actually has little to do with the call sign
used by a field day station.) It's all the gray areas in between
that can cause ceaseless debates.

73,
Todd

>you as absurd? It should, and is as insulting as your statement.)

Oh, if we had just done this 25 years ago. Back then we had a tight
little operation on VHF FM with its own crisp procedures taken mostly
from public safety. But the HF, appliance-operating, code-sending,
ARRL-supporting scumbags: (a) decided that there was something to FM
after all and, (b) found they didn't have to be professional-level
land-mobile radio technicians to put something on the air (due to the
burgeoning importation of rice-burning radios from Yaecomwood). Since
these assholes had "real" licenses, they couldn't be taught a thing.
And their sheer numbers overwhelmed any attempt to limit their access
to the good systems and thereby maintain high standards. Now, we have
reaped the bitter fruit of the vulgarization of the mode - long-winded
transmissions that routinely timeout the machine, grossly inappropriate
and horribly ineffective operating procedures, total cluelessness
concerning system and unit technology ("SINAD???") and an overwhelming
arrogance toward long-time, highly competent system operators. The
situation is hopeless now. But, if we had just been diligent back then
and kept anyone with a loading coil on his car off of FM, we could
still be enjoying evenings monitoring the local repeater in peace and
quiet.

In article <4d4ff7$e8n@ccnet2.ccnet.com> mliston@ccnet.com (Mike Liston) writes:
>I am not a ham, but I have a good friend that is. He asked me if I could
>find out where the term HAM originated. He thought it might come from
>High Amplitude Modulation or maybe it is short for "hamateur". Could
>somebody help us out? Thanks.

This question seems to come up every few weeks, Mike. You'll hear the
tale of little amateur radio station HAM, the call sign supposedly
formed by the initials of 3 students at Harvard, who supposedly single
handedly saved amateur radio back in the teens. Unfortunately, there's
no proof whatsoever that these students ever existed, or that they
operated a station with the call sign HAM. They supposedly testified
before Congress, but a careful scrutiny of the Congressional Record
for the period has turned up exactly zero evidence to back this claim.

You'll also hear the story of Home Amateur Mechanic, a magazine published
in early radio days which featured plans for simple amateur radios, thus
one might say that he operated a HAM radio. Home Amateur Mechanic certainly
did exist, and it did publish radio plans, but there's no solid record that
this is the origin of the term. (Though I tend to lean toward this explanation
as the most plausible.)

And finally you'll hear the story of the use of the term "ham",
as in hamfisted, as a derogatory term for unprofessional wireline
telegraphers. The story goes that the term became associated with
amateur radio operators when commercial wireless telegraphy first
started. There's also no proof that this is true, though the term
"LID" certainly did originate from wireline operators. That stemmed
from the practice by poor operators of putting a tobacco can lid
on the sounder to make the code easier to copy. The term "fist"
also came from wireline slang.

The only real answer is that the origin of the term has been lost
in the mists of antiquity. Nobody really knows how the term ham
came to be, nor where it originated. You'd think this would be
simple, with QST dating back to before WWI, surely there would
be some mention there, but no, there isn't. QST was steadfastly
stuffy in the early days, and didn't use the term until *much*
later, after it had become well established in common usage.

The one thing we can say, however, is that the term is almost
certainly of American origin. That's because it was in wide
use here before the advent of regular international contacts.
Thus the Cockney "hamateur" origin is almost certainly wrong.
And we can also say it had nothing to do with voice modulation
since the term was in wide use back in the spark days before

voice transmissions were common.

Is it HAM (for Home Amateur Mechanic), or is it ham (as in
hamfisted)? No one knows. But typical practice today is to
not write it in all caps as an acronym, but rather to use
it as a simple noun. That's just modern usage, however, in
the Morse days, there was no case distinction, so HAM or ham,
they were the same over the air.

Here is a summary of news items covered on edition #146 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 19-Jan:
-
1. STS-72 Shuttle Launch Successful with Packet Experiment Aboard
2. MIR Ham-Cosmonauts Unpack More Amateur Radio Gear
3. Canadian Amateurs Take First Step Toward Self-regulation
4. Industry Canada Approves Special Amateur Prefixes
5. AMSAT Phase 3-D Team Looking for Specialized Construction Help
6. "Amateur Radio Newsline" - Edition #961 from Los Angeles
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. FCC Approves DBS Frequency Auction, Despite Federal Shutdown
9. OPDX Reports Delay on Mount Athos DXAC Vote, New DXAC Member
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. "The RAIN Dial-up" from Chicago
12. Upcoming Special Event Station
13. Update on "This Week's" Pending Move to Canadian Satellite
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters and on the local 145.33 repeater.
The "Tech Talk Network" awaits the signing of a contract with the
new satellite uplink carrier. "This Week in Amateur Radio" should
return to satellite air later this month. Details will be posted
as conditions warrant. All affiliates are requested to contact the
producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach

them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Agreed, but it does show that they had a good positive attitude at the
time they took the test, as opposed to those who excuse their own
laziness by continually complaining that the system is wrong (whether
it be the technical exam or the morse test).

>protocol. It doesn't make a whole lot of sense to have to use different
>terms whenever you change bands. Granted, calling CQ on a 2 meter
>repeater seems unnecessary, but it shouldn't be considered an egregious
>offense on the calling frequency.

I don't think anyone would claim otherwise. CQ is a signal that has traditionally been used to attract attention in simplex operation, whether that operation is HF or VHF, where long winded call ups are required because there's no assurance anyone is listening to the particular frequency, but rather may be tuning the band looking for random calls. I believe many people only object to its use on repeaters, where it is redundant. Simply keying up and speaking your call sign is sufficient to alert all others monitoring the repeater to your presence and your willingness to talk. Anything more is excess, unnecessary, and a mark of poor operating procedure on a limited resource.

>One purpose of the Amateur Service is to provide a pool of trained
>operators. Why not train them in proper HF phone protocol while they are
>still on the VHF frequencies? Most folks learn by listening. They do
>what they hear others doing. Each operator also seems to have a little of
>his own personal style. This is a good thing I think.

I find this somewhat insulting, IE that you are saying that HF procedure is somehow "grownup" while VHF+ procedure is not. Many amateurs find VHF+ a perfectly satisfactory permanent home, and some have even migrated *from* HF to VHF+ since it better suits what they consider to be good operating fun and good operating practice. Perhaps we should teach good repeater etiquette to HF operators, so that when they finally graduate from frequencies near DC they'll know how to behave. (Does that strike you as absurd? It should, and is as insulting as your statement.)

>What's appropriate on 20 meter USB should not be considered inappropriate
>on VHF. A little greater tolerance by some would also be nice. Probably
>the most inappropriate kind of protocol is to key up a say something like
>"we don't say 'over' on this here repeater". People will learn by
>example, and rudeness is not a particularly desirable quality to teach
>to new amateur operators.

I agree that rudeness is never desirable, however, I also think that
use of 20 meter HF procedures on VHF+ repeaters is rude, and a mark
of ignorance on the part of the operator. The characteristics of HF
and VHF+ repeater operating *are* different, and different procedures
should be used. The techniques of the DX pileup or roundtable are not
the proper ones for VHF+ repeater operation. It's a different kind of
communications channel, and requires different procedures for optimum
utilization.

Does anyone out there know of any mods for the TS50?
I recently acquired one (after selling off my other radios)
and was wondering if there are any ways to improve or modify this
fantastic rig.
I heard of some sort of a keyboard that allows direct entry of
frequencies. Does anyone know that one? or possibly a source of info?
Thanks in advance for any help that you may provide.
73 to everyone, Bill Chapman VE3RWC.

>Does anyone have any experiences/expertise to offer regarding the
>installation of my ham radio in my new Saturn SL2. I have been told
>that it could interfere with the car's computer - even activate the
>airbags!
>
>
I'm using a Kenwood tm641 in a '92 Saturn on 6,2, and 220. I installed the radio in the trunk, with the remote mounted just below the glovebox. Wiring for power is direct to the battery, running (no less) down the passenger side, where a computer is located (behind the passenger kick panel). I have had no side effects running 50 watts on 6 meters, nor with full power on 2 and 220. The major trick is to ensure a quality installation, checking coaxial connections, and power cable wiring. For an in-cab radio, mounting perhaps on a floor pedestal or on the console might work ok (haven't tried it). As for interference with the airbag systems, again, a quality installation is mandatory. Make sure your antenna system is top drawer, high-quality with little or no SWR problems.

Your mileage may vary with this - mine works fine, but I did spend a bit of time with it. Highest quality is needed to avoid conflict with the rest of the car. Hope this helps.

737. How to reset AOR AR1500 Scanner

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-12 00:00:00 UTC
From: William Ward <wward2@gtwy.ford.com>
Message-ID: <4d6jo0$caj@eccdb1.pms.ford.com>
Source record: 232303

The AOR AR1500 has a reset switch located in the battery compartment. DO NOT TOUCH IT! If you do (like I did) you will find out that the unit is inoperable. My first instinct was to call ACE ELECTRONICS to find out what needed to be done to reactivate the unit. I was told by the technical "support" person that I would have to send the unit back to them for reprogramming and it would cost $45. After some calling around the nice people at EDCO faxed me the programming information (for free!). Thank you EDCO!

Here goes.

1. Reset switch ON
2. Turn power switch ON
3. Reset switch OFF

Note: at this point the display should be blank.

Punch in this sequence: (note "-" means PRESS/PUSH i.e. PRESS 1 PRESS PROG .....)

- 1 - PROG - 0.5 - LIMIT - 95.995 - SEARCH - 556.325 - ENTER
- 2 - PROG - 96. - LIMIT - 299.995 - SEARCH - 556.325 - ENTER
- 3 - PROG - 300. - LIMIT - 512.995 - SEARCH - 249.125 - ENTER
- 4 - PROG - 513. - LIMIT - 797.995 - SEARCH - 58.075 - ENTER
- 5 - PROG - 798. - LIMIT - 1105.995 - DOWN - 249.125 - ENTER
- 6 - PROG - 1106. LIMIT - 1300. - DOWN - 556.325 - ENTER

Turn power OFF then ON push MANUAL.

Your Done! (Don't play with the switch again...I wont!)

Ed N8SCG.

Subject: Commercial Radio Exams * 13 January * 10 AM * Cambridge MA

Summary: MROP GROL GMDSS Radar + Radio Telegraph Operator exams

** FCC Regulatory fee eliminated **
** New Question pools for MROP, GROL and GMDSS **
** In the Event of Significant Additional Snow call
617 253 3776 to confirm the exam is still on **

Keywords: Radio Exams Commercial GROL GMDSS MROP T2 Radar

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 77 Mass Ave, Cambridge MA in
MIT's room 1-150 at 10 AM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

At least for the moment the FCC has eliminated the $35 regulatory
fee charged when applying for for 5 year licenses. A similar fee
may be imposed in the future. This does not change the $35
examination fee we charge to give the exam.

The question pools for the GMDSS exams (el 7 and 9) and the MROP
GROL and Radar exams(el 1,3 and 5) have been updated. The changes
have been relatively minor however you should be studying from the
new question pools. The Radiotelegraph exam will be updated
effective 1 February. Copies of the new question pools should
be available now from National Radio Examiners. A comprehensive
study guide to the new GROL questions is not expected to be
published for a couple months.

Our next Cambridge commercial exam session will be held at 10 AM on
Saturday March 9th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For the Telegraph exams bring 2

passport style photos in an envelope to attach to your
application.

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
At this time this is probably the best study guide available
for all of the exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack. While this is still an excellent guide to the basic
material covered in the MROP and GROL, the current version is
based on the old question pool and should not be relied on to
have all the new questions.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard ships carrying passengers
for hire and certain aviation and coast stations. Large ocean
going ships will be required to carry two Global Maritime Distress
and Safety Systems - operator licenses. A GMDSS Maintainer License
is required to service GMDSS equipment. A Radiotelegraph
Operators Certificate is required to be a radio officer aboard
certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in
obtaining a commercial telegraph license as they will receive
credit for the 2nd class code exam. Bring your original amateur
license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the
National Radio Examiners COLEM, part of the W5YI group.

In article <4csf3v$bgo@news.mcn.net>, vfiscus@mcn.net says...
>
>
>
> 10-4 ??

Yet ANOTHER "extra" class (and when I say class, I sure don't mean
that the idiot HAS any) with a freekin' ATTITUDE. The attitude that
because he has obtained his lofty licence (OH! Haaaaaail to the Mighty
Amatuer GOD!!) that he is somehow better than those of a "lesser"
licence.
Jeeeeezzz.... how many times have I seen that?? Enough to completly
spoil my desire to participate in Ham Radio (like I used to) and not
want to have anything to do with it.
Ya know... before I got my ticket, I was under the "delusion" that
Amatuer Radio operators were like a big "brotherhood". Yeah right....
It wasn't long after I got my licence that I realized what a HUGE "class
distintion" there is!! Blacks think they've been discriminated against by
whites?? They don't even KNOW what discrimination is! Let them try being
a "technician" class for awhile! I'll tell ya.... When you are "only" a
technician class.... to most advanced and extra class operators, you are
LESS that a smelly pile of dog-shit. You are scum,and that not only are you
just not ignored, but sought out for ridicule, and told that you don't really
even deserve to be on the radio!
And WHY do they think they're better?? Because they know some more radio
theroy, and can pound brass quicker than someone else. Well... big fucking
deal. If that is how someone mesures they're "worth" as a person, then as far
as I'm concerned they're pretty fucking worthless.
So all you Extras (and to a certian extent Advanced) class operators out
there... go ahead and post your stupid little posts...and complain, whine,
and bitch on 20 and 40 meters.... and sit on your big soft fat asses, and
bask in the "glory" of how much BETTER you are than the rest...
just think about all the others YOU have driven away with your ATTITUDES,
and wonder where all the hams have gone when the FCC is selling off your
precious frequencies!

Hello Gang,

I've got some telegraph key restorations going and need a few parts to
finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. McElroy A-400 bug -- need thumbpiece and weights. A-400 or P-500 parts OK
3. Signal Electric Semantic -- need the pendulum stop post.
4. Electro Bug -- need weights. need one thumbscrew and jam nut.
5. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
6. Logan SPEED-X reverse frame -- need finger pieces
7. Clapp-Eastham -- need binding posts
8. Independent Wireless -- need binding posts

Would buy parts off your junkers or buy your junkers for the parts.

>Bill Cheek you are doing yourself much more harm than good
>reputation wise by posting before regaining your temper.

Hmmm,
Perhaps in your own eyes or your opinion, but I am not so sure.
When the slandered bite back on the newsgroups it is news indeed. Bill's responses have had some shock value. On the other hand it may be the correct way to rid the newsgroups of slanderers in the most efficient manner. Unfortunately most slanderers pick on victims who do not have a voice on the internet. In this case these clowns were so dumb as to pick on Bill, who not only has a voice but can put some fire behind it. I think Bill looks good as he seems to be demonstrating a refreshing and effective way to deal with the spineless slime. What is wrong with some demonstrative indignation? If it is upsetting to these dweebs, well "... heat....kitchen". ;-) Right on Bill!

This makes one wonder if the current Wayne Green thread would be progressing if W2NSD signed on and gave the geeks a rebuttal followed by a mild cussing.

Best regards,
wynnt

Karl, that's a good question. I would assume that simplex is used
quite extensively in the Grand Canyon due to line of site restrictions.
Good luck.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 JANUARY AND FORECAST FOR 14 JANUARY - 16 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 12 Jan
Daily Proton Fluence >1 MeV: 5.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.7E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Jan 15 Jan 16 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Jan: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to minor storm

Estimated Indices : A K Observed A Index 12 Jan
Learmonth 20 3345 3422
Fredericksburg 21 10
Planetary 25 4

Observed Kp for 12 Jan: 1002 1113
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Jan 8 quiet to unsettled
15 Jan 8 quiet to unsettled
16 Jan 8 quiet to unsettled
COMMENT: Geomagnetic activity is thought to be recurrent and
was originally expected for the 12 January. Active conditions
are possible on 18 January.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Jan Normal Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Jan Normal Fair Fair-poor
15 Jan Normal Normal Normal
16 Jan Normal Normal Normal
COMMENT: High latitudes may have experienced some degradation
overnight.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
13 Jan 53

Observed Australian Regional MUFs:
Townsville and Sydney: enhanced by up to 50% at times
Hobart: enhanced by up to 30% at times.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Jan -15 about 15% below predicted monthly values
15 Jan 10 near predicted monthly values
16 Jan 10 near predicted monthly values
COMMENT: IPS HF Communications Warning 1 was issued on 13 January
and is current for interval 14 January only. Enhancements are
thought to be in association with geomagnetic activity.

>up to 80 db dynamics, rapid online

Greetings Robert:

Thank you for the above posting!

I do not know what a Pro Audio Spectrum 16 sound card is. Could
I expect similar results with a Creative Labs 16 card?

759. Problem with Alternator whine

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-13 00:00:00 UTC
From: Frederick Ruecker <faruec@earthlink.net>
Message-ID: <4d90ea$fur@bolivia.it.earthlink.net>
Source record: 232156

I am experiencing a problem with alternator whine on the outgoing signal of a Kenwood 2m rig installed in a 1985 Ford Taurus with a direct power connection to the battery. I have tried a Radio Shack noise filter installed in the power lines to the rig but the problem was not corrected. The alternator has been checked out and all the diodes, etc. are OK. Anyone have any suggestions on what I could try next to clean up the signal?

I have for sale a Sinclair 4 cavity high power VHF duplexer Model# Q-202GC. To my knowledge it's never been used. The cavities are inclosed in a steel cabnet with (3) three conectors on the side. The frequency tuning range is from 132 to 174 Mhz and I have the complete tuning manual.

The Electrical Specifications are as follows:

INSERTION LOSS= Tx 1.5 db
Rx 1.5 db
ISOLATION, Tx Noise at Rx frequency = 80 db
Tx Frequency at Rx Terminal = 80db

MINIMUM ISOLATION Between Tx and Rx Frequencies = 50db

MINIMUM SEPARATION = 500Khz

This is a top of the line duplexer and lists from Sinclair for $1730.... I will take $850 or best offer. This is for local pickup or I can deliver within a 100 mile radius of Chicago Il.

You can "E" mail me at turtle@wwa.com

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

Setup Information for Participating Amateur Radio (HAM) Ground Stations

By: Ken McCaughey (N3FZX)
File: ham01.txt
Date: 20-DEC-95

1.0 INTRODUCTION

The Spartan Packet Radio Experiment (SPRE) is open to amateur radio operators and schools who want to participate. This document will guide you in your preparations for the SPRE mission. Included are some guidelines that will help you to determine if you can hear SPRE and what level of equipment you will need. Please read this document thoroughly. If you have any additional questions please contact the SPRE Project (see Section 10.0).

2.0 MISSION PROFILE

SPRE is one of four experiments on-board NASA Goddard's Spartan OAST-Flyer spacecraft, also known as SP-206. The Spartan spacecraft is one of the primary payloads on the STS-72 shuttle mission slated to launch January 11, 1996.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment and sent to SPRE via a serial connection. Special software called APRtrak (tm) will be used at SPRE ground stations to provide a mechanism to plot the positions of stations and objects world-wide using SPRE transmissions. Ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed station locations plotted on a map. APRtrak system can plot and track both fixed and mobile ground stations. The APRtrak software will decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status, along with the geographical positions.

SPRE can be used as an educational tool in many classes including math, science, and geography. The APRtrak software with its colorful graphics

and maps is available on Internet for installation on IBM compatible computers. Even if a school is not in session during a fly-over, a simple packet radio station can be set up to listen to the SPRE telemetry and record the data for later use.

The spacecraft will be deployed by the robot arm 3 days and 2 hours (3/02:00:00) Mission Elapsed Time (MET). After deployment the shuttle will distance itself away from Spartan (up to 100 miles). The battery powered spacecraft will perform its mission following a preprogrammed routine.

SPRE operations will start 2 hours and 41 minutes after the deployment and continue for approximately 46 hours. During the mission the attitude of the spacecraft will be changing. The spacecraft will make about 33 orbits before retrieval.

Near the End-of-Mission (EOM) the shuttle will approach the spacecraft for pickup. At approximately 5/00:30:00 MET the spacecraft will be grappled by the robot arm and returned to its berth in the cargo bay, thus ending the Spartan 206 mission.

Mission Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)
Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees Inclination
Landing: January 20, 1996 at 04:54 UTC at KSC

Spartan Deploy: ~3/02:23:00 MET
SPRE mission: Starting 2 hours 40 minutes after Spartan deployment operational for approximately 46 hours
Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex
Callsign: W3EAX, unproto mode only, do not connect!
Retrieval: ~5/00:30:00 MET

3.0 BASIC SATELLITE COMMUNICATIONS TUTORIAL

This short tutorial is written with SPRE communications in mind. It does include some specific information regarding the Spartan orbit.

In order to communicate with a satellite, its antennas need to be within line of sight of the ground station antennas. When a satellite is in "line-of-sight", you can not necessarily see it. It only means there is an unobstructed path between the two points. Satellites can only be seen visually if they are passing over your location around dusk or dawn.

At an altitude of 165 miles, the Spartan spacecraft has a circular "foot print" that is approximately 1000 miles in radius with the spacecraft at the center. The foot print is the area of the Earth that is in line-of-sight of the spacecraft. This circular foot print moves with the

spacecraft. A ground station that is within the foot print is within line-of-sight of the spacecraft. Where you are within the foot print will determine the angle, or elevation, of the spacecraft above the horizon. During a pass, the spacecraft will rise and set like the Sun and Moon, only much faster.

The quality of a pass is determined by the maximum elevation during a pass. The higher the elevation, the better and longer the pass. The general rule of thumb is that a satellite needs to be at least 5 degrees above the horizon to be heard. However, this will vary depending on the station setup and local topography. A good pass will have an elevation greater than 20 degrees. Passes can last from as little as 10 seconds to as long as 10 minutes. Most satellite tracking software packages can predict passes accurately to within seconds if the orbital elements are up-to-date.

The Spartan spacecraft will be in a 28 degree inclination orbit. This means the orbit is tilted by 28 degrees with respect to the Earth's equator. Therefore the spacecraft will only be directly over head as far North or South as 28 degrees. However, since the spacecraft is 165 miles high and because of the size of the foot print, it is within radio range of stations much farther North or South .

As mentioned in the beginning of this section, the antennas of both the spacecraft and the ground station need to be in line-of-sight. This is not always the case during a satellite pass. This is because the antennas on most satellites have a degree of directionality to them. During a pass the antennas might not be pointing at the ground station antennas, or even the Earth. The orientation of a spacecraft is referred to as the attitude. In the case of SPRE, the antenna system was designed to be as independent of the spacecraft attitude as possible. However, there are some spacecraft attitudes that will result in a degraded signal. During the Spartan mission the attitude will be changing due to the other experiments.

4.0 CAN I DO THIS AT MY LOCATION???

The following are some things to consider if you want to participate with SPRE. There are different levels of participation to be considered as well.

4.1 SPRE Passes

Before setting up any equipment it is important to determine if SPRE will fly within range of your location. If it does, the quality of the passes needs to be considered. To make this assessment, first look at a map and determine the latitude (degrees North or South of the equator) in which your station is located.

If your latitude is greater than 43 degrees, your chances are hearing or relaying through SPRE are zero.

If your latitude is between 40 and 43 40 degrees, your chances are hearing SPRE are very poor. Your chances of relaying a signal through SPRE are about zero.

If your latitude is between 35 and 40 degrees, your chances are hearing SPRE are very good. Your chances of relaying a signal through SPRE are poor without a well equipped HAM radio satellite station.

If your latitude is less than 35 degrees your chances of hearing SPRE are excellent. Your chances of relaying a signal through SPRE are good with modest equipment if there is not much competition on the uplink.

Latitude Hearing SPRE Relaying Through SPRE

> 43 No Chance! No Chance!
40 - 43 Poor Very Poor
35 - 40 Very Good Poor
< 35 Excellent Good

4.2 Levels of Participation

There are two levels of SPRE participation. These levels have varying complexity, interaction, and equipment requirements.

Full participation would include a setup with APRtrak and an amateur radio station capable of transmitting through SPRE. This implies that the station is at a favorable Latitude (see above). A sophisticated station with big antennas and a high powered amplifier are not necessarily required for full participation.

The next level of participation centers around receiving data instead of the ability to transmit to SPRE. This mode of operation requires the least complex equipment and less effort. This may be the mode of choice for stations located in unfavorable latitudes. APRtrak along with a TNC and almost any VHF (2 meter band) radio will work, even a hand-held radio. The antenna can be as simple quarter wave vertical. The more favorable the Latitude the simpler the equipment to receive data. The station can be operated during a pass or APRtrak can be setup to just listen and collect data. All data can be saved to the computer hard disk. All data saved to disk can be replayed on the screen!

5.0 GROUND STATION SETUP

This section covers the equipment needed to participate with SPRE. It has been the goal of the SPRE Project to make it as accessible as possible to the amateur radio and educational community. We have tried to make the ground station requirements as simple as possible. In general it does not take much power to communicate with SPRE. Since the SPRE foot print is so large, it is potentially within range of dozens or even hundreds of ground stations. All these signals will be competing with each other at the SPRE receiver. If there are a lot of stations transmitting at the same time, then usually the biggest signal wins. However, if a low power transmitter

is sending at the right time it can get through just as easily. Always used the least amount of power needed to communicate with SPRE.

5.1 Hardware

IBM compatible PC:

Recommended configuration	Minimum Configuration
386, 486, or Pentium processor	XT
VGA color monitor	CGA monochrome monitor
640KB RAM	640KB RAM
4MB free hard disk space	3MB free hard disk space
3.5" floppy disk drive	3.5" floppy disk drive
RS-232 Serial Port	RS-232 Serial Port

Simple packet radio station setup:

- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
~ TAPR-2 compatible
~ 1200 BAUD AFSK
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)

Note: If you have an amplifier and a beam antenna, it is more likely that you will be successful in communicating with SPRE. It is NOT, however, recommended that you purchase this equipment to attempt communications. The length and scope of the SPRE experiment is too narrow to justify a major expenditure.

5.2 Software

APRtrak:

APRtrak Version 0.5 is the program that is required to work with SPRE. APRtrak is similar to another program called APRS. However, APRtrak contains SPRE specific implementations for decoding the spacecraft position and telemetry. It is important to get familiar with APRtrak before the SPRE mission starts. This will increase for success rate. APRtrak includes documentation on how to make local maps, how to run simulations, and general information on GPS tracking.

APRtrak is available on the Internet. Below are just two of the many places on the net where APRtrak can be found:

W3EAX, University of Maryland Amateur Radio Association:
URL ftp://w3eax.umd.edu/pub/spre/aprtrak/aprtrak.zip

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/aprtrak.zip

Unfortunately, APRtrak for Apple and Macintosh computers are NOT supported.

Satellite Tracking:

APRtrak has the ability to track up to ten satellites. The orbital elements for SPRE and the shuttle may be loaded into the system. There are many satellite tracking programs available on the Internet. The AMSAT FTP sight has several program available. In addition, orbital elements for satellites are available on the AMSAT site.

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/

6.0 PRE-FLIGHT ACTIVITIES

The following are some suggested activities to work on before the launch.

- Play around with APRtrak and replay the simulations. It is important to get familiar with APRtrak before the launch.

- Identify the latitude and longitude location of your station on the APRtrak maps.

- Simulate the SPRE mission using satellite tracking software and the pre-launch orbital elements.

6.1 PRE-LAUNCH ORBITAL ELEMENTS

The preliminary orbital elements below may be used to simulate or predict when SPRE will pass over your location. It can be loaded into most any satellite tracking program. For best results, be sure your simulations use the dates and time listed in the Mission Summary above.

Note: These preliminary elements are for Spartan Spacecraft only, not the shuttle. They are subject to change.

Satellite Name: SPRE-00
Satellite NORAD Number: #40000 <--(DUMMY VALUE)
Element Set Number: 1
Elements Epoch: 96014.48984950
14 JAN 1996 @ 11:45:22.997 UTC
Orbit # at Epoch: 1
Inclination: 28.4779
RA of Ascend Node: 71.7928
Eccentricity: .001131
Arg of Perigee: 189.8166
Mean Anomaly: 358.1771
Mean Motion: 15.85695266
Acceleration/Drag: .0000177
BSTAR Drag: 0

Two Line Element (TLE) Format:

SPRE-00
1 40000U SPRE-00 96014.48984950 .00001770 00000-0 00000-0 0 11
2 40000 28.4779 71.7928 0011310 189.8166 358.1771 15.85695266 18

7.0 SPRE FLIGHT OPERATIONS

During the SPRE mission ground stations will need to have APRtrak up and running and setup for SPRE at least 15 minutes before a predicted pass. When the spacecraft initially rises above the horizon the signal will sound rather scratchy. The higher above the horizon it gets the more clear the signal will become.

Only attempt to transmit after successfully receiving some SPRE packets. Received packets are displayed at the bottom of the screen on APRtrak. If you can't hear SPRE, SPRE will most likely not hear you.

Watch the map to see other stations and the spacecraft. Do not zoom in to close or you may not see other stations. Set the zoom so that you are centered on your state and can also see at least one whole state on all sides.

7.1 OPERATING INSTRUCTIONS

DO's:

- Use APRtrak Version 0.5 to listen and/or communicate with SPRE.

- Use satellite tracking software to predict when SPRE will pass over.

- Set the comment field in APRtrak to the name of your school.

- Make sure your are recording all received data to the hard disk.

- Wait until you receive SPRE transmissions before attempting to transmit.

- Watch for other schools.

DON'Ts:

- Don't zoom in too close on the map.

- Don't attempt to connect using a conventional packet terminal program. It will not allow connects and you will be clogging the frequency with wasted transmissions.

- Don't transmit until you receive SPRE transmissions.

- If your locations has been successfully relayed by SPRE, please do not continue to transmit. Give other stations a chance to get through.

8.0 POST SPRE MISSION ACTIVITIES

The following are someone suggested activities to do shortly after the SPRE mission.

- Replay collected SPRE data using APRtrak.

- Send copies of your *.HST and *.LOG data files to the SPRE Project. We will take all the data files we receive and generate a composite file. This overview of the mission will then be made available to all schools and amateur radio operators.

9.0 QUESTIONS AND ANSWERS

Hopefully this will answer the most common questions. If not, send electronic mail to the SPRE Project (see Section 11.0 below).

Q: Do I need a GPS receiver.
A: No, APRtrack is used to setup your location parameters which are transmitted to SPRE.

Q: What is the difference between SPRE and SAREX?
A: SPRE will use packet radio in the un-connected or unproto mode. This means that stations can not connect to SPRE. This should ultimately provide more throughput. This experiment involves identifying the location of the spacecraft as well as ground stations. SPRE utilizes APRtrak with a graphical interface making it more interactive and interesting. Also SPRE is an automated system and not controlled by the astronauts.

Q: How can I find out when SPRE is passing over my location?
A: By using satellite tracking software and up-to-date orbital elements. Tracking software and is available in the Internet. Orbital elements are also available on the Internet including the SPRE WWW home page.

Q: Can the SPRE Project tell me when the spacecraft will be passing over my location?
A: No.

Q: Where can I get updated orbital elements?
A: They are available at the AMSAT FTP site and home page. During the mission they will be available on the SPRE home page (URL http://w3eax.umd.edu).

Q: Can the SPRE Project tell me what kind of antenna or radio to use?
A: No.

10.0 SPRE PROJECT

Participating stations should contact the SPRE Project so that we can try to keep you updated on any changes. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu.

SPRE Home Page: URL http://w3eax.umd.edu
Anon. FTP site: URL ftp://w3eax.umd.edu/pub/spre

The End...

Hmmm,
Perhaps in your own eyes or your own opinion, but not mine.
I think Bill has demonstrated an effective and efficient way to
deal with slander on the internet. If Bill's response has some
shock value well "...heat...kitchen..." get it .;-). What is
wrong with some demonstrative indignation? Most internet slanderers
pick on victims who have no voice for defense on the net. These
goof balls pick on Bill who not only has a voice but can put some
fire behind it. Seeing the reaction of the slanderers to Bill's
rebuttals has been amusing.

Best regards,
wynnt

I don't have a temper in virtuality. I just don't play silly games and mince words. Neither do I share the idiotic opinion that it's "ok to be the aggressor, and wrong to defend...." This is how you and some others come off. I don't share your views.....

> I have read your books and columns and in the past had some
>respect for you and your efforts.

Oh gawd, here comes another threat now....

>your postings particularly with the challenges and foul language
>do little to shore up your public image.

I don't care about "image", liver-lips. Geez! What are you doing for YOUR image right now? When I saw your name in the message queue, you were a total neutral-to-positive in my mind. As I read down your needless and senseless post, the image I had of you shot like a rocket down to cesspool level. Two way street, man.

>. I know my respect for you has been diminished
>and I am sure the respect of others has also.

Age old syndrome....speaking for others so you can feel justified in taking a spit at me. Geezus, that's what makes you and me so different. You NEED the approval and "permission" of others. Leave 'em out of it. I can't talk to THEM and YOU, too. You are not empowered to speak for anyone. Marginally for yourself.

Oh......my respect for you has diminished as well. Here, write this down....or MARK-COPY-PASTE it to a file: I have no concern for people who play one-way streets. Your respect for me has no more significance than mine for you. If you are so fickle as to throw that leverage on me out here in a public forum, then you are among those elite few who have a standing invitation to eat my shorts.

It is a very simple and equitable deal, actually. No problem.

Now then, here is the crux of it all. Drop into the Lotus position and meditate upon the gunk in your navel and consider HOW you really don't care what I think of you.....and then place an EQUALS (=) sign next to that and ponder how I really don't care what you think of me. Here....if you are into math, this is what it looks like:

1 = 1

See?

Equality. That's the way it is supposed to be, right? But that's not how you stupidly come off......trying to leverage your respect for me into some sort of a power play in a totally unrelated business matter.

Geez, dude, I write books and do a few other things related to radio to help earn a living. You come off as me being inferior because of that. So what if I stop writing books and developing technical projects for people who can't do it themselves. Would that make me rise to your "do nothing" level?

So you want to cut off your nose to spite your face? Ok. I really can stop writing, if need be. But tell me......WHO will take my place? Would you get Andy Moss to write the next book for you? How about ol' Peter (PjB) Breath? Or that lying, conivving TSMITH?

Or how about YOU? Maybe you'd like to step in my place?

Look dude....come one....come all! Leave my books and my living OUT of this forum unless you need technical support. You are NOT going to leverage your brand of sorry, low-life thinking on me. This is not a Radio Shack store where I have to kiss your ass; wipe your snotty nose; and take your verbal abuse.....all for what, a sale? Aw, fer chrissakes, man......play like a cow turd and hit the trail, will ya?

I am not here for your stupid games. I am not here to sell anything to you. If you think I don't know what I am talking about, then ignore me and don't read or apply the information in my books.

If you would like to compete with me....then do that. I will HELP you! I love competition! I will help you find a publisher or an outlet for your goods. The more, the merrier!

But don't shake a stick at me. Don't threaten me. Don't leverage me. I will NOT deal with a soul on this planet but what it's a straight up, large-print kind of a deal, period. You want something in addition to the deal, then you spell it out in advance in the large print so I can see if I have it or not. And I damn well might not have it. I don't have something for everyone and don't pretend to; not like Radio Shack and other businesses to which you have become accustomed, who will do ANYTHING to dip a hand into your wallet.

From me.....all you get is a square deal and then ONLY if I get one. If that ain't good enough, then eat my shorts or go lay an egg......

Two-way street Bill

DON'T SPEAK FOR "THE GROUP". I have had enough of your lying, and
that is the deal. The ONLY deal. Except that you lied in public, so
we will deal in public. Take it to the bank, Mister Smith. Mister
Fine Upstanding Amateur Radio Operator Smith.

> My opinion still stands

You did NOT express just an opinion. You categorically stated:

> With all due respect to the Mr. Cheek and the scanning community
> much of his information is based on Mr. Parnass's work at Bell Labs.

which is a slimeball, low-life, despicable, underhanded, lie. And I
challenge you to state your case. Get right down and specific with
it. You said it. Now back it up. Or simply admit you lied, to end
the matter.

> along with the developing opinion that the only reason you are here is
> to market your organization, sell books and subscriptions to your newsletter
> and contribute very little otherwise.

Now THAT *is* an opinion. Let me remind you how opinions, especially
unfounded ones, are a lot like rectums. Everybody has one, and they
all stink. You're sucking eggs, big time, on this one, fella, and
time will prove you dead wrong. THAT opinion bothers me not in the
slightest. You're right.....you are entitled to your opinions and to
express them.

So am I.

My name is Dave Edmonds, CPC (WB4AFP/m) and I am a recruiter for manufacturing companies located throughout the United States. I specialize in the placement of candidates in the technical, engineering, management and manufacturing support fields. All placement fees are paid by our client companies.

My reason for posting this info is to assist anyone who may be seeking a new position. I have found in my years of experience that there are many hams who are working in the engineering and technical fields. If you are seeking a new position, please fax your resume to us at (864) 288-2114 or give me a call at (864) 288-4848 or e-mail us at edmonds@teleplex.net.

I have been a ham for over 20 years and I would like to assist my fellow hams in their fulfilling their careers. I am located in Greenville, SC.

```
APRtrak summary for the SPRE mission:
=====================================

By: Bob Bruninga (WB4APR)
File: aprthlp1.txt
Date: 11-Jan-96

MISSION SUMMARY: The Shuttle orbit is 28 degrees and should be visible
by stations south of about 43 degrees latitude. It will deploy the
SPRE for about 46 hours and then retrieve it. (Beginning Sunday morning)
While it is free-flying, SPRE will be transmitting its GPS posit and a few
channels of telemetry using standard 1200 baud AX.25 but NOT in the
standard APRS format. The SPRE TNC (W3EAX) will also be available to
digipeat GRID SQUARE posits from groundstations on 145.55 MHz.

GRID SQUARE FORMAT: Stations without APRtrak or APRS may simply place
their 6 digit GRID SQUARE in the TO address of their TNC and transmit a
UI frame via W3EAX. This is done by using the TNC command UNPROTO
GGGGGG VIA W3EAX. If you don't know your 6 digits, use GGGGAA. Set your
BEACON to every 10 seconds or so using the BEACON EVERY command. (This
will not work on many TNC's that always send their BEACON to the address
of BEACON instead of whats in the UNPROTO command). If you use the
BEACON, PLEASE make your BText as SHORT as possible. A suggested format
might be: "25W into 13db beam." When you see your packet digipeated,
STOP transmitting!

If your TNC only sends beacons to BEACON, then you will have to place your
TNC into converse and TYPE your beacon each time. In this mode,
the UNPROTO TO address with your grid square WILL be used. Please do not
send a beacon any more often than once every 10 seconds and LISTEN between
them to see if you got digipeated. Once you see yourself, STOP and let
others have a chance...

USING APRtrak: APRtrak is a significantly modified version of APRS that
will parse the special SPRE posits and telemetry. Be sure you have
version 0.5. APRtrak, like APRS, has a special SPACE mode that will
automatically transmit your GRID-SQUARE posit and will display all such
packets received on the map.

DIFFERENCES BETWEEN APRtrak and APRS:
* APRtrak was donated to the AMSAT software library. Register with AMSAT.
* APRtrak plots the movements of up to 9 satellites using KEPS.
* APRtrak ignores most terrestrial APRS posits by ignoring all packets
that use MORE than one digipeater in their path.
* APRtrak will decode the SPRE position and TELEMETRY. APRS will not.
```

* Both have SPACE mode. (alt-SETUP-MODES-SPACE) which:
- automatically inserts your GRID-SQUARE in your transmitted POSIT.
- THe period between each POSIT doubles after each transmission to minimize QRM for un-attended stations
- If the SPACE DIGIPEATER is heard, then the POSIT period is reset back to a minimum value.
- If your OWN digipeated packet is SEEN on the downllink, then your POSIT period is FORCED to 9 minutes and a CONGRATULATIONS message is displayed!
- APRtrak places the TNC in MCOM ON. This way it will not only display all packets, but this mode also enables the automatic LOGGING of ALL packets.

OPERATIONS: Be sure to PRACTICE before the SPRE mission. APRtrak and APRS are a totally different approach to packet and take some getting used to... Most APRtrak commands are single letter commands. Many display an additional menu of single letter commands. F1 brings up the HELP menu. Although you may find some APRS activity on your local area APRS frequency (try 145.79) remember that APRtrak will ignore APRS packets using more than one DIGIpeater. Use the OPS-UNPROTO command to enter the call of the local digipeater; then practice... Find someone else that is in range of the same digi and see if you can see his posit.

Another way to practice is to tune in 145.55 and monitor MIR. DO NOT SET SPACE mode however, UI packets are NOT desired via MIR. Without SPACE mode you will only transmit a packet about once every 10 minutes. If you want to be sure that you dont transmit to MIR, toggle your xmter off using the CONTROLS-XMT command.

TROUBLES: APRtrak tries to properly configure your TNC, but the manufacturers all have different command sets. Be sure to set up your TNC for 9600,N,8,1. If you see garbled packets, check your manual and be sure to use the proper PARity command to set for NO parity. To talk to your TNC while APRtrak is running, use the OPS-COMM command. (Experienced APRS users should be careful to NOT hit O-C-T out of habit, because that will place your TNC into TRANSPARENT mode!)

SPRE SET UP: Although APRtrak will decode the raw telemetry values for SPRE, it needs to have the SPRE telemetry equations loaded before it can display the proper engineering units. Use the FILES-LOAD command to load the file SPRE.BK. This tells APRtrak to use the SPRE telemetry equations. USE THE ALT-T command to see the telemetry page...

A BIG problem with some TNC's is that they monitor their OWN outgoing packets even if they are NOT digipeated. This will automatically give you the CONGRATULATINS message and cancel further transmitting EVERY time you transmit a single packet in SPACE mode. Be sure that MXMIT or whatever is the command on your TNC is OFF. If your radio echos the XMT audio back in to the TNC, this problem will also occur. If you cannot get rid of your own packets, then disable SPACE mode but be sure that GRID-TO is enabled. I think this is on the CONTROLS menu somewhere. You can still force your POSIT or BEACON to go out every now and then using

the XMT-POSIT command.

BEACON TEXT. In APRS or APRtrak, your default BEACON will be your software version number. That is a WASTE of valuable bandwidth. Be sure to change it to something SHORT and meaningful using the alt-BEACON command. Mine will probably say "25W into 13 dB." or something like that. NO NEED TO SAY your call, or your location, Thats already in the packet.

777. DL0ART/am - 4th launch scheduled (01-14-96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-13 00:00:00 UTC
From: Oliver Welp <welp@uni-muenster.de>
Message-ID: <4d8j99$1gbg@majestix.uni-muenster.de>
Source record: 232321

We finally can do it...

DL0ART/am - The Nienberge Amateur Radio Group (Germany)
plans another balloon launch on Sunday, 01-14-96.

This is our fourth flight and will be the first one
carrying
a "user access". We`ll have a 70 cm/2 m crossband repeater
aboard. All hams are invited to use this facility. Please,
show appropriate ham spirit while using the repeater!

Planned ARTOB launch 01-14-96:

Launch: # 4
Launch date: 01-14-96 (Sunday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D &
F2A)
(2) Crossband repeater (F3E):
Uplink: 432.570 MHz
Downlink: 144.470 MHz
(3) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 2.5 W

Antennas: (1) groundplane
(2) big wheel - one for 70 cm, one for 2 m
(3) 70 cm: groundplane / 10 m: lamda/4

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater
Muenster,
DB0PD (R 84). Reports are welcome, please call DL3YBQ or
DL9QJ.
Or send QSL to DL9QJ via bureau, via PR or via Internet.
Each
report will be confirmed by a special QSL card of the
balloon.

Any suggestion or response is always welcome!
Best 73,
Oliver

>Avery
>

Hi Avery

You're right... amateurs not only deserve positive stories in the media, we NEED them. These stories are seen by your neighbors, who then might tolerate your antennas a bit more. And they are seen by legislators at all levels (ESPECIALLY in D.C.), who might look more favorably on things like antenna restrictions at the local level, to frequency allocations at the federal level.

But it won't happen by itself. Someone has to keep making your media outlets aware of what's happening, with specifics: WHO's doing WHAT, WHERE, WHEN and WHY. Names, addresses, telephone numbers! Make it easy for them to tell a positive human-interest story... and the WILL.

That person is usually called the PIO - Public Information Officer, aka PR Director, PR Flak, mouthpiece, ... oops, getting negative here :>)

The ARRL has field positions called PIO in each section. Is there anyone doing it in your area. Individual clubs can also appoint PIOs, but I recommend they go for the ARRL appointment as well. Check with your county EC or your section manager. The League supplies a "how-to" manual and lots of sample press releases, plus a newsletter with updates every month called "QSO Media." (It's one of the things the League does every month that only a few hear about).

It's not that hard. As the ice storm developed here in NC, I faxed a press release about the Skywarn operation to the papers and local TV stations,

and we got on the news on one station with an interview with the Skywarn
EC. He looked great!

Good Luck, 73

[See http://w3eax.umd.edu/spre.html for more SPRE info]

APRtrak - SPRE part-II
======================

By: Bob Bruninga (WB4APR)
File: aprthlp2.txt
Date: 11-Jan-96

Once you have APRtrak unzipped, loaded, and working with your TNC, and have READ all the files in the README directory, you will be able to rapidly move between the APRtrak screens to see the packets being parsed using several single Key commands:

SPACE BAR displays the map. Use PgUP/DN, HOME and arrows to ZOOM

L - LATEST. Will only display the LAST packet seen per station.

P - POSITS. Holds the posits of any stations reporting same.

A - ALL BEACONS. This is the chronological page of all NEW packets. It does NOT update in real time, so you have to keep pressing "A" each time you want to see the latest.

V - This is a conventional scrolling text display of raw packets

D - DIGIPEATERs. This display shows the packet headers being used.

alt-T - This page displays the telemetry.

Z - HORIZON. This is an interesting display showing what the SKY looks like from your backyard or wherever the MAP cursor is. To see the default horizon (Annapolis), center the map on your station and press Z. You can customize this HORIZON following the steps in SYSTEM\HORIZON.DAT.

alt-F FAST. This will make the satellites move FAST. It is interesting to watch on the HORIZON display.

NOTE!!!! I just discovered that APRtrak defaults to Mcom OFF. This will prevent you from capturing the REFLEX and other non APRS packets! Without Mcom ON, you also will not see the full packets on the ALL PAGE. To toggle MCOM ON, use the APRtrak CONTROLS-MCOM command.

APRtrak will then try to set MCOM on in your TNC. AEA TNC's use a different command which you will have to set yourself using the OPS-COMM mode to talk to your TNC directly.

Not only does MCOM in APRtrak turn on MCOM in your TNC, but within APRtrak it also ENABLES the saving of ALL packets including the HEADERS on the ALL page and subsequently that is what is saved in the LOG files. So even if you can't get MCOM ON in your TNC, be sure it is ON in APRtrak. When it is ON you will see it in the CONTROLS display (Hit the TAB key to show it).

Hope to see you on the map!

APRtrak and SPRE part III
==========

By: Bob Bruninga (WB4APR)
File: aprthlp3.txt
Date: 11-Jan-96

At the bottom of this file are the latest KEPS for STS-72 and MIR. In
APRtrak, use the FILES-KEPS command to update your KEPS from this file.

NOTES:
1) Use a DOS editor to change one of the existing satellite object
numbers in APR.ORB to the object number for STS-72. That is 23762
2) Now use the FILES-KEPS (NASA format) to update from this file.
3) Do NOT use the AMSAT format for updating, because it appears to
wipe out all the satellites and only bring in the new one...
4) If you accidentally wipe out all your satellites, you can copy the
APR.BAK file to APR.ORB and you will be back in business...

Be sure your DATE, TIME and TIME ZONE are correct.

Once SPRE is deployed, do NOT update your KEPS if you want to keep
tracking SPRE. If you want to update the shuttle KEPS, then use an
editor to change the name from STS-72 to SPRE and give it a fake OBJ
number. Then change another satellite to 23762 and do an update. But
remember that the shuttle does have to come back to the SPRE position to
pick it up.

KEPS
STS-72
1 23762U 96001A 96011.54980208 .00018263 14056-8 12334-4 0 25

Not sure this is correct. Doublecheck the new rules. I seem to recall
if the requesting party previously held the KH6 call sign, he/she
could request its re-issuance under Gate #1 despite where they
currently lived: KH6 or Continental 48.

Again, doublecheck the rules. The above is from memory only.

When I bought my '92 SL2, I first asked the dealer about radio installation. We went back to the shop and talked to the service manager, and reviewed the Service Notes. The only warnings were the usual ones about not connecting power thru the existing fuse wiring. No problems with the computer, etc. They even showd me how to pull the headliner down and remove moldings and seats to route the antenna and power wires.

I have a 45 watt dual-band mobile, a 25 watt 220 mobile and a 25 watt 10 meter mobile installed, with no adverse effects to the car. (The fuel pump makes a lot of RF noise in the 28 MHz area, though, masking weaker 10 meter signals -- I need to get that filtered).

I tapped 12 volt power from the bolt that connects the fuse block under the engine to the battery (there's about a 6" run of heavy guage wire from there to the battery). I punched a small hole for the wire in the grommet that surrounds the steering wheel -- I think -- and filled in around the hole with a sealer.

Things may have changed a bit since '92, but I'm sure you'll have no problems.

73,
Gary KN4AQ

The article mentioned covers a Satellite antenna/radio tracker. It's $370,
which is in the ballpark of the Yaesu interface. It works with the Yaesu
5400, but has a less sophisticated interface for other rotors.

Yes, I read about that some time ago in a magazine somewhere, perhaps at the barbershop. Seems that a hairdresser was dabbling with plastics and came up with a certain combination that defies logic. Saw the post on alt.conspiracy just a few days ago. Try "Earlier Posts" or "Earliest Posts" if you are using Netscape. Or try a search engine. Should be there somewhere. Best wishes, Henry.

Announcing the DXtreme Amateur Radio Station Log System(tm) Version 2.0

Designed for HF DXers, this affordable logging program lets you enter
your contacts and track the DXCC performance of your station.
DXtreme(tm) features attractive, easy-to-use screens, and a full range of
inquiries and reports.

PC/AT-compatibles, 80386DX+, MS-DOS 5.0+.

Write for a copy of the data sheet and more information, including how
to obtain the free Demo version of DXtreme. Contact me at
dxtreme@ix.netcom.com.

Thanks and 73,

Bob Raymond, NE1I

In answer to the fellow who asked how long FCC "holds" a call....

Under the vanity program, the call must be vacant for a
period of two years to be claimed by someone else.

There are two exceptions:

1 -- If the call was held by a deceased close relative
of yours, you can claim it (as soon as gate 1 opens). You
must be eligible for the call format.

2 -- A club can claim the call of a deceased member before
the two year limit. They need to get the written permission
of relatives of the deceased, and must already have a call
sign.

You can use the 147.320+ repeater and 442.075+ 100.0 Hz PL, both work
well quite a ways down into the Canyon.

Could I get your help in locating information on the products of the World Radio Laboratories (WRL) of Council Bluffs, Iowa. A book is now being written on the life of founder Leo Meyerson and WRL. WRL built and sold popular amateur transmitter products and electronic parts from 1937 to 1972. Originally known as Wholesale Radio Labs before WW II, WRL sold the popular Globe King, Champion, and Scout Transmitters now prized by collectors.

Although many WRL catalogs are in the Amateur Radio Collection at the Omaha History / Western Heritage Museum, a number of catalog years are missing:
1937,1938,1939,1946,1947,1948,1950,1963,1968,1972. If you have these catalogs, would you contact me for some questions? I want to index product model numbers and prices for each year.

Also, does anyone know the wherabouts of Samual J. Fidone, the designer of the WRL Globe transmitters during the 1940's and 1959's? His call sign was W0QAB.

Thanks for any help!

Its possible the tube is bad - However are you sure the trigger is
operating - the you might see if you can draw an arc from the trigger
transformer (4kV) if you trigger the flash.

Replacement tubes are usually available - but not cheap. In the US
Mouser Electronics sells them...

Also you might want to list on the rec.photo.misc ----- or other photo

: 73 de KB7ADL

Your comments point out the clear reason why code has little, if any,
relavence for today's testing. It is simply being used less and less,
it is no longer needed for any service outside the amateur bands and
it, therefore, no longer needs to be made a mandatory requirement
(beyond a 5wpm test for international treaty regm'ts.).

40 years ago everyone drove manual gearbox automobiles and everyone
knew how do to so...today we have major problems with drivers ability to
shift a stick shift....so what. If it isn't important to be sure
everyone that can drive must have the ability to use an outdated manual
gearbox, then why is it so important that every ham on HF learn CW at
13wpm to have access to the majority of ham HF frequencies?

I've always been a proponent of giving all current Novice CW subbands
to no-code techs so they have a place to "study" and send.

This really wouldn't violate the spirit of the ITU treaty since they
would have to "know" CW to use those bands.

I have a '93 Grand Cherokee Laredo with six and auto transmission. I use
VHF as well as HF. The only problem I have is that on 40M the rear window
wiper turns on when I transmit.

On all other bands no problem.

I use an FT900 with outbacker Perth antenna mounted to the Hatch. I
ground the antenna with a wire to the roof. Had very good luck on 20
meters.

Well thats a long story but I have a copy of all the information you need some
were also you can send a packet radio message to the R.A.A.G. and ask for info
they have a detailed file which you can look at. tha packet address is:
SV1SV @ SV1SV.ATH.GRC.EU
I try to get that file to put on the net....
73's de Andrew... Bye VA ..

Hi:
A few years ago, perhaps later there was a Net run out of the West Coast area around 14.300+ for Kenwood/Yaesu Users. I have yet to hear these nets on recently. Have they gone by the wayside?

Is there currently any such type of nets running. Any help would be greatly appreciated. Thanks

SB DX @ ALLBBS $OPDX.238
Ohio/Penn DX Bulletin No. 238

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 238
BID: $OPDX.238
January 15, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2DND, K8YSE, WB8LFO, K9UWA, NS0B, DF4RD, DL9GOA & DX News Letter, F6ARA, G4BUE & DX NEWS SHEET, PA0ABM, PY7ZZ and VE9RHS the following DX information.

3A0IARU IS A PIRATE! Daniel, 3A2LZ, reports his neighbour 3A2LU has been receiving QSLs for a station claiming to be 3A0IARU. This is not a legal station and this callsign has not been issued. 3A0 prefixes have not been issued since the mid-70's and this block of prefixes has now been "frozen". So, if you hear a 3A0 prefix, it is probably a SLIM.

3D2, FIJI. JI3CEY will be active January 25th through February 1st. His callsign is unknown at this time, but he will be active on CW/SSB and 80-10 meters (including WARC bands). QSL to home call.

3V, TUNISIA. Albert, F2KN, will be here until January 21st and he will try to be active from 3V8BB on his evening hours after his work. He will be active only on SSB.

3Y, PETER I ISLAND. The DX NEWS Sheet reports that R0FL/3Y/MM was active at 2327z, January 8th, on 10101kHz saying Peter 1st Island! It was reported last year that UA9OBO and RW3GW (perhaps together with other operators) left St. Petersburg in June to take part in a scientific expedition to the Antarctic lasting several months. This may be the same group and they were talking about going to Bouvet Island which was scheduled for the beginning of November, 1995. Maybe the expedition is behind schedule.

4U/KC0PA AND KC0PA/S0 QSL UPDATE. Rudi, VE9RHS, reports that 1800 QSLs to date have been mailed. He wants everyone to have a little patience, they (cards) are on their way, and all QSL cards received are now processed daily. Rudi also reports that apparently a number (HUNDREDS) have been sending their cards via the bureau to KC0PA. These are ending up at the Zero QSL Bureau. Tim is not listed at the bureau and does not have

envelopes there. Rudi has arranged to have the QSLs on hand at the Zero QSL Bureau shipped to him. This is expensive, and hopefully they will not be all insurance cards. All cards not addressed "via VE9RHS" from this date forward will probably be placed in the burn bag. The Zero QSL Bureau and Rudi do not have the funds to keep forwarding these cards. SO PLEASE ADDRESS THEM CORRECTLY. Rudi has received approximately 50 QSL CARDS that he cannot confirm. If you worked a station reporting to be 4U/KC0PA during the period of 2nd May 1995 to 25th May 1995, "YOU WORKED A PIRATE ". Tim was stateside at that time and not even in S0-land. Also, Rudi has received a number of cards for different bands while Tim was active on 20 meters. Unfortunately, Tim only has one radio, so he could not work two bands at the same time.

5R, MADAGASCAR. Gerard, F2JD (S79JD, 5Z4JD, etc...), is on the way to Malagasy, but due to his workload waiting for him upon his arrival, he does not expect to be active until next month. He will stay there probably until September. Gerard hopes to active on all bands (WARC included) on CW, SSB and RTTY after he gets the licence (of course!). QSL via F6AJA.

5R8KH AND 8P9CW QSL CARDS UPDATE. Jerry, WB8LFO, QSL Manager for both station reports the following: "Cards for 5R8KH (Karl), will go out as soon as he receives more logs. Last logs recieved were at the end of 1994..... 8P9CW (Dan, N8DCJ) operations in 1995. I (Jerry) have received nothing in the way of logs or cards. This is inspite of the many phone calls to Dan and promises to send the info to me. I know Dan has moved so his callbook address is not good. If I can't get Dan to send me the data, I will forward those cards I have received to Dan. I will advise as to the outcome through the OPDX Bulletin....."

ARE THE "/4U" CALLSIGNS ACCEPTABLE FOR DXCC CREDITS? The people at the UN have requested the OPDX Bulletin to print the following statement: "According to Bill Kennamer, K5FUV, "Administrator of the DXCC", operations using the United Nations calls (/4U) are accepted only if officially authorized by the ONU H.Q. (NEW YORK)."

HK0, SAN ANDRES. Bob, K1WGM, plans to be active as HK0/K1WGM for the ARRL DX Contest in February. This will be mostly a low band operation. QSL direct to K1WGM, Bob Annsell, 1 Archer St, Swampscott Ma. 01907.

KH9 DXPEDITION (Delayed one week). The Dateline DX Association announced this week that due to transportation difficulties out of Honolulu, the DXpedition team has been forced to delay their trip by one week. They report that their equipment was shipped to Wake Island and have already arrived. They state, "We are definitely going". Start looking for AL7EL/KH9 beginning February 1, 1996, through February 7, 1996. A full announcement will appear this weekend which will include their E-mail address on Wake Island and URL address.

P4, ARUBA. John, K9UWA, and Jean, N9PXF, are going to P4-land for the CQWW 160 CW Contest January 26-28th, as a multi-operator entry. The contest callsign will be P40I. The contest exchange should be "5NNARU".

They should be active from January 14th through January 29th. There will be lots of low band activity before and after the contest. Outside the contest, callsign may be P40/K9UWA. All QSLs may be sent direct to K9UWA at 4836 Ranch Road, Leo IN 46765 USA or via the bureau. Please send SASE or SAE plus IRC or green stamps for postage with all direct cards. Please do not send QSLs to the P4 bureau.
Mike, K4PI, will also be active from Aruba. He will once again be signing as P49I from January 22-29th. Mike will participate in the 160m CQWW DX-CW-Contest. Outside the contest, Mike plans to work the lowbands and the WARC bands.

PY0FZ QSL CARD UPDATE. Fred, PY7ZZ, reports that WX9X informed him that PY0FZ cards were airmailed to him on January 11th. So, Fred thinks that he will be answering cards in 15 days or so. He has already received a lot of cards most of them with 1 greenstamp which he has recently found isn't sufficient to pay return mail. A few guys sent extra-money with their QSL, so he will use it to cover the red balance of QSLs. He hopes the extra-money will be sufficient to cover the cards that he received. He would like to ask you guys to consider sending IRCs next time.

V3, BELIZE. Alan/NS0B, John/WC0W and Robert/WG9L will be active during the ARRL DX CW Contest in February. The three operators plan to be there (barring any transportation problems) from February 14-19th. This mainly will be a contest effort but there will be some operation outside the contest, mainly on CW but perhaps a little SSB, probably starting on February 15th after 1800z. Activity will be on 160-10 meters but no WARC bands (no antennas). Call sign to be used for the contest will be V31EV, but each operator will be using his own V3 call outside the contest. Look for NS0B signing V31EV, WC0W signing V31TP, and WG9L's callsign has yet to be determined. QSLs for the contest go to NS0B, for non-contest QSOs go to the individual operators USA call.

WORLD-WIDE WEBCLUSTER. The OH2BUA WebCluster is now capable of receiving input from the InterNet. The direct URL address to the last 15 spots, 3 announcements, 3 WWV's and the input form is:
http://www.clinet.fi/~jukka/summ.html

ADDED NOTE: Jukka's OH2BUA WebCluster is now linked to the NODXA's homepage (via K8YSE homepage, http://www.en.com/users/k8yse/nodxa/html) which always has the current OPDX Bulletin and at least 10 previous OPDX Bulletins available.

XW8, LAOS. Adri, PA3BWS, will be traveling January 16th, to Savanna Khet in Laos for a family visit. He will try to obtain a licence for his NEXT trip to Laos (in 1997).

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Hi OM's & YL's

My wife and I are heading south, to the Rio Grande Valley area, in late April. I was curious about the packet and 2m - 440 FM activity.

And, of course, I would like to make a contact, or two, with the local amateurs, to learn more about the area.

Thanks for reading, an hope to hear from you soon.

I've had trouble with the trigger transformer in several (cheap) flash units.
Tthe transformer is supposed to develop an 1-2 kv pulse. I think the failure
mode is an internal short (probably between layers of the secondary).

A cheap (often free) replacement can be had from your local color print
processor. Those throw-away cameras have complete flash units. Often, you
can get a couple of cameras just for the asking. The trigger transformer is
easy to identify.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 JANUARY AND FORECAST FOR 15 JANUARY - 17 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 13 Jan
Daily Proton Fluence >1 MeV: 1.9E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.5E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Jan 16 Jan 17 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Jan: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active

Estimated Indices : A K Observed A Index 13 Jan
Learmonth 16 2234 4432
Fredericksburg 18 28
Planetary 20 35

Observed Kp for 13 Jan: 3556 5521
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Jan 8 quiet to unsettled
16 Jan 8 quiet to unsettled
17 Jan 8 quiet to unsettled
COMMENT: Geomagnetic activity is expected to return to quiet
to unsettled levels for the next three days. Active conditions
are possible on 18 January.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Jan Normal Fair Fair-poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Jan Normal Fair Fair
16 Jan Normal Normal Normal
17 Jan Normal Normal Normal
COMMENT: High latitudes may continue to experience degraded comms
conditions for today.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
14 Jan -22

Observed Australian Regional MUFs:
Townsville: depressed 15-20% first half of UT day.
Sydney: depressed 15% most of UT day.
Hobart: depressed 30% most of UT day.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 Jan -20 about 10% below predicted monthly values
16 Jan 10 near predicted monthly values
17 Jan 10 near predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 14 January
and is current for interval 15 January only. Depressed conditions
observed first half of UT day yesterday. Continued depressions
expected for southern Australia region for first half of UT day.
Northern region comms should use the monthly Tindex of 10, as
depression not extending to northern region. Sporadic E layer
was observed frequently in the southern region yesterday.

JG>radio." and I am not so sure that I havent also.

JG>Jim, WA7NDD

Well, Jim, you could use my approach, although I didn't plan it this
way. Licensed in the 60's, I was an avid operator through my teens.
Went away to college and dropped radio for years. A friend got me
back into it in the 70's and once again I was very active. Hit some
killer sunspot cycles and worked a lot of DX on dipoles. Then I lost
interest again. At 47 I thought 'hey! I should get back into ham radio!'
Bought an Icom 2000H mobile and a Yaesu FT-11R ht and do a lot of
listening and a little operating now. The advantage to this approach
is you can dump all the old technology radios and start over with
state of the art rigs every ten years, and you tend to be more forgiving
of the hobby. VY 73, de WA8JDW - Mike

Here are some additions to Alan's (VE3XAG) message.

You know you're a ham when...

- The only time you get up at 6 a.m. is for a hamfest.
- You know you can run all your home appliances on your personal backup power.
- You have breakfast with a guy in England every morning.
- Your RACES/ARES bags are always packed.
- The cute girl with the KISS T-shirt asks what bands you like and you answer, "two
and twenty meters."
- You live in a shack.
- A clerk asks you to spell your name and you do it phonetically.
- In a conversation, you wait for the courtesy tone before speaking
- You hear a scraping sound when you go through the fast-food restaurant's
drive-up lane.
- A band opening is more important than a grand opening.

(I found this in the April 1995 Kilo-What, and the June 1995 Cochise Smoke
newsletters)

Best 73's to all - Scott (KB7TLE)

Ok, someone has to play the other side. Here it goes. The ARRL is great, I will try not to bash them around too much. :-)

The big question is why should hams get extra media coverage and turned into heros for doing the job the FCC has assigned us to do? I will refer you to the rules and regs, under the section that gives us our three purpouses for being in existance. As I recall the number one reason we are allocated frequencies, and given licenses is to provide emergency communications. By the act of becoming a ham you assume that role. It is very clear in black and white on paper. There is no question, these hams where simply doing the job. It's no big deal, the hams did the job just like the police, fire, and road services. Media coverage is reserved for hams that go above the norm. So I ask, what did these hams do that was above the norm? What makes them any better than say the camra man shooting the CNN viedo? The camra man was doing his job. The same can be said for doctors. They save lives every day, but that is their job. Take my job. I am a volenteer. I volenteered to defend the United States. So why should I get media coverage for doing my job? So saving lives by servicing the equipment that will keep aircraft flying is above the norm? Nope, thats my job.

Here is my point. Those hams that used ham radio for it's intended purpouse are doing what they should be. They are the norm, not the exception. The ones that abuse the spectrum are the ones to be drawing attention to.

You need to remember: you are not dealing with a rational person.

burt on Ham radio:

"ARRL has long posts!" (signed by a 25-line sig of useless info)

"Hams don't know about electronics! (starting with a challenge,
ending with an apology about how he didn't really know what he was
talking about).

And in other newsgroups..

burt on Weather:

"Todd Gross [our local weatherman] doesn't know how to predict the
weather" (followed with an apology to Todd).

burt on Marriage (his second, so far):

"My wife left me because she wouldn't listen to the facts"
(followed by an apology that he married too young)

And, by the way, the followup to this particular posting (excessive
sig) was something lame like "Oh, yeah?"

I am humbled in your presence, burt.

NOT.

Hi,

I've got a alinco dj-580 handheld that appears to be playing up.
When i turn it on it works ok for a few seconds, then it seems to go deaf on
2, and not transmit on 70 (but still tx's on 2, and rx's on 70). I have noticed
that when it is acting up, and you tx on 70 (or at least try to :-)), the on airlight
flashes.

has anyone got any ideas what wrong?

the radio working :))

833. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-15 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4deef8$sp5@lyra.csx.cam.ac.uk>
Source record: 232189
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,uk.radio.amateur,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief summary.

* Following recent discussions the full collection is
* not now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
15 January 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1956 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.
See also http://aviation.jsc.nasa.gov/alphabet.html, which
includes information about pronunciations)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

(See also http://aviation.jsc.nasa.gov/old-alphabet.html)

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details see the full list, which is posted at
intervals to sci.lang, rec.radio.amateur.misc and
rec.radio.info. It is also available on the World Wide Web
at:

http://www.columbia.edu/~fuat/cuarc/phonetic.html

http://www.cl.cam.ac.uk/users/bck1/phon.full.html

and this brief version is available at:

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi,

I'd like to thank all of you for your help as to my problem that TV
sets disturb shortwave reception.

If someone still wants to express his/her own ideas concerning this
issue, he/she may still do it.

Manfred

js@ibbs.av.org (Jeff Stillinger) wrote:

> The big question is why should hams get extra media coverage and turned into
> heros for doing the job the FCC has assigned us to do?

For the same reason everything else gets media coverage. I don't think
"extra" media coverage is warranted, but coverage commensurate with the
coverage given other organizations would be nice. You see all these other
groups getting coverage for doing their jobs, why should amateurs be
any different?

> Media coverage is reserved for hams that go above the norm.

Says who? If the only news was about people that "go above the norm"
we'd have very little news to read or see. An awful lot of the news
(perhaps all of it?) is to inform the readers or viewers about some
subject they presumably are interested in and may not know much about.
So when the Jaycees volunteer to fill sandbags to hold back flood
waters, that is news. When a fire fighter rescues someone from a
burning building, that is news. Did those individuals do something
that wasn't expected of them? No, they were doing their "assigned"
or agreed to role. Is it news? Watch the evening news and you decide.

> So I ask, what did these hams do that was above the norm? What makes them
> any better than say the camra man shooting the CNN viedo?

What does the camera operator have to do with the news *content*?
When the folks that bring you the news become the news, then something
is seriously wrong.

> Here is my point. Those hams that used ham radio for it's intended purpouse
> are doing what they should be. They are the norm, not the exception. The
> ones that abuse the spectrum are the ones to be drawing attention to.

Yikes! I hope I'm not interpreting that correctly. I hear you saying
that the abusers of the rules should be making the news? That will
certainly leave a positive impression on the general public.

I will gladly publish news on the Blizzard at Ham Radio Online. We created HR Online as a place to promote Ham Radio in a positive way. I even had a banner on our masthead looking for blizzard stories. Unfortunately, we didn't receive any substantial news on the subject. We welcome stories and can get them on the web quickly. We typically run 300 to 400 readers a day, both ham and non-ham. Take a look and let me know what you think. You can find us on the web at http://www.accessone.com/~vbook/hronline.htm

To get coverage in the "Real" press, you need to call the editor's desk and promote yourself. I've been at disaster scenes and successfully collared reporters and handed them a stash of notes on paper to give them something to work from. Be aggressive. Issue press releases. They are hungry for news but sometimes need help in finding it.

Ed, KF7VY

RIME is composed of a bunch of loud-mouth blow-hards. If you don't like
a topic, critize the moderator of the conference, or post something that
is "off topic" you risk getting blackballed.

> • Personalized: with RIME conferences, you can address a message
> to a specific person, as well as to "ALL." With the Usenet, you
> are forced to leave messages to "ALL," even when responding directly
> to someone.

There is no such thing as an "ALL" routing on USENET. All messages posted to
a newsgroup are readable by everyone by default. You can reply to a
specific person's posting, and threaded newsreaders will allow you to read
messages by subject and reply order if you do have the correct software.
This comment from RIME just demonstrates their ignorance.

> • Routed: like e-mail, RIME messages may be routed to a specific
> person, bypassing most other people. There really is no "private"
> mail in cyberspace, as the system operators can usually read every

"EMAIL" on RIME is just as readable as email on a system connected to
the Internet. Anytime anyone has the keys to the house they are free to
look around with impunity.

> • Family Orientated: RIME doesn't have ANY conferences dedicated
> to child pornography, beastiality, fetishes or other "adult" topics

Ask RIME about the time one of their network Sysops was arrested for
sexually molesting two teenage boys, and later plead guilty to a reduced
felony morals charge. Even after the conviction RIME allowed him to

continue to run a BBS on their network (great place to troll for new victims, huh?)

I'll admit it now. I haven't a clue why some people want to change
the USA's incentive licensing system. Actually, I have never said
otherwise, so I'm rather puzzled by your question - have you perhaps
misread my posting?

> Go elmer some "lazy" individual and make a contribution instead

See 'Elmers' list which is posted in this newsgroup every quarter.
You will find my name on it. I didn't see *yours* on the latest issue.

> PS Please explain the (il)logic behind your claim that testing
> indicates a "good positive attitude? What a laugh.

I didn't say that. I said that claiming the system is incorrect in
order to excuse one's own laziness shows a bad attitude.

BTW, as you may have noticed from the callsign, I'm from the UK.
I've always believed that the US system as it stands now is far
better than our own, where with a single level technical test and
a 12 wpm morse test one gets full access to all HF bands. Our system
leaves nothing to strive for, no room for ambition and does nothing
to encourage further learning after the licence arrives. The USA's
incentive licensing scheme is, IMHO, infinitely better.

Um, that means...you think amrad should *not* be in the news media?
I don't think that was what was meant. But you bring up a valid point.
Modern hams seem to have become a "forgotten" group, unless you are in a
"ham-rich" environment (say, in the neighborhood of Johnson Space Center).
One person I spoke with recently expressed surprise that hams even still
existed!?
By all means, hams have *got* to get better exposure, or else we run the
risk of ceasing to exist.
Cheers...

In the US, it is illegal to encrypt any communications on the ham bands.
Is this true in other countries? Is it an international thing?

There was a post on packet over the weekend from someone outside the US
suggesting the use of PGP for encryption on packet. I suppose it would be
OK to use PGP for digital signatures, but using it for encryption is a
no-no here in the states. How about elsewhere?

John Wagner wagnerj@watt.oedison.com

Burt Fisher <k1oik@ccsnet.com> wrote:

There is a BBS network called RIME that thinks it is pretty hot stuff but I do
not. They think they are far better than NEWSGROUPS but ON RIME tin Gods
act as "hosts" that stifle all debate. Send a message to fhagen@pe.com if you
agree with me that the Internet is where it is really "happening."

I realize I am not Mr. Popularity here but those that are here are not
afraid to speak their piece and with rare
exceptions no one really gets foul.

Am I right or am I wrong, a fair subject for DEBATE

Why is RIME is not better than USENET?
(the lies of RIME)
RIME says:

ï¿½ Personalized: with RIME conferences, you can address a message
to a specific person, as well as to "ALL." With the Usenet, you
are forced to leave messages to "ALL," even when responding directly
to someone.

I have no problem sending to either ALL, BOTH or either on USENET.

Rime says:

ï¿½ Routed: like e-mail, RIME messages may be routed to a specific
person, bypassing most other people. There really is no "private"
mail in cyberspace, as the system operators can usually read every
message that appears on their systems. But RIME's unique routing

Wrong again I have had conference hots intrude on what I thought were
private conversations. They look from time to time at what you write.
On Internet I never had that experiance.

Rime says:

In addition, "off-line readers" allow easy downloading to read
the messages without the "Internet Service Provider" meter ticking
(and tying up the phone line!) while you are trying to scan those
10,000 conferences!

I use an off line reader on the Internet. Stop the lies RIME.

RIME says:

ï¿½ Family Orientated: RIME doesn't have ANY conferences dedicated
to child pornography, beastiality, fetishes or other "adult" topics

like the thousands that exist in the Usenet. Instead, RIME has
adults, teens and children conversing about topics without using
profanity, "flames," obscenity and other objectionable language.

Well I cannot say BS but read the following and tell me what family that
belongs in:

BBS: ï¿½ï¿½ Cape Cod Salt Air BBS ï¿½ï¿½
Date: 01-07-96 (19:39) Number: 10824
From: Refer#: 10770
To: BURT FISHER Recvd: NO
Subj: Insult Alert. Conf: (10) HAM

Well gosh Burt, I can do much better then that. Your lower then whale
s**t and that's on the bottom of the ocean. One other thing, eat me
p**sy lips.

Source record: 232222

Many readers from this group have already visited the radio amateur pages below:

http://www.innotts.co.uk/~asperges/

and left about 250 messages for me since December '95. Thanks. I have replied to all of them individually.

I'm thinking about making a new page for SWLs, who don't seem to be catered for quite so well elsewhere, but I should like some feedback before doing so: should there be FAQs? links? Should there be pointers to schedules etc etc. Should the style be same or different from the other pages?

If you have some ideas for SWLs, please e-mail me from the pages.

I am still collecting links for the "Friends on the net" for other amateurs with home pages they would like networked.

> otherwise, so I'm rather puzzled by your question - have you perhaps
> misread my posting?

To quote your post since you left it out:

"as opposed to those who excuse their own laziness by continually
complaining that the system is wrong..."

If that doesn't imply that those who complain are lazy, then perhaps
British english really is a completely different language. ;-)
Perhaps you weren't trying to imply that all who push for change
are lazy, but I ask: How do you know *anyone* is lazy simply
by observing them promote change? To help you out: You can't.
So while you may feel smug and believe that those advocating
change are trying to do so to avoid having to do something you did,
you can't possibly know their reason for their advocacy outside
the reasons they give. I have yet to hear anyone advocating change
because they claimed they were lazy. Try any introductory psychology
text and look up attribution theory.

>> Go elmer some "lazy" individual and make a contribution instead
>
> See 'Elmers' list which is posted in this newsgroup every quarter.
> You will find my name on it. I didn't see *yours* on the latest issue.

Because I've always failed to see the point in an "elmering" list on
the Internet. If someone needs help with something, they post their
request in one of the related newsgroups, and myself or someone
else provides them assistance. What is another "list" needed for
except to make the above claim. Keeping a discussion to private mail
only elmers one individual. The newsgroups offer us the opportunity
to elmer many in one fell swoop. As far as off the Internet, come
visit the radio club I sponsor at the local elementary school or the
shacks of the various amateurs I've helped get started or set up.

The kind of elmering that Hans was refering to was either in person
or on the air. Particularly with regards to operating procedures, on
the air elmering is needed. Someone isn't likely to get much
assistance in their operating practices on the Internet or in getting
flamed on the local repeater because they happen to have called CQ or
used a 10 code. From the discussion in this newsgroup, many apparently
were born naturally good operators and they hold all others in such
low regard as to revile them for not being so born.

>> PS Please explain the (il)logic behind your claim that testing
>> indicates a "good positive attitude? What a laugh.
>
> I didn't say that. I said that claiming the system is incorrect in
> order to excuse one's own laziness shows a bad attitude.

To re-quote you again: "it does show that they had a good positive
attitude at the time they took the test". How can you *possibly*
know *what* their attitude was? The test certainly doesn't measure
attitude, at least not the ones offered in this country.

> BTW, as you may have noticed from the callsign, I'm from the UK.
> I've always believed that the US system as it stands now is far
> better than our own, where with a single level technical test and
> a 12 wpm morse test one gets full access to all HF bands. Our system
> leaves nothing to strive for, no room for ambition and does nothing
> to encourage further learning after the licence arrives. The USA's
> incentive licensing scheme is, IMHO, infinitely better.

I guess I'm of the belief that if someone needs the government to
provide them incentive to improve their technical or operating
skills, then we could just as well do without them. There is *plenty*
of room for ambition and things to strive for. Just listen to any
non-WARC band on almost any winter weekend to find out what many strive
for. ;-) Besides, unless the tests are increased in difficulty to
the level of the college boards or final exams in undergrad or
graduate level courses, all the tests will ever show is that someone
at some time could get the correct answers to some multiple choice
questions. Big incentive. Big deal.

Besides, as your final line said:

"<asbestos suit on, fire-extinguisher ready>"

it only seemed natural to oblige you. :-)

From: Chuck Curran <ccurran@earth.execpc.com>
Message-ID: <30FAF4A0.C3C@earth.execpc.com>
Source record: 232224

I need help to identify the model number on an old Heathkit Grid Dip Meter from the early 1960's I believe. I would like to use it but I can't get a photocopy of a manual from Heath unless I already have the model number.
This unit is about 2 1/2" wide x 3 1/4" high x 7" long. It has a manually adjustable scale at the top with 6 different ranges on a circular scale. I do have all the plug in coils and they are all in very good shape. In the middle of the front is some lettering that says:
BOTTOM SWITCH
<-- DIODE OSC. -->

Below that on the left is a head phone jack and to the right of the head phone jack is knob labeled SENSITIVITY. At the very bottom is a meter labeled GRID CURRENT. Inside now is a 6AF4 vacuum tube--I don't know if this is the original or not. It also has a 16 mfd. @ 150 VDC electrolytic (blown) if that helps narrow down this model. After all that, my question is: Does any one know the model number of this unit? I'd sure like to try it out but the manual would sure help. Thanks in advance for any help!

I'm developing Macintosh shareware software to control the Lowe IF-150 and IF-250 receivers. I have software ready for testing, but don't actually have a Lowe receiver. That's where you come in. I need people to test the software, report bugs, and suggest improvements/features. In addition to helping to shape the software, you'll get a free copy of the final version.

If you're interested, please send me email. You'll need to be able to receive attached files via email, containing versions of the software.

Thanks,

Chris

The media does pay attention if they get the information. Last Saturday's Hartford Courant had a front page article about a local ham's involvement in Skywarn. It was a very good human interest story, in part, because the ham is blind. The story tells a lot about the best part of being a ham. Overcoming personal obstacles, contributing to the community, etc.

If your newsmedia hasn't found your story, feed it to them.

SB QST @ ARL $ARLB003
ARLB003 FCC proposes to suspend amateur use of 76-77 GHz

ZCZC AG82
QST de W1AW
ARRL Bulletin 3 ARLB003
From ARRL Headquarters
Newington CT January 16, 1996
To all radio amateurs

SB QST ARL ARLB003
ARLB003 FCC proposes to suspend amateur use of 76-77 GHz

In a Second Notice of Proposed Rulemaking in ET Docket 94-124, issued just before the Federal shutdown in mid-December, the FCC has proposed amending Part 97 of its rules to ''temporarily disallow amateur use of the 76-77 GHz band,'' which the FCC hopes to open for commercial development along with other ''millimeter wave'' frequency bands above 40 GHz. The band in question is part of the 75.5 to 81 GHz allocation, which the amateur and amateur satellite services share with other users on a primary basis from 75.5 to 76 GHz, and on a secondary basis from 76 to 81 GHz. The primary allocation of 76-81 GHz is assigned to radiolocation, including radar.

The commission says the change will permit development of vehicle radar systems in the 76-77 GHz band that could be used in conjunction with Intelligent Transportation Systems. The FCC says restricting ham use of 76-77 GHz will prevent potential interference to these developing systems. At the same time, the FCC proposes to upgrade amateur status in the 77.5-78 GHz band from secondary to co-primary with government and nongovernment radiolocation services.

In earlier comments, the ARRL objected to limiting the 76-77 GHz band to vehicle radar systems. The League said it wanted to maintain existing ham allocations from 75.5 to 81 GHz to spur development of short-range, high-speed data links. Because of the Federal government shutdown, the deadline for comments on the FCC proposal has not been set but will be 60 days after publication in the Federal Register.

> wrongly called SOS (there aren't any spaces in the distress signal).

I concur that CQD was current before the SOS prosign was introduced, but
I had always assumed that the former signal was CQ/Distress and that it
was dervied from the pre-exisiting CQ call and not the reverse. Also
CQ and CQD were always sent as discrete letters and never as a single
prosign.

Subject: RB413 Emergency Mgt 1/6, The OA

To: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 413: MGT-Emergency Management, 1/6. For release 1/15/96
[First of a six part series to be issued over a 6 week period.]

Query: What is an "Operational Area"?

Response: An Operational Area (OA) is an organization for
emergency management. It is more or less synonymous with a
county, yet different. The OA is a functional organization, and
NOT a jurisdiction. Its boundaries are normally those of a county
(Sec 8559 CA Gov. Code). An OA is not necessarily a county
government; it could be several cities, or a city and a county, a
county government; or several county governments that undertake
to coordinate the flow of mutual aid and information within the
defined area. The OA is the backbone of a statewide emergency
management system. Operational Areas in California serve 58
counties and geographical sub-units such as the Tahoe Basin.

The Operational Area (OA) serves as an integral aspect of a
STATEWIDE EMERGENCY MANAGEMENT system. Although code defined
in California, it can apply to other jurisdictions in function as
well as conceptual form.

A STATEWIDE EMERGENCY MANAGEMENT system is the means of adjusting
flow of resources (both human and material) and information
BETWEEN JURISDICTIONS of all levels of government in a state. It
speaks to what resources and information are needed, how these
resources and information are requested; from whom, by whom,
using what forms, what terms. This is called a Mutual Aid system
in some states and in California. More about that system in part
two of this series, next week.

From: W6WWW@bbs.races.sandiego.ca.gov
Subject: RBA07 EMCOMM Directory

T0: Leaders of ARES, Auxiliary Communications Service (ACS),
DGS, clubs with MOU, Red Cross, Skywarn, REACT & others

Several years ago WA6SLA, Bill Pennington, ARES DEC, OES Region
IV Radio Officer, put together a directory of units in thirteen
counties for the collective benefit of unit leaders. It listed
EVERY KNOWN UNIT that had emergency communications response
capability or responsibility. It soon spread to 29 counties.

Recently, Tim Powers, of the San Diego RACES, volunteered to
act as the point of contact to assemble a directory for other
areas for which one is needed.

Why a directory?
- In numbers there is strength; Leadership can be lonely in
any unit, but especially the smaller ones; so knowing others
with similar responsibilities proved to be immensely helpful
- Increased knowledge of the potential reserves for use in
mutual aid situations.
- It lead to semi-annual gatherings of the unit leaders
which provided these results:
.. discuss common problems and challenges,
.. share information
.. update mutual aid resource information
.. familiarization with evolving concepts
.. sharing solutions
.. brought together units that had never shared
their common interest - community service
.. there is really no equivalent to knowing
other unit leaders face to face.

Not a unit leader? Then please pass this along and/or send
their e-mail address to me. If a directory of some or all of
your area exists, please send a copy to the address below.
No e-mail? Use packet and send it to me and I'll pass it on.

Areas from which the information is needed for ALL units:
Inyo, Mono, San Bernardino, Riverside, San Diego, Imperial,
Orange, Los Angeles, Ventura, Santa Barbara, San Luis Obispo.
Send the information to: staff5@races.sandiego.ca.gov

In OES Mutual Aid Region II (Del Norte to Monterey) partial information has been accumulated, but needs updating. For that area send the information to: wep@oes.ca.gov

What's needed:
- location and affiliation (ACS, DGS, RACES, REACT,etc)
- contact (usually the leader, such as Radio Officer, EC) name, address, phone (how to contact for more info) fax, pager, cell phone, e-mail and packet address.
- Repeater and used frequencies. Other essential facts.

When complete the directory will be released to Emergency Response organizations (only) within the state, so please mark any data (cellphone, for example) that is sent for contact purposes and NOT for distribution outside of your organization and state OES.

" Leadership - The ability to recognize a problem before it becomes an emergency." (Arnold H. Glasow)

Thanks for helping!!

Cary Mangum, Chief Radio Officer, State ACS, Sacramento.

878. Tech Question on Motorola Trunking

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-15 00:00:00 UTC
From: Joe Cardani <IE17n1l@TJUVM.tju.edu>
Message-ID: <4de7g4$l2f@mail.TJU.EDU>
Source record: 232234

A few years ago, an excellent technical overview w
relating to how Motorola Type I trunking systems operated was
posted. From the posting, I understood the following:

On the system data channel, a "channel grant" is transmitted to
the mobile/handheld radio. This grant (or outbound signaling word)
"OSW" is sent twice in rapid sucession. IThe word s 84 bits in length
and is sent at 3600 bits per second.

It includes the following info:

1. Individual ID of radio
2. Fleet/subfleet of radio
3. Type of Call (individual or group)
4. Number of voice channel to be used (ie channel to switch to)

My questions are relating to this OSW: and are:

1. Is the above data transmission sync or async? If async,
are there any start or stop bits associated? If sync, what is the
best way to identify the start of the word?

2. Is there any parity or error correction included in the OSW for
the channel grant? If so is it at start or end?

3. What are the length and positions of the elements within the
channel grant osw? (eg. the radio id is the first
position and is x bits long , etc)

4. In addition, in the absence of the channel grant OSW 's ,
background OSW's are transmitted by the data channel.
How can I indentify these OSW's a
as well as the channel grant ones?

Thank you so much in advance. This information will provide
extremely helpful in my understanding of the system.

Joe Cardani

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows,reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club. Access it at: http://www.barc.org/barc/ham-more.html

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 JANUARY AND FORECAST FOR 16 JANUARY - 18 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 14 Jan
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.6E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Jan 17 Jan 18 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Jan: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to minor storm

Estimated Indices : A K Observed A Index 14 Jan
Learmonth 17 3333 5232
Fredericksburg 13 24
Planetary 15 23

Observed Kp for 14 Jan: 2236 4334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Jan 13 unsettled
17 Jan 8 quiet to unsettled
18 Jan 16 active
COMMENT: IPS Geomagnetic Warning 1 was issued on 15 January and
is current for interval 18 January only. Geomagnetic activity
is expected to initially decline, then increase for 18 January.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Jan Normal Fair Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Jan Normal Fair Fair
17 Jan Normal Normal Normal
18 Jan Normal Fair Fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
15 Jan -36

Observed Australian Regional MUFs:
Townsville: depressed 30% local day, depressed 15% local
night.
Sydney: depressed 15-20% local night hours, with spread F.
Hobart: depressed 30% most of UT day.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Jan -5 Near predicted values for northern region, depressed
10-15% southern region
17 Jan 10 near predicted monthly values
18 Jan 10 near predicted monthly values
COMMENT: Depressed HF conditions were observed yesterday. Depression
was observed from Hobart to Townsville. Frequencies in southern
region are expected to be initially depressed then returning
to near predicted monthly values.

It's all of the plastic they use in the car. The only noted problem with my moms car was when we took it to Las Vegas one weekend. It seemed that the transmission failed to shift, and the cruse control also malfunctioned during the trip. This after transmitting 5 watts from a HT. Once the car stopped, the computer reset it's self.

I think these problems occured due to a lack of sheilding the onboard computer from the world. There is also a limited ground system in those cars. The lack of a hardend steel frame can cause ground loops from hell. Since there is no frame to ground things to, wire needs to be ran.

You may find antenna problems too. Not so much with tuneing them, but with proper patterns. All in all I am glad I got my Jeep. I almost got a Saturn.

>
>Back to the original question. I haven't had any problems with a dual band
>mobile in the Saturn. After all, airbag electronics have to tolerate
>driving by 950,000 watt TV transmitters without exploding.

Yeah, but the car is more than 1000 feet from the radiator of that
TV signal (vertical separation), and our good friend the inverse square
law says the signal strength of a 1 watt radio in the car will equal the
strength delivered to the car by that megawatt transmitter over 1000 feet
away (the broadcast field strength will actually be even less than that
because the main lobe of the antenna will be aimed at the horizon (about
30 miles away) and you'll be well below it). If you run more than 1 watt
in the car, you'll have to contend with field strengths *in the car* that
are greater than you'd get driving by any TV broadcast facility. That's
why a 5 watt HT can disturb car electronics, but driving by a megawatt
TV broadcast transmitter plant won't.

Antenna height is your friend, something we should never stop reminding
the public, and public officials.

Gary

The "every 15 kHz or so" you refer to is actually every 15.750 kHz, which happens to be the horizontal sweep frequency. Very steep wavefronts are generated in the flyback circuit, which produces RFI all over the place!

Good luck on avoiding it!

You need to use a 2Meter receiver on AM with the yagi. And, a 440MHz receiver on AM with a 440MHz yagi when you narrow it down to a few power poles. A scanner with selectable modes works.

>source?

Instead of trying to DF the noise on 40 meters you might get yourself
a VHF AM (aircraft?) handheld/scanner and use your VHF yagi to track
down the noise. It's important to use an AM receiver or one of those
multi-mode units. FM just doesn't work for this job. Using that
technique you can easily point to the source.

73 and good luck!

I picked up a new book the other day at the bookstore on Hyde St. Pier, titled -Wake of the Wirelessman-. The author is B. J. Clemons, and the subject of the book is her father, Dale Clemons, who was a shipboard wireless operator for the Marconi Co. from 1914-1916 and 1917-1918, including a very interesting trip to Italy from New York on the VIGO, a cargo steamer that still had sails, after the US entered WW1. It's based on his journals, writing, and on much research by the author.

Dale was a a licensed radio amateur in 1916 with the callsign 9VW and was W7AE in 1968 when he died.

The book was published just this month by The Glencannon Press of Palo Alto, and has an introduction by Capt. Walter Jaffee, who has a nice plug for hams in the introduction.

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

Give it a try, and let me know how you like it (we are still beta testing)

Ahh that was pretty easy to find the URL

try www.dfw.net/~dmclean

It worked for me

Too bad we can't replace morse code for questions like this !

Unfortunately the Blizzard of '96 buried the Spartan Packet Radio
Experiment on board STS-72. We kept faxing and calling local media, but
we got several comments that due to the snow situation, there would be
little room for other stories.

Message-ID: <4dhbe0$32q@flare.syd.ips.oz.au>
Source record: 232006
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 JANUARY AND FORECAST FOR 17 JANUARY - 19 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 15 Jan
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.2E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Jan 18 Jan 19 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Jan: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 15 Jan
Learmonth 8 2222 2223
Fredericksburg 8 15
Planetary 10 12

Observed Kp for 15 Jan: 4323 3223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 Jan 8 quiet to unsettled
18 Jan 16 active
19 Jan 10 unsettled
COMMENT: IPS Geomagnetic Warning 1 was issued on 15 January and
is current for interval 18 January only. Recurrence suggests
active conditions for 18 January.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Jan Normal Fair-normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Jan Normal Normal Normal
18 Jan Normal Fair Poor
19 Jan Normal Fair Fair-poor
COMMENT: High latitudes may continue to experience degraded comms
during interval 18-19 January.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
16 Jan -19

Observed Australian Regional MUFs:
Townsville: depressed 15% local night, blanketing sporadic
E layer observed local day.
Sydney: No data.
Hobart: depressed 15% most of UT day.
Darwin: No data.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 Jan 10 near predicted monthly values
18 Jan 0 about 5% below predicted monthly values
19 Jan -15 about 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 3 was issued on 16 January
and is current for interval 18-19 January. Depressed HF conditions
were observed yesterday, southern Australian region. Depression
forecast for 18 January is expected to mostly effect southern
region. Frequent blanketing sporadic E is expected for southern
region today.

Someone said:
>Someone talking on a radio is BORING to see and is over in a flash.
>No film at 11.
++++
That's not necessarily true. As a newspaper editor, I've run some very interesting stories involving people talking on the radio -- hams in Russia chatting with the outside world during the collapse of communism, for example, involved a photo of someone talking on a radio. Likewise, Bosnians describing the woes of the ex-Yugoslavia on 20 meters, hams detailing catastrophes from within the countries affected, and much else has provided us with some well-recieved news stories. A couple of them made it to the wire service. If the hams involved hadn't called us, the stories wouldn't have been printed.. There are very good stories to be had from ham radio if only the hams themselves would make an effort to get in touch with local newspapers and TV stations. I really think the assertion that hams shouldn't get media coverage for doing what the FCC licenses them to do is a bit silly.
As I've said before, make an effort to contact the media about your efforts rather than just moaning about lack of coverage here and on your local 2-meter squawkbox. I suspect you'd be surprised at the results....

I suggest that fourty years ago you had a lot of ex-military operators occupying the amateur ranks. Since these guys did nothing but listen to Morse code for eight hours a day for years at a time, it's no wonder they could copy at 30+ wpm.

>any different?

the other groups make sure the press knows about what's going to happen
before the event takes place. over the 24 years i've been in amateur radio, most
publicity is an afterthought...people get out to FD and autopatch back into
someone to try to get on the schedule of known events a reporter may be
trying to cover. too late -- you needed to tell 'em a couple of weeks earlier..

in general, publicity is an afterthought in amateur radio. you need to be a supplier
of known quantity and quality - for example, i've been doing the press releases
on the radio exams for the last 10 years or so. not fancy but it helps keep a drone
of information going into the newspapers/radio/tv and that helps keep amateur
radio in the 'Current File'. the notice for Feb's exam will go out just after the
exam in january.

>:and wonder where all the hams have gone when the FCC is selling off your
>:precious frequencies!
>: de Bruce - KD6SKA
>:>

Your words......not ours. :)

I might add...most of the rift between "classes" is... many of the
beginners' utter contempt <jealousy?> for those who have "earned" a

ticket containing more privileges. I see a vastly greater number of beginning class hams complaining about the more experienced class hams than vice-versa.

Instead of asking for help, now everyone goes on the defensive. Is it a crime to admit you don't know something and need the help of someone who has more experience...someone who has labored through the books...through the trial and error...?

Used to be the more experienced class hams looked forward to helping the new folks out in this hobby. They were and still are called "Elmers." It seems, though, that the new class of license comes with an attitude now. "I know my stuff <at least I'll act like I do> and I am not going to let anyone tell me differently...no matter how incorrect or misled I may be."

Luck Hurder, KY1T, once said <and I paraphrase>, "This is a very loud form of communication."

Anything said over packet, Internet, and like media has the reader's undivided attention. You can take anything said via this forum and it will be amplified many times over in the mind of the reader...moreso than in face-to-face conversation. Emotions run high as we are so quick to say our piece without giving much thought to its content. Our egos demand that we say our piece as if ours is the only one that matters. Who cares what the next guy thinks?

Some of the language used in this perpetual battle between "the haves and the have-nots" is proof that we have a lot of growing up to do. It amazes me that many of us got into the hobby because it was fun (some of us have been doing this for the majority of our lives) and for many the fun has gone by the wayside. They remain however.... and all their efforts are focused at taking the fun out of the hobby for those who nurtured it to where it was before its knees began trembling.

Many could care less about the hobby anymore...many are scared away from the it...and for many, the only thing they care about is all they can get with a minimum amount of effort...to the detriment of amateur radio.

Now a question....if the hobby is that bad...why are you still in it?

WK1V

HAM RADIO CAN STILL BE ENJOYABLE!!!

P.S. This ham is no better than the next. If you want to elevate my status that is up to you..it is not necessary. I have only been a ham for 15 years..obtained a Novice ticket <KA5MWD> because I wanted to. SWL'ing intrigued me to the point that I wanted to talk around the world.

I operated CW-ONLY for the first year and upgraded from Novice to General <N1CLS> because....I wanted to. I did what was required of me to obtain the higher ticket. Then I upgraded again <KB1LW> because... I wanted to...to get almost twice the frequency privileges. I was having a ball on amateur radio. I told myself that when the first call area got into the "W" two by one calls that is when I would upgrade to Extra. That is what I did in 1990. <WK1V> I didn't do this to be better than anyone. I could care less about anyone else's hang-ups about me being better than them or vice versa.

If it wasn't for the Extra Class or Advanced Class or maybe even the General Class ham that attended/administered the VE session where you got your ticket....You wouldn't have your ticket...think about that.... :) Is this like biting the hand that feeds you?

Hello to all:

Come a take a look at my new web page. I have been working on it for the last 4 weeks. I have lots of thing that you will like. Some of the things that I have are: MODs, Swap Shop, Dfw repeter list, comment page, links to other good ham pages, call looks ups (updated by the sec), radio pricing, Links to QRZ,FCC,HRO, and many more. If you are a ham and would like you web page added to my list just send me e-mail. Please tell me what you like and dislike about the page. I want all types of comments. Hope you like what I have.

Andy
I had the same fault about two years ago it turned out to be a
problem with the switching circuit that controls the band change
over, Mine was fixed by Walters & Stanton took,about 2 weeks I don't
know if it's a regular fault but it was fine afterwards,

912. ARRL VHF Sweepstake

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-16 00:00:00 UTC
From: mcaron@riq.qc.ca
Message-ID: <NEWTNews.821785057.29704.Gothmog@riq2820.RIQ.QC.CA>
Source record: 232103

ARRL JANUARY VHF SWEEPSTAKES.

From VA2MRX (FN46)

The upcoming VHF contest, the station VA2MRX will be contesting as a
Limited Multioperator from January 20st 1900UTC to the 22nd 0400UTC.

5 Operators will be working the station. Our goal is to make over 100 QSO's.

We will be on these frequencies.

2m: SSB: 144.200 Mhz
FM: 146.550 Mhz
70cm: SSB: 432.100 Mhz
FM: 446.000 Mhz
10 Gig: WFM: 10250.000 Mhz.

We think we should be able to work people over 150km if conditions are
not too bad. This means that stations from FN47, FN57, FN36, FN46, FN56,
FN35 and FN45 should be able to ear us.

Here are the operators:
VA2MRX, VE2ETX, VA2OLM, VE2JTX, VE2LTX

Hope to ear from you and good luck with conditions.

We can be contacted for SKED (time/frequ.):
Packet: VA2MRX@VE2GPQ.#QBC.PQ.CAN.NA
Internet: mcaron@riq.qc.ca
Compuserve: 76162,3430

Hello,

If you would like a full feature Broadcast Radio Station Database with at least 4,000 records already entered, send your Postal Address via Email to chuck@flinet.com. The program will be send back in return Email..

The address is for registration purposes and is necessary to receive the program..

This program is a stand alone program that runs from the C prompt of your computer. No other programs are necessary...

The program can be edited and updated with an indefinite number of records.

Don't forget the Postal Address....

hope to hear from you

Chuck

Howard Mason was one of the radio operators with the Byrd Antarctica expedition. On 12. January 1930 he established contact with Ernst Krenkel (later RAEM) at the Russian UPOL base (first flight to the North Pole). At that time they set a ham radio long distance world record.
We are working on an Ernst Krenkel research project and would like to find out Howard Mason's call sign and any further information on that QSO (must have received much attention in radio magazines...)
Can anyone help?
Thanks

: Chuck Curran WA9POU

I have the 1958 Heathkit catalog here. I shows a model GD-1B which fits your description except that the picture clearly shows the model number on the front panel. I once had an earlier model which I think was identical except for the front panel color. If you send me you mailing address, I'll mail you a copy of the catalog page. It has the schematic diagram.

It should be labeled right in the middle of the unit on the front panel.
They made 3 variations of the GD-1. The original was the GD-1, followed
by the GD-1A, and finally the GD-1B. Look for the model number
just below the dial readout.

In response to Mike Gathergood:
If the U.S. system of Incentive Licensing (1966) HAD
been executed as planned, one might agree with you.
Unfortunately, Incentive Licensing never actually
came to pass, because eased requirements into the
hobby, beginning in the early 70s, brought us to the
condition we have today: the exact questions and answers
to all exams are provided in study guides. That is to
say, Incentive Licensing didn't meet its goal of increasing
technical competence among hams; on the contrary, standards
were EASED with time because Incentive Licensing was not
practically implemented.

When the exact questions and answers are known beforehand,
we no longer have an exam. THAT's the reason why
there are those opposed to the exam structure as it
is today in the U.S. Today's exam structure has no
relation to Incentive Licensing, as originally defined.

922. Radio Control -- How to turn on something from 500 feet?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-16 00:00:00 UTC
From: mlipsky@effecteng.com
Message-ID: <4df66u$7sg@watt.electriciti.com>
Source record: 232113

I'm working on a project where I need to have a hand-held radio control gadget (like a garage door opener) that I can use to turn something on (an AC load) from a distance of 500 feet. It needs to be "secure" (i.e. resistant to people "accidentally" turning it on with their own garage door opener).

This is for a commercial application and is not that cost sensitive; I'm more concerned about security and reliability. I only need one so I would like to avoid re-inventing the wheel. Any ideas?

Thanks in advance.

Wait a minute...I thought that Saturns had a normal steel frame...maybe
even more of a frame than the typical unibody car, since it has to support
the plastic side panels.

My understanding was that the use of plastic is in the vertical body
panels; the trunk, hood and roof panels are still metal.

There is equipment like this which uses portable battery-powered remote control transmitters to switch the contactors of overhead electric cranes, the type that run along rails high up along the insides of factories and wharehouses. This frees the driver to do other chores, when nothing is being moved, without having to climb down a 40ft ladder each time. The manufacturer I recall was Telemotive which came from the mid-west, but there may be others. These are designed and built with industrial quality and are highly "secure" in your terms.

Make contact with crane or switch gear manufacturers for leads on this. If all else fails, a lawyer or paralegal could do a trademark search on "Telemotive" for you.

> Perhaps you weren't trying to imply that all who push for change
> are lazy, but I ask: How do you know *anyone* is lazy simply
> by observing them promote change? To help you out: You can't.

Agreed. But I never said otherwise, did I?

We seem to have gone off at a complete tangent here Todd, but that
always seems to happen when an emotive issue is discussed in Usenet.

What is it that you're actually trying to change, in what way are
you trying to change it, and why do you think it'll be better if
you succeed? Unless I've misunderstood (in which case please correct
me) you seem to want to set one technical standard, and reduce
(or do away with?) the morse requirement, in which case you'll end
up with a system of licensing more like the UK's.

Meanwhile, similar discussions in uk.radio.amateur seem to tend
towards agreement that we in the UK should look towards the US
system of licensing for examples of how to do it right.

If nothing else, it shows that the grass is greener on the other
side :-)

>Good luck on avoiding it!

>Terry/WB4FXD

15.750 KHz was the frequency when black and white TV was the
standard. When the NTSC standard for color was adopted, the
horizontal sweep frequency was changed to 15,734.264 Hz + or
- .044 Hz. The frequency is chosen to be 2/455 times the
chrominance subcarrier frequency which is 3,579,545 Hz + or
- 10 Hz. This relationship is required to minimize the
visibility of the color subcarrier when seen on the wide
bandwidth black and white receivers that existed before
color was introduced. It also helps modern receivers using
comb filter techniques to remove subcarrier induced
artifacts in the color picture while still allowing broad
bandwidth luminance signals through the receiver.

The tolerances quoted here apply to USA broadcast
transmission standards. Signals originating from consumer
VCR's and video cameras may vary. For further study, you
may want to consult the Reference Data for Radio Engineers.
In the fifth edition the information quoted here is in
Chapter 28 Broadcasting and Recording.

>
>The big question is why should hams get extra media coverage and turned into
>heros for doing the job the FCC has assigned us to do? I will refer you to
>the rules and regs, under the section that gives us our three purpouses for
>being in existance. As I recall the number one reason we are allocated
>frequencies, and given licenses is to provide emergency communications. By
>the act of becoming a ham you assume that role. It is very clear in black
>and white on paper. There is no question, these hams where simply doing the
>job. It's no big deal, the hams did the job just like the police, fire, and
>road services. Media coverage is reserved for hams that go above the norm.

No it is not, nor should it be. Media gives coverage to police and
firefighters *just doing their jobs* every day. And during events
like the snowstorm, they give coverage to the road crews, *just doing
their jobs*, too. News coverage is not just reserved for heroics. If
it were, there'd be darn little news to report. "Hero" is a much abused
term in our culture. You know that's true when someone like Capt. Scott
O'Grady, can be called a hero just for duck and covering while screaming
for rescue on his radio. News covers *events*, and the people working
those events just *doing their jobs*, are part of the story. They will
get coverage if they can catch the media's eye in relation to the story
the media is trying to tell.

>So I ask, what did these hams do that was above the norm? What makes them
>any better than say the camra man shooting the CNN viedo? The camra man was
>doing his job. The same can be said for doctors. They save lives every
>day, but that is their job. Take my job. I am a volenteer. I volenteered
>to defend the United States. So why should I get media coverage for doing my
>job? So saving lives by servicing the equipment that will keep aircraft
>flying is above the norm? Nope, thats my job.

And if you were part of the group shipped to Bosnia, you'd be on the
news too, complete with shots of your tearful mother and sweetheart
seeing you off. That's not because you're a hero, that's not because
you are doing something above and beyond the call of duty, that's just
because you're *doing your job* in relation to a newsworthy event.

In the proximate case, the *snowstorm* is the story, not the ham, not
the road worker, not the cop, but all of them are *part* of the story,
and can get coverage for what they are doing in relation to *the storm*.
That's the hook you use in selling your bit of the story to the media.
Puffy PR pieces about ham radio will be used by the news department to
line the cage of their pet vulture, but a good hook to what they are
covering can get you airtime or ink.

Now an *ethical* reporter (hard to find) won't let you write his story for him. He wants *leads*, times, places, names, that he can follow up to learn the story for himself. The more complete, organized, and accurate your information, the more likely he will be to follow up and write the story. Less ethical reporters will let you write the story for them, but it had better be written the way they would have written it if they weren't so lazy. Their name is going on it, not yours, so they want it to be good. (Don't make it too good, however, or their editor will never believe that they wrote it.)

For TV news, there'd better be some good photo ops, talking head stories are detested by news directors. They want action shots, blood on the streets, car chases, blazing buildings, crying widows, that sort of thing. Shots of hams in 4x4s braving the elements to get doctors and nurses to the hospital will work. Shots of shelters with a group of desperate people crowded around the radio trying to get word to their relatives that they're alive will work. A ham sitting warm and comfy in his easy chair in front of some rice boxes talking about amateur radio won't work unless it's a *very* slow news day.

News departments are under intense deadline pressure. The easier you can make their getting the story, the more likely they will give you the coverage. Accomodate *their* schedule, not yours, so that they can get that photo op when they can have a camera crew there. This may involve *staging* an event, but don't let your consience hurt too much over that, theirs won't. Remember news is "infotainment", with the primary emphasis on the "tainment" part.

>When you have outfits like Prodigy and AOL spamming mailboxes across the
>USA, not to mention including diskettes or CD-ROMs with magazines, offering
>Internet access to anyone and everyone, what can you expect?

>Jim - KF6CR

I dumped Prodigy because I got sick and tired of them using up all
of my connect time to place advertising, that I did not care to see, on
each page. I had a hard time getting rid of them too. I got charged for
two months after I cancelled. I got a nasty phone call from their
collection department threatening me with disconnection if I did not
pay up. I told them that is what I wanted in the first place and now they
don't bother with me.

I have been basically happy with Compuserve. I have been using them
since almost their beginning, but I wonder what it will take to make them
fix Wincim 2.0.1. Too many bugs and too slow!!

I have never used America Online. How are they, by the way?

This sounds like a GD-1. I think they had some variants identified
by suffix letters through GD-1B. Mine has the model printed in the
middle of the front panel near the legend for the switch on the bottom.

Mine still works well and is in regular use. 73 and good luck with
yours.

From: jimwills@ballistic.com
Message-ID: <4dh65e$sso@giga.bga.com>
Source record: 232133

FCC listen to us. The internet isn't broken so don't try to fix it.
If you want to kill something, TAX it.

I quote from the W5YI Report of January 15, 1996: "Be prepared for an internet "Access Tax." The FCC is said to be very concerned that users can bypass long distance companies to make calls through the use of internet telephone schemes. The FCC believes that at some point they will have to address the economic impact of Internet technology on the nation's telephone companies. Being considered is a flat tax fee levied on the number of users served by Internet Service Providers. Another suggestion has ISPs paying a fee based on the amount of Internet traffic passing through their systems. ISPs would pass along the extra cost to their customers."

We already pay tax on our phone bill, then another tax on the Internet service here in Texas. Will we permit this to happen? Write your Congressmen.

>nice if they cancelled it in Feb 96! Thanks .. Tom

Tom,
The FCC posts calls to the availability list after 2 years. I obtained my 610-v from W5YI who sells them for $1.00. His cost of repo is $.50 plus postage $.32 = $.82......thus he sells for $1.00. I purchased in bulk so I too sell them for $1.00. The FCC uses prison labor and todate has not released the form.

945. Finding power line noise source

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-16 00:00:00 UTC
From: tom_boza@ccm.ch.intel.com
Message-ID: <4dgo6p$lnf@chnews.ch.intel.com>
Source record: 232136

Im trying to track down an S-9 AC power line noise source Im having
on 40 meters. I pulled my home main AC breaker while my HF xcvr was on
battery, so I have eliminated the possibily that the noise is coming from
somewhere within my own house.

The noise is only there at night, so I suppect it must be some
security light that comes on in my neighborhood via a photo switch,
because right after sun up, the noise goes away.

I mounted a 12VDC battery and my IC-730 xcvr onto a handcart, and
connected the 730 to a two meter 3 ele yagi. Pulling the handcart,
I walked around the neighorhood pointing the yagi at all my nighbors
houses. Good thing it was at night, for my wife thinks I'm crasy
and she says that someone will call the cops because of some wack-o
in the neighborhood.

Anyway, I have found several "hot" noise spots the next block over,
however I can't pin-point the exact direction where the noise is coming
from. The two meter yagi is not directional on 40 meters no matter which
way I point it, for I might as well be using a vertical. What other type
of directonal antenna can I use to pin-point the location of the noise
source?

Once I can pin point the noise, how do I confront that
neighbor and tell them to turn off whatever so I can operate?
With my luck, Im most likely giving that neighbor TVI!!!
Now he/she will know its me!!!

The following is a QST

No-code Tech's grow in numbers once again, but few are upgrading.
Also, an Ohio ham is called a hero and a final tribute to one of the
nicest people ever to hold a call sign. Learn about the legacy left
by W6SP on Newsline report number 961 coming your way right now!

(*****
THE NO-CODE MAJORITY

Technician class operators and mainly code free Technician class
hams
now account for a little over 41% of all radio amateurs licensed by
the FCC and that figure is growing. The startling year end statistics
released by the government indicate that as of December 1st, 1995 the
number of Techs has risen to 289,483 of which 149,745 hold no-code
tickets.
Even more shocking are these numbers. From December of 1994 to
December of 1995 some 41,244 people joined the ranks of radio amateurs

with the majority -- 30,195 -- being no-code Techs.
And very few of the newcomers are bothering to upgrade. There were

about 129,500 Technician class hams who had passed a code test in the FCC's records in 1991 when the code free Technician was introduced. Now, almost five years later, there are only about 139,500 coded Techs.
In other words, in the five years since no-code licensing was introduced, only 10,000 or so no-coders have bothered to upgrade. The rest, about 150,000 no-code Techs appear to be very content to live out their ham radio lives on a local repeater using what the Amateur Radio supply industry has come to call a 2 meter ham station on a belt clip.
The latest FCC database shows a total of about 706,000 licensed hams
and an annual growth rate of about 8%. Even if you factor in a 2% dropout rate, by this time next year close to half the nations ham population will be Technician class operators. And if the trend continues, the majority of them will be code free hams who will probably remain codeless Tech's for their entire ham radio career.

(*****
OHIO HAM HERO

A member of the Dayton Amateur Radio Association has been honored as
a hero for saving the lives of five people in a burning building. While out on routine patrol last September 30th, Charlie Olson, KD8YR, spotted flames shooting through the roof of a home in West Milton, Ohio. He drove his police cruiser into the yard, turned on the siren and lights and then banged on the door to alert the residents inside. But Olson's bravery does not end there. He then went into the burning building to wake a deaf person who was sleeping on the couch.

West Milton Fire Chief Dennis Franz says that Olson's quick and professional response to the emergency saved many lives in the fire which did fifty-five thousand dollars worth of damage to the building.

(*****
EASTERN BLIZZARD

Amateur radio operators spent many bone-chilling hours helping their
community the weekend of January 7th. That's when a record shattering snowstorm pounded the eastern Seaboard, dumping nearly 3 feet of snow in some areas and killing at least 50 people. In Suffolk county, New York, hams worked closely with disaster officials to keep emergency services running smoothly.

With the prospect of a paralyzing winter storm about to hit... emergency management officials in Suffolk county, New York, waste no time. They place amateur radio operators on standby to provide

critical communications if needed. Andy Feldman, WB2FXN is Suffolk Co. RACES Radio Officer. Feldman is stationed at the RACES Radio Room in the county's office of emergency management. Feldman keys the mike to give fellow RACES members in the county a storm update.

"First of all let me give you a status report. As of the 5:00 PM briefing, the commissioner of fire rescue, there are 5 Humvey Ambulances that have been brought down to Suffolk Co. from the National Guard in Albany. Out of that," Feldman

Feldman is one of 251 radio amateurs in the county on standby to provide communications services.

"The county has got a 3-tier level of emergency notification. We got up to a level-2, which is pretty serious." Feldman

Under Level-2, radio amateurs must be at the office of emergency management. Suffolk county RACES members went into action using a telephone callup network.

"I had people that were keyed up to go to Red Cross shelters, as necessary. We had people ready to go to fire stations, if necessary. What ever was necessary, we would have been ready to go." Feldman

As it turns out, Suffolk county hams were not needed at the various

locations this time. Nonetheless, disaster officials count on radio amateurs as backup during emergencies.

"We were reporting weather, we were reporting weather conditions, storm conditions, from the towns up to the county level." Feldman

Suffolk county hams stayed in contact with radio amateurs activated

in two other nearby counties.

"The amateurs all did a superb job. I am proud of everyone of them.
In my service as well as in the adjourning county of Nassau. During this exercise, which was a multiple county event. All three counties had been in contact with each other, both on fire rescue, on the OEM side as well as the amateurs who were on stand by OEMs." Feldman

Suffolk county hams are experienced in handling disaster emergencies.
Despite the magnitude of the snowstorm, which prompted a declaration of a state of emergency, Feldman sez amateur operations ran smoothly.

"This was really a no brainer for the northeast. I was really surprised to see how well the emergency services handled everything." Feldman

Hams manned disaster offices in Suffolk county around the clock at one point, part of their continuing commitment to serve Suffolk county's 1.2 million residents.

The work Suffolk County New York radio amateurs did is just part of a
much bigger picture. Hams in many other parts of the Atlantic seaboard volunteered their time and communications services to help disaster officials cope with the storm.

(*****
NEW SECTION CELEBRATION

The ARRL has created a new Northern New York Section as of January 1st and section members are holding an inaugural Special Event on Jan 13th and 14th to celebrate.
From 00:01 UTC on January 13th thru 24:00 UTC on January 14th, section stations will be looking for you. The 12 counties in the new section are Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Jefferson, Lewis, Montgomery, Otsego, Schoharie and St. Lawrence. The information exchange will be your section and county. Contacts may be made on all amateur bands including repeaters, but not during nets. An award certificate will be sent to requesting stations who work 5

Northern New York stations. An endorsement will be added for those working amateurs in 5 counties of the 12 counties in the new section. An endorsement will also be added for those working the new section Section Manager, George Veraldo, WA2BAU.
To request a certificate and any endorsement, send an SASE with a copy of your log to George Veraldo, WB2BAU, General Delivery, Norwood, NY 13668.

(*****
DAYTON BANQUET SPEAKER

The Dayton Amateur Radio Association has announced that Dr. Paul Shuch, N6TX, will be the featured banquet speaker at Hamvention '96. Dr. Shuch is the executive director of the SETI League. SETI is an acronym for Search for Extraterrestrial Intelligence and the SETI League is a non profit group that was set up to fund this type of research. An article called Searching for Life Among the Stars appeared in the August 1995 issue of QST Magazine.
The Hamvention Banquet Committee is urging anyone interested in hearing Dr. Shuch to get their tickets early. There will be limited space this year due to other non Hamvention activities taking place at the same time at the Dayton Convention Center.

(*****
OSCAR 17 FAILS AGAIN

The DOVE OSCAR 17 satellite has failed again after a brief time back
on 2 meters broadcasting a holiday greeting. The latest failure occurred December 29 at 0500Z as the AMSAT DOVE team continued to reload the spacecraft's software in the wake of a failure December 3. AMSAT's Jim White, WD0E, of the DOVE team says the latest crash suggests a hardware problem aboard the spacecraft. The team had hoped

that reloading the satellite's software would fix the problem but it didn't. For those hams not aware, DOVE-OSCAR 17 is used for educational and research purposes.

(*****
GB2RS ADDS BROADCAST

The Radio Society of Great Britain has expanded its GB2RS ham radio

bulletin service. A new evening 70 centimeter service began on Sunday, January 7th from Portland in Dorset on channel European FM channel SU21.
The bulletin is transmitted at 19:30 local time from the station of

G1OCN, with G7OLW standing by as a reserve newsreader. Good coverage is expected of the south coast area, and reports - especially from UK novice class operators are welcome.

(*****
DARC AWARD

The German national amateur radio society, the Deutscher Amateur Radio Club, is looking for nominations for the prestigious Horkheimer Prize 1996. Named after Rudolf Horkheimer, one of the first radio amateurs in Germany, the prize is awarded for merits in amateur radio, its further development, and the targets of the DARC. The prize can be awarded to one or more persons or institutions. It is open to anyone who is a member of an IARU amateur radio society, such as the ARRL or RSGB.
The prize consists of an etched glass trophy which will be awarded at the "HamRadio 96" convention at Friedrichshafen in June. There is also a monetary prize for non-personal use, which must be spent for the promotion of amateur radio.
Nominations must be received by the DARC before January 31st and self-nominations are permitted.

(*****
INSTRUCTOR NOMINATIONS

Closer to home, nominations for the ARRL Instructor of the Year awards are due to Section Managers by January 31, 1996.
Each year, the ARRL Board of Directors selects recipients for each of four award categories. The Herb S. Brier Instructor of the Year Award which is co-sponsored by the Lake County, Indiana, Amateur Radio Club is presented to a nonpaid volunteer instructor. The ARRL Professional Instructor of the Year Award is presented to a paid, professional teacher. The ARRL Professional Educator of the Year Award is presented to a paid, but non certified, instructor. Finally, the ARRL Excellence in Recruiting Award is presented to someone who recruits more than teaches.
Check QST magazine for the name and address of the ARRL section manager serving your area.

(*****
DX

In DX, word from the South Orkney Islands, word that LU6UO and LU1ZPF will be active from Laurie Island through late February. QSL via LU6EF.

And VK0WH is now active from Macquarie Island and will be on there for the year. Operating frequencies are 3.570 and 14.130 MHZ on SSB and 7.010 MHZ CW.

Also, the DX NewsSheet says that OX3XR tries to be active every Wednesday on 1.825 MHZ between 22:00 and 23:00 UTC. Also, check 3.503 MHZ around 10:30 UTC and QSL via OZ3PZ.

Lastly on those XM7 calls recently heard from Canada. In this case

XM7 was assigned to VE7 for the period October the 28th to December 29th, 1995 as a special call in commemoration of 50th Anniversary of the United Nations.

(*****
COL. JOHN BROWNING, W6SP - S.K.

And finally, after a heroic three year battle with cancer, the man who strongly contributed to making current ham radio satellites a reality, Colonel John Browning, W6SP, died on January 3rd at Torrance Memorial Medical Center in California.
A decade ago John Browning had been AMSAT Chairman. His leadership

guided AMSAT North America into the Phase 3 era. He accomplished this while successfully steering an unruly group of strong willed techies and would-be techies to the same goal. Many may remember his column, "W6 Space Philosopher" in AMSAT's Orbit magazine.
Before taking the reins at AMSAT, Colonel Browning had a distinguished four decade military career. An avaitor shot down and highly decorated in World War II, he again saw action in the Korean conflict as a fighter pilot. Later he came to be known as "Colonel Electric" for his many space satellite program achievements including MILSTAR of which he is the acknowledged "father." When he retired from the Air Force in 1982, W6SP was awarded the Distinguished Service Medal. This is an honor usually reserved for senior General officers.
John Browning the ham radio operator then turned his attention to the Radio Amateur Satellite Corporation and brought to it his personal brand of inspired leadership. As its Board Chairman, he was able to give AMSAT a clear vision of the future during a transition period when AMSAT North America became one of a family of AMSAT organizations with a need to share program decisions on an international scale.
John Browning, W6SP, truly understood the new AMSAT realities long before anyone else based on similar scenarios he had experienced in his work with NATO satellite managers.
In the end, W6SP leaves behind a legacy in the sky. Ham radio satellites big and small that radio amateurs have come to rely on

almost in the same way as they do local repeaters. John Browning the manager and international diplomat paved the way for the engineers and scientists to build and launch these birds.
John Browning, W6SP is survived by his wife Myrnie, daughter Marilyn
and a brother. A memorial service was held on Monday, January 8th at the Neighborhood Church in Palos Verdes Estates California. Interment will be at Arlington National Cemetery on Tuesday, January 16 at 9 AM. In lieu of flowers, the family requests donations be made in John's memory to the:

Transitional Care Unit
Torrance Memorial Medical Center
c/o Healthcare Foundation
3330 Lomita Blvd
Torrance, California
90505-5073

Our sincere thanks to former AMSAT President Vern Riportella, WA2LQQ,
for his assistance in the preparation of this tribute to our longtime friend, John Browning, W6SP.
73 John.

HAPPY AND PROSPEROUS 1996.

What will the new year bring to Radio Amateurs in Canada? There are good indications that the present poor HF conditions will be improving as the year progresses. The conditions should be at the lowest ebb point by mid-year and then start improving as we run into 1997. Please, do not shoot the messenger, if the Sun does not cooperate, it is anybody's guess what will happen! The 40-metre band will continue to have some QRM from the broadcasting powerhouses, we cannot avoid this situation. What is a very interesting phenomenon is the broadcasting QRM originating from Europe that is now heard in the phone portion of the 80-metre band. These domestic broadcasts from Germany, France, United Kingdom and a few other countries will continue to be heard here during the winter months for many more years.

Looking at my crystal ball I can see that each and every one of the present RAC members will recruit one new member, and by the end of 1996 RAC will have in its membership 36% of all the Canadian amateur radio operators! And in 1997 we could then double this number again ... Perhaps an impossible dream, but even editors are permitted to dream in Technicolour!

It is quite possible that we will see in 1996, the start of the devolution of some of the tasks presently accomplished by Industry Canada to a new corporation under the aegis of RAC. As in any new venture, we will have to be patient as new procedures are developed by the new corporation to properly, effectively and efficiently discharge its mandate and serve the ham community in Canada.

In the next few months, we will be collating the results of the survey, initiated last month, on the distribution and the content of the RAC Monthly Bulletin. Some of the comments that have reached this desk are very informative and seem to represent a good cross-section of the present readership. Members are also using the survey to air their pet peeves about RAC and also, in some cases, against equipment manufacturers!

There is another symbol appearing in the hazy window of my crystal ball: it reads RCI. The fate of Radio Canada International will be decided in the next few months. What the outcome will be is difficult to predict but I know that many amateur radio operators have already written letters in support of RCI. I cannot comprehend why a country would decide to stop its international broadcasting at a time when it is important for all countries to show themselves to the outside world in the best light possible. Even the small emerging countries in Africa and Asia know this and promote themselves, their goods and their way of life using international broadcasting.

BULLETIN EDITORSHIP

There are some misconceptions about the editorial process of the bulletin and it is important to clarify who does what in the process, so that you can direct your fire at the right person.

The complete monthly Bulletin is prepared by Jacques VE3VIA. "He is solely responsible for the editorial content of the Bulletin", and from the comments received since September, it would appear that some editorials have created waves. That is one of the reasons why those editorials were written.

At the same time as the final hard copy of the Bulletin is sent to the "printer", a.k.a "the volunteer photocopying/mailing crew at RAC headquarters", an electronic version is sent to Steve VE3GRS for insertion on the following media: Packet, a large E-Mail mailing list and the various Internet Newsgroups. A copy of the same electronic version is sent to Neil VE3PUE for insertion in the RAC Homepage.

The RAC Bulletin is now appearing in unusual places around the world and through the Internet can be accessed via links back to the RAC Homepage from at least 20 to 30 various amateur or shortwave radio sites. The Bulletin is being read and comments are being received from readers around the world.

RAC Section Manager Election Results

Congratulations to John Avery VE9IW who was recently re-elected Maritimes-Newfoundland Section Manager for a two year term of office that will begin on April 01, 1996. John ran unopposed, eliminating the need for a balloted election.

VA3PM, NEW FIELD SERVICES MANAGER

The Board of Directors of Radio Amateurs of Canada is pleased to announce the appointment of Pierre Mainville, VA3PM as RAC Field Services Manager. He will take responsibility for RAC's Field Organization effective January 1, 1996. Pierre is an outstanding amateur and supporter of Amateur Radio. He was first licensed in 1972 and has served with distinction in many capacities over the years. He has served the Field Organization in both ARES and NTS since 1979 when he was appointed as an Assistant Emergency Coordinator, becoming Emergency Coordinator in 1981 and Section Emergency Coordinator in 1991. Pierre is an Assistant Director for RAC's Ontario South Region.

The Board expresses its deep appreciation to Alberta Regional Director Ken Oelke, VE6AFO, for his distinguished and tireless service on behalf of the Field Organization. As Field Services Manager, and in other capacities such as Section Manager for both CRRL and RAC, Ken's experience, skill, dedication and hard work has been a major contribution to the stability and continuity of the Field Organization.

CORRECTION

In the November issue of the Bulletin, it was reported in the "Election Results" that only 44% of the eligible ballots had been returned in the Alberta/NWT election, in fact 59% of the eligible ballots had been returned. (Operator finger trouble!) It is still a very poor showing for a democratic society.

RFI HANDBOOK

The FCC Interference Handbook is now available on the Internet. The 22 page booklet, available from the Compliance and Information Bureau via the FCC World Wide Web home page, includes the same information and illustrations contained in the recently published Interference to Home Electronic Entertainment Equipment Handbook. It includes information about equipment installation, identifying interference sources, curing interference problems, and filters. It also contains a list of home electronic equipment manufacturers and telephone numbers. Pictures illustrate different TV interference problems, including ham or CB transmitter interference. The Interference Handbook is available on the World Wide Web at:

http://www.fcc.gov/Bureaus/Compliance/WWW/tvibook.html

(Ed. note: most of the addresses listed in the book are for the USA manufacturers but at least it is a starting point.)

"SKYRIDER" TNC CONTROL PROGRAM

Are you looking for a TNC control program that will operate well under the Windows environment? Well, get a copy and try SkyRider written by Bob Rushby VE3GLA. This software, written to simplify the use of the MFJ 1278 family of TNC, was reviewed in the December edition of CQ by W8FX and Karl had some very good comments on this shareware program.

NEW NORTH AMERICAN NETWORK

VE3HHS/W4 is initiating a North American Network (NAN) to operate as an informal net for establishing communications with other amateurs or passing traffic. He plans to operate on the following frequencies and times:

Frequency (MHz) Time

3.760 06:00-07:00 EST (11:00-12:00 UTC)
7.160 07:00-08:00 EST (12:00-13:00 UTC)
14.160 08:00-09:00 EST (13:00-14:00 UTC)

All amateurs are invited to drop in to the NAN.

HIGHEST REPEATERS (AGAIN!)

The provincial honour is at stake here: BC vs Alberta! I have been sworn to secrecy, but it would appear that someone is getting ready to set up a new VHF repeater in the Rockies that will top anything in existence in Canada. Stay tuned!

I am expecting to hear about a repeater mounted on a balloon that will circle the globe but spend more time over Canada. I have wrongly interchanged the words altitude and height, this new repeater would be at an ALTITUDE much higher than anything we have seen so far. I would love to see the coverage maps of these repeaters! For those on packet and on E-Mail who have requested the locations of the 2 highest, I will reproduce below what has been sent to me by two different sources in the same city.

VE6HWY on 147.33+ is located on Protection Mountain and is said to be at an altitude of 3041 metres/9975 feet.

VE7KNP is located on the shoulder of Mt. Isabella at an altitude of 2971.19 metres/9748 feet.

Once again the Editor is completely neutral and only reports what is sent to him from the authorized sources.

C & E Museum, CFB Kingston

Work on the new Canadian Forces Communications and Electronics Museum is continuing at a brisk pace. The building was handed over from the contractor in early November 95 and much of the research collection has already been moved. Next to move will be the old displays and at the same time many new displays are being built. As well as showing the chronological history of the C&E Branch, the museum will show the development of various technologies. The centre piece of the "Radio Technology" area will be the VE3RCS club station with 1945 vintage equipment (W.S. No. 19, High Power), 1970's vintage equipment (Heath HW-101 & SB-220 station) and 1995 vintage equipment (Kenwood TS-450 station). The intent is to have all three stations fully operational.

This $5 million project is funded largely by donations from C&E Branch members and corporate sponsors. Some grants have also been received from municipal, provincial and federal governments. The grand opening is scheduled for 17 May 1996. For further information contact VE3RCS @ VE3CDY.#EON.ON.CAN.NA

JAWS/HAWS

"I am helping Dennis Stossel with research he is doing on the story of the Joint Arctic Weather Stations (JAWS) which became the High Arctic Weather Stations (HAWS) when the United States withdrew in 1971/72. Their 50th Anniversary is coming up in 1997, and there's a move to have a reunion at Resolute Bay of JAWS/HAWS polar veterans if there's enough interest. We are trying to gather information about Canadians and Americans who worked at the JAWS in Eureka, Resolute Bay, Isachsen, Mould Bay and Alert, especially in 1947-1951. We are interested in names, dates and anecdotes.

"Dennis and the group working with him in Winnipeg are ex DOE managers, and will cover the meteorological and scientific aspects. I would like to be able to help them out with the radio side of things, particularly the amateur aspects. Amateur radio played a big part in the lives of those living on the stations. Charlie Harris, VE6HM, Brit Fader VE1FQ, Stan Surber W9NZZ and Fred Bissette VE3AIU were among the best known in my time in the North.

"Many commercial operators were, like myself, active amateurs. I would like to be able to add a few facts about the amateur radio operations. When did the first amateur contact take place? How was the VE8MA, MB, MC series chosen? What kind of equipment was used? What services did amateur radio provide?: etc.

"I would be grateful if you would bring this to the attention of any amateurs who may have been at the stations who might be able to help with information, as well as other amateurs who (like those mentioned above) maintained close ties with the stations.

"Any information would be welcomed. I can be contacted, preferably by Internet at:
jgilbert@fox.nstn.ca or alternatively by phone (613)724-1266 or Fax (613) 724-3783 or by mail at 714 Highland Avenue, Ottawa, Ontario. K2A 2K7"

I have been very happy with the Hamtronics REP-200 repeater. We have one in a commercial site with about 30 other transmitters and with a good 6 cavity reject duplexer and an extra pass cavity on the receiver it performs very well with little or no received interference. It contains a good controller with autopatch and a couple of other remote control functions. It is easily re-configured over the air with DTMF. Our site is at 1300 feet amsl and is a walk-in with snowshoes for 3 to 6 months of the year. The repeater has never given any trouble whatsoever. It is on 146.28/88 with carrier squelch. It's also very tiny. Don't scrimp on the duplexer and antenna. We bought top of the line commercial stuff.

A good surplus radio for conversion to a repeater is the General Electric Custom MVP mobile. It's essentially the same circuitry as their big MASTR II repeater. A minor wiring modification on the audio-squelch board and viola! a duplex radio. Add a controller and you have a repeater. Actually, they even sold a version of this that ran 5 watts AS A repeater. The normal mobile is 25 watts. I recently saw these on the used market for less than $200 each. You need to send the channel elements to International or other crystal company and they will re-crystal the element to your frequency for a few bucks. I've converted a few to the 440 band with no problems, just re-tune. I haven't tried it on 146. If the front-end helical resonator won't re-tune, it can be difficult to modify. The transmitter shouldn't be much problem.

Good luck,
Regards, j0e WL7AML

My own experience with AOL has been pretty dismal. I've joined it 3 times
over the years, once when it first started and twice since. Each time I
dumped it at the end of the trial period. The first time was because they
really didn't have much of anything in terms of files and other info. The
other two times were both because I had trouble logging on. In both cases
they'd just spammed the world with diskettes and had more new members
than their system could handle, and people could not get connected to the
system after their local number answered. I didn't see the point in paying
to join a service I couldn't connect to. The fact that AOL did not have
(and still doesn't have) a node faster than 2400 baud in my city was also
a contributing factor. I've talked to a number of other folks in different
places who had the same connect-time woes with them that I've had who
also dumped them for the same reason.

well, since CIS will be going 100% HMI only in the near future, you'll have to get used to CIM (assuming that they don't do something to screw up the "competition" that would also supply access software to CIS...).

of course, the os/2 version I have seems to be OK so far...but i tend to use tapcis for forum mongering...for BBS type of stuff, GEnie is still the best for that in terms of organization (amazingly similar to a newsgroup in a very general sort of way.)

The reason no has pointed it out is because that statement is untrue,
and has been hashed out in this group many times before. Morse code is really
On-Off Keying with a Morse encoding of simple text. With this in mind we
take the OOK by itself, since the Morse encoding does not offer much gain
compared to standard encodings(The ability of operators to pull meaning out of
a corrupted message is contextual gain, which is independent of how the
message was sent).
With OOK by itself we can actually look at the error rate vs S/N. It
turns out the OOK has the same error rate as non coherent BFSK for the same
S/N (see Sklar's "Digital Communictaion"). With NCBFSK being the eclipsed
by M-ary cohereht FSK in this respect, we can see the OOK is not the most
robust mode. Add in time diversity and coding gain and OOK Morse code is
not as good as NCBFSK.
Sure it can be argued that CW OOK has the simplest equipment, but
coherently detected BFSK isn't all that hard, and it can be made very
robust.

you got it...nothing more to say...i think the memory aid folks have
problems when things are simple enough to not need something like
an "Eli the Ice Man" or "Power is easy as PIE" approach to stuff.
it just is. no good reason or clever planning. probably picked for the
"sing-songiness" of the prosign.

>> One more thing, what about DX, is it just an abreviation
>> for Distance...???

also the same here. DX - just an abbreviation -- initially radio didn't have
very good range. this was due to a combination of frequency used, transmitter
and receiver design. distance was everything. consequently, it got a short
abbreviation. tx for transmitter and rx for receiver also exist.

>CQ: Seek you... that is the true story.
> Nom Philippe Maynard Real Name

well, maybe. got any source references (like about 75-90 years old) to
substantiate it?

VK2 Divisional meeting

Divisional Council meeting

The next Council meeting of the Wireless Institute of Australia (NSW Division) will be held at 109 Wigram St., Parramatta NEXT FRIDAY.

All members are welcome.

Divisional news

Divisional news

Country members can now send news items for the Sunday broadcast via VK2MJ bbs on 40 metres.

The frequency used is 7.035 and is operating 24 hrs. Mail can be sent to NEWS @ VK2WI. Packet mail can also be sent to the WIA by sending mail to WIA @ VK2WI or to the councillor of your choice.

Country amateurs, whether they are members or not, are welcome to use the VK2MJ bbs at any time and make use of its facilities which include tcp/ip and ax25 ports.

de Mike Walton VK2MJ

Great Lakes repeater

VK2RGL frequency change

The Great Lakes Radio Club wishes to advise that, from Saturday, 16th December 1995, the 2-metre voice repeater, VK2RGL, on Cabbage Tree Mountain, 40 kilometres west of Forster, on the NSW Mid North Coast, has changed frequency from 147.375 MHz to 147.1 MHz (input frequency 147.7 MHz).

This change has been made because of recurring pager interference on the former input frequency, 147.975 MHz, which has continued throughout most of the repeater's existence despite the best efforts of the SMA office at Newcastle to eliminate it. The work has been carried out quickly and effectively, primarily due to the efforts of club-member Daryl, VK2MZ.

It is anticipated that mobile users will now be able to enjoy pager-free communication from south of Newcastle to the outskirts of Port Macquarie without having to change repeaters. It will also be possible frequently to work many Sydney stations via this

repeater. Both fixed and mobile stations are invited to enjoy this facility and to join in our club nets, which are conducted on the repeater each Thursday evening at 7.30 pm. Reports as to our coverage would be most welcome.

Stan Ellis, VK2DDL
President

Federal news: B'casters on HF bands

Pressure from broadcasters on HF bands

Shortwave broadcasters are making a concerted push for more spectrum in the high frequency bands. This issue emerged at the recent World Radio Conference, WRC-95, held by the International Telecommunications Union (ITU) in Geneva.

While this move could not be dealt with at this Conference, it may affect the Amateur Radio Service in years to come as it will be on the agenda for the 1999 Conference, according to the WIA's delegate to WRC-95, David Wardlaw VK3ADW.

Shortwave broadcasters are seeking access to new HF bands which were allocated in 1979 at WARC-79, and a further lot in 1992 at WRC-92, the latter for single sideband reduced carrier (SSRC) transmissions. This mode of transmission provides more efficient use of spectrum, but requires a more advanced method of reception than simple AM detection, now universally used. Solid-state technology now allows synchronous detection methods to be incorporated in new HF receivers, and modern mass manufacturing methods would make the technology comparatively inexpensive, in time.

The next World Radio Conference in 1997 (WRC-97) may consider some recommendations on the issue, which is likely to be on the agenda of the 1999 Conference. At WRC-99, it is anticipated that bands near 4 MHz up to about 10 MHz particularly will be considered. Fixed and land mobile services have world-wide primary allocations in this part of the spectrum, adjacent to primary broadcasting service allocations. As the demand for fixed and land mobile services is declining over time, this may relieve possible pressure on the HF amateur bands in the 4-10 MHz region.

The situation is being monitored by the WIA's ITU Study Group and Conference Co-ordinator, David Wardlaw VK3ADW, who was a member of the official Australian delegation to WRC-95.

In the meantime, shortwave broadcasters are already taking up more spectrum by moving into some HF amateur bands. From Australia, broadcasters are found in the exclusive 40 metre band allocation. They can be heard on 7010, 7070, 7085, and 7098 kHz, as well as two broadcasters near the 7100 kHz band edge whose sidebands spill into our exclusive band.

WIA Federal Intruder Watch Co-Ordinator, Gordon Loveday VK4KAL, said that 40m continues to be a "happy band" for intruders. They must be stopped, Gordon said, and he urges radio amateurs to protest by sending observer reports. If we don't put up a tough fight for our 40m band, the shortwave broadcasters will have a stronger argument for more spectrum at a future World Radio Conference.

Intruder Watch activities pay off. In 1994, reports from Radio Society of Great Britain (RSGB) observers were instrumental in having an interfering harmonic of a Russian shortwave broadcaster removed from the exclusive 14 MHz amateur band, along with a French military station on Reunion Island in the Indian Ocean. If you'd like to help Intruder Watch, even on a casual basis, contact Gordon Loveday VK4KAL via his Call Book address.

Federal news: EMC standards

EMC Standards Compliance deadline, 1 January

The deadline for electrical, electronic, telecommunications and information technology equipment to meet set-down standards is upon us. From 1 January 1996, equipment which has to comply with Australian Standards covering RF emissions and RF immunity will have to begin carrying a special "CE" label to indicate compliance with the standards.

The EMC compliance regime parallels similar action in Europe, where it now acts as a "non-tariff" trade barrier to the importance of non-complying equipment. All equipment required to comply with the European standard, whether manufactured there or imported, now has to carry a special EMC "C" label.

The lack of mandatory Australian immunity standards had, in recent years, left the door open for television receivers to be imported, which are susceptible to interference from other signals, whether these arise from legitimate transmissions or unwanted electromagnetic pollution. Similarly, other items of equipment which generate electromagnetic pollution, or were susceptible to RF interference, had also appeared on the market in Australia.

There were concerns expressed by the Australian electronics ans electrical industry hat, with the announcement of the EMC compliance regime several years ago, Australia may become a dumping ground before EMC compliance took effect. However, few examples had been identified.

The current Australian Standards on emission compliance are on household electrical appliances, portable tools and similar electrical apparatus; sound and television broadcast receivers and associated equipment; industrial, scientific and medical radio frequency equipment; vehicles, motor boats and spark ignited

engine-driven devices; information technology equipment; electrical lighting and similar equipment; microwave ovens for reference above 1 GHz.

Specific information on relevant Australian Standard numbers can be obtained from the appropriate government department. They can also be found in January AR magazine.

Ross Hull contest addendum

Ross Hull contest rules addendum

Please note the following correction to the date: Wednesday 27 December 95 to Saturday 27 January (UTC).

Scoring question

In answer to a reader's query about 6m scoring, the reference to "2 points per 1000 km or part thereof" applies only to distances over 1000 km. QSOs on 6m below 1000 km retain their higher point value. e.g. for 900-999 km, 6m QSOs are worth 10 points.

from Federal WIA office.

VK2 WICEN news

WICEN News

This is a reminder that the now internationally-famous WICEN (NSW) Web page is located underneath the WIA (New South Wales) Divisional Web page, as "http://sydney.dialix.oz.au/~wiansw/wicen/". Please note that it is "still under construction", but links to pages of interest to WICEN personnel are constantly being added. A feature soon to be added (and which may already be in place by now, if the WICEN (NSW) "Webmaster" can get his act together) is a "Guest Book" and other interactive features, such as the ability to request further information. Naturally, this will be extended, so that joining WICEN will be no more than a mouse-click away; it is expected that the VK2 Division itself will soon implement these features, again making New South Wales the technology leader, so perhaps those bodies still using telephone BBSs may like to take note of the benefits provided by the Internet.

The WICEN calendar already has several events upon it. As far as we know, the only event this month is the Management Committee meeting on Saturday the 20th, at the usual place and time. The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is on 25th February, and since we will not have the caravan this time, then your ideas are requested; please let the Publicity Officer, Dave VK2KFU, know whether you can assist.

The famous Bungonia Cave Rescue event rears its head again, over the weekend of 16-17th March, and Mark VK2XGK would like to hear from those wishing to demonstrate their communications skills, under somewhat difficult circumstances, before an adoring audience (we don't tell them about the repeater on the hill!); the potential for publicity here, before various emergency services and the public, should not be overlooked. On the same weekend, on 17th March, is the Red Cross Calling Doorknock Appeal, with Andy VK2XRX in charge.

Finally, there are the two big annual events; the City to Surf Fun Run is on 11th August, and the Hawkesbury Classic Paddle, once more missing JOTA which is the weekend before, is on 26-27th October.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

If there are any other regular nets then we'd like to hear about them.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the January issues of the various magazines.

"Electronics Australia" covers Australian expertise in various technologies; the SMA monitoring station in Quoin Ridge, Tasmania, receives a visit; simple op-amp circuits, including Pulse-Width Modulation, are discussed; a simple PC-driven exhaust analyser is commenced; WICEN members will find a dual battery controller of interest; an equivalent series resistance meter will be of use to those who service equipment; a servo-driven remote volume control is completed; we are told that Divisional Councillor Peter Jensen VK2AQJ won an award for his book on Marconi; and PC-fiddlers can build a "Power On Self Test" card.

"Silicon Chip" builds a swipe card reader which could be used as an electronic lock; a new column, "Satellite Watch", discusses what can be found on satellite television; those with a horticultural bent can build a microprocessor-controlled sprinkler controller; model railway enthusiasts can build an infrared remote controller; and vintage radios are converted from anode-bend to diode detection.

"Amateur Radio" builds a compact magnetic loop in a lunchbox; a 20m ground-plane antenna is constructed; those who still home-brew and use CW can make a 40m transmitter; antennas on yachts are discussed; the Annual Index appears; and the contradictions inherent in the new repeater regulations are pointed out.

"Radio and Communications" gives the Morse hobby-horse another beating; a simple discone for VHF/UHF is built from cardboard, aluminium foil, and "Blu-Tack"; some fundamental concepts of packet radio are explained; and a fast nicad charger is constructed.

And in something that may be of interest, the current issue of "Australian Video Camera" features: international Video/TV and mains power standards; video editing on a PC; and a list of Australian camcorder clubs. The December issue reviewed the first digital camcorder for domestic use; looks at the new digital video recording standard, and video equipment communication protocols. We thank Richard VK2SKY for that last item.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

NEWS BRIEFS

An Australian company, MobileTrack, has turned swords into ploughshares, putting the US Department of Defence's NavStar Global Positioning System to use in an automobile.

The MobileTrack system can give report the position of a stolen car to within five metres, and can even be instructed to disable the car's engine, from the MobileTrack control centre at Parramatta.

Police in several states, and in New Zealand, have reportedly used the system for covert surveillance operations. A tobacco wholesaler, who usually suffers a vehicle theft at least once a year, with the loss of up to $50,000 worth of stock, is using it to prevent further losses.

*****

A team of four riders, two Australians and two Japanese, tested their solar bicycle on a 3,000 km run from Darwin to Adelaide recently, in

preparation for the 1996 World Solar Challenge in October.

The World Solar Challenge, held in Australia every two years, was won in 1994 by Honda, who spent $10 million on their entry, as part of their electric car development program.

The Challenge is organised by Mr. Hans Tholstrup, who in 1982 was the first person to drive from Perth to Sydney using solar power. Mr. Tholstrup said that the best thing about the World Solar Challenge was that anyone could afford to enter it; while some teams were spending millions of dollars on their solar vehicles, schools and individuals were able to develop solar bicycles for as little as $2,000.

Meanwhile, students at Adelaide's Prince Alfred College have set a world record for the longest journey by a solar-powered boat, travelling 2,112 km along the Murray River. Not satisfied with that effort, they have been preparing to break their own record.

SOLAR ACTIVITY WAS LOW ON 5TH JANUARY, AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 7TH TO 10TH JANUARY, AND QUIET TO UNSETTLED ON 5TH TO 6TH, AND 11TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH ENHANCEMENTS TO 20 PER CENT ON 5TH AND 8TH, AND TO 30 PER CENT ON 6TH. SPORADIC E WAS OBSERVED ON 5TH AND 9TH JANUARY, AND SPREAD F WAS NOTED ON 7TH.

FORECAST (12 JANUARY - 18 JANUARY)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED
CHANCE FOR ACTIVE PERIODS ON 12 AND 18 JANUARY

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Veterans group

The next meeting of the Veterans Group at Amateur Radio House will be on Thursday February 15th 1996 from 1100 hrs to 1400 hrs and thereafter on the third Thursday of each month.

No meeting is organised for this month January.

Season's Greeting to all

submitted by Franklyn Pain VK2DYP

Club news: Waverley

The Waverley Amateur Radio Society is starting 1996 with plans for an excellent program of events and meetings. Remember that our regular meetings occur on the third Wednesday of every month, with the first for the year being this coming for the year incorporates the activites YOU want.

The meeting will also feature a talk by Raffy Shammay, VK2LRF, on choosing a commercial vertical H/F antenna and, if time permits, the second part of Rod Torrington's fascinating reminiscences on ham radio in the 1930s.

Meetings are held at the clubhouse in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. where a number of members gather for pre-meeting refreshments. Starting time is 7:30 p.m., but doors open at 7 p.m.

It is planned to hold both Morse and theory classes this year for prospective amateurs and those wishing to upgrade their licences. Theory classes will run on one night a week over a 21 week period. Classes are open to both members and non-members, so if you are interested, please contact Raffy, VK2LRF, on 389-9188.

Simon Buxton - VK2EII - Publicity Officer

Club news: Tamworth

The next meeting of the Tamworth Radio Club will be held in the soccer rooms, Jewery Street Tamworth, commencing at seven thirty on February 2nd. Visitors are most welcome, tea and coffee is provided.

Our guest speaker this month is Terry VK2KDK who will speak on "Handy hints for when putting together kits". Terry has put many kits together (and even finished one or two), so his tips will be most valuable.

Tamworth Radio Club will be hosting the February New South Wales WIA Council meeting and we look forward to meeting visitors to our town.

959. Re: Communications Procedures // CQ on VHF

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-17 00:00:00 UTC
From: wdr@world.std.com
Message-ID: <DLC3Jw.HK5@world.std.com>
Source record: 232020
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Gary's usually right, but I'm going to stick my neck out on one
minor point.

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:
> believe many people only object to its use on repeaters, where it is
^^^ CQ long call
> redundant. Simply keying up and speaking your call sign is sufficient
> to alert all others monitoring the repeater to your presence and your
> willingness to talk. Anything more is excess, unnecessary, and a mark
> of poor operating procedure on a limited resource.

For a call into a machine with a QSO going on or otherwise expected to be
hoping with activity at that time, exactly.

For a directed net, follow instructions to avoid doubling.

For other situations where "limited resource" may not be as applicable
as at peak time, other procedures might apply.

In an urban environment with multiple repeaters at off-peak hours,
where getting a call-back on any particular machine is chancy,
where some of us use either an auxiliary scanner or the scan-modes of a
appliance transceiver to monitor several machines simultaneously,
it can be useful to say
"WA1BCD monitoring on .23"
if no-one answered your first call,
or even on the first call if it's a really slow time.

I've heard "WA1BCD monitoring" on the scanner and by the time I could
get a hand from the steering wheel to the scanner [light] button it was
gone, so I couldn't get back to him -- I didn't know which machine he'd
keyed up, so I didn't know where to QSY the 2m rig to.
(I may open up the delay AND rig the light to be on whenever the
scanner is on external power, but it'd still be safer driving if I
didn't have to look -- I can usually QSY by touch.)

The other thing that helps both with a linked network of repeaters and
with scan-mode is pausing or saying "this is" between key-up and the
callsign; it may take a half second for all the links to come up or for
my scanner to wrap around to your frequency. This is bad form during
peak usage periods, of course, when it IS a scarce resource. Off peak
in this vicinity, vacant 2m repeaters are hardly scarce. (Lots of
folks monitoring who'll answer their friends, and lots of
"<callsign> monitoring" but not many QSOs.)

[NOTE: I've clipped the newsgroups to just r.r.a.m/r.r.a.p, since it's NOT CB or scanner related. Not sure it's really policy related either, unless the fellow suggesting teaching manners to us uncouth code-free VHF+ vermin was suggesting the FCC should do it. From the sound of the 2m rptrs up here in 1-land, there's no correlation between good/bad operators and callsign class. I've even heard good 2m operations from 2x1's. :-)]

960. Shuttle Repeater Freqs in NC?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-17 00:00:00 UTC
From: luvautm@vnet.net
Message-ID: <luvautm.89.30FC4084@vnet.net>
Source record: 232021

Hi All!
Does anyone have or can point me to where I can find the repeater freq. in the Charlotte, NC area on which I can listen to shuttle audio rebroadcast on my scanner? Any info will be greatly appreciated.
Also, hopefully by the end of next month I will be ready to test for my Tech-Plus license. Can anyone recommend a good mobile rig for a beginner in the $300.00 range(new or used). It must have autopatch capability and can I find a dual-bander in this price range? Also, what are some of the better mobile antennas out there?
Thanks very much in advance!
James

Source record: 232022

The East Pasco Amateur Radio Society in Dade City, Florida operates a web site located at http:home.aol.com/epars88.

In addition to the Web Page, EPARS operates and maintains a wide coverage 2 meter repeater on 148.880- and a packet BBS on 144.930. You can access the packet BBS via ROSE on 144.930 by typing "c aa4ru v aa4ru-7,904567" or you can connect direct with "c aa4ru". For LL lovers the BBS can also be accessed at 904-567-0088 at all speeds from 300 to 14.4 BPS. The BBS contains several files for downloading and packet forwarding for licensed amateurs.

Dade City with a population of 6,000, is located 35 miles north of Tampa and is home to World Tennis Champion Jim Courier.

ARLB004 FCC shrinks backlog

The Federal Communications Commission reports it is making good
progress on processing a backlog of more than 2800 ham radio license
applications filed electronically, including almost 2000 from ARRL.
The commission was back on the job again January 16, in the wake of
a month-long shutdown begun by the budget impasse and extended by
bad weather and a Federal holiday after the commission first
reopened for a day January 11.

A spokesman said the FCC expects to be up to date with
electronically filed applications for new and updated licenses by
Thursday, January 18. The furlough and the snow days have delayed
implementation of the vanity call sign program, however.

New and upgraded license information is available from ARRL by
calling 860-594-0300. Applicants also can check the University of
Arkansas at Little Rock FCC database at
http://www.ualr.edu/doc/hamualr/callsign/html

VK2SG RTTY DX NOTES FOR WEEKENDING 5 JAN 96 (BID RTDX0105)

We are deeply grieved to have to inform you of the recent loss of a very well known and admired friend by many. The founder of the RTTY bulletin, Syd, VK2SG. Angelo, W5KSI received a phone call from Bill, VK2EG, Syd's close friend, who gave him the sad news. Syd E. Molen, VK2SG, 76 years old, on Friday December 29th., became a silent key due to a heart attack. Syd along with Bill, VK2EG was co-founder of the Australian National Amateur Radio Teleprinter Society (ANARTS) in the early 70's. They subsequently started the RTTY DX Notes, which was renamed the VK2SG RTTY DX Notes in 1993 when Syd had to relinquish his efforts to others due to poor health. We will always have a spot in our hearts for Syd. God Bless and keep him forever more.

Our information this week came from: DJ3IW and the Central Europe Cluster DB0SPC, I5FLN and the IK5PWJ Packet Cluster, OH2BUA, PP2ZDX, VK2EG, W2JGR and the NJ0M node the Twin-Cities DX Packet Cluster, W5KSI and ZS5S. Thank you all for your assistance.

NOTES OF INTEREST:

Pratas Island, BV9P. As stated in last weeks RTTY bulletin, Pratas is now considered a new country. QSL cards will be accepted starting April 1st and because of QSLing irregularities, it will be necessary for anyone that has the picture card from January or March 1994 operation to have it replaced by a card from QSL manager KU9C. The picture card will not be acceptable for credit.

THE VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, and digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL, at W5KSI.#NLA.LA.USA.NA

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NLA.LA.USA.NA

COMING EVENTS

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

17TH-18TH DARC HF RTTY PART 1

MARCH 16TH-17TH BARTG SPRING RTTY CONTEST

APRIL 6TH-7TH EA WW RTTY CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA
at VK2WI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2WI.
Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or
patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We are looking for-
ward to news from your areas to let other amateurs know what
you are doing in the hobby. Hope to hear from you.

I have the impression (not sure where I got it) that "CQ" originally was a
military-sounding "Call to Quarters."

(Yes, sent out of order...)

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 890 7th January 1996

ANARTS CO-FOUNDER, SYD VK2SG, SILENT KEY

IT IS WITH DEEP REGRET WE ANNOUNCE THE PASSING OF SYD MOLEN, VK2SG, CO-FOUNDER OF ANARTS WITH BILL STORER, VK2EG AND OTHERS. SYD SUCCUMBED TO A HEART ATTACK ON THE MORNING OF FRIDAY 29TH DECEMBER 1995.

REPRINTED BELOW IS THE EULOGY GIVEN BY BILL, VK2EG, AT HIS FUNERAL ON WEDNESDAY 3RD JANUARY 1996.

SYD WAS ALWAYS INTERESTED IN RADIO AND ELECTRONICS. HE WAS AN AVID SHORT WAVE LISTENER IN HIS TEENAGE YEARS.

EVEN IN HIS SCHOOL DAYS, I HAVE BEEN TOLD THAT HE HAD BITS AND PIECES OF CRYSTAL SETS HIDDEN IN HIS DESK.

IN 1939 HE JOINED THE RAAF AND SERVED THROUGHOUT THE HOSTILITIES ON HUDSON AND DC3 AIRCRAFT IN THE OPERATIONAL PACIFIC THEATRE OF WAR, AS WELL AS AN INSTRUCTOR IN THE FIELD OF ELECTRONICS.

IT WAS DURING HIS WAR SERVICE THAT HE MET AND MARRIED JEAN.

AFTER HIS DISCHARGE FROM THE AIRFORCE IN 1945 HE BECAME INVOLVED WITH THE ROYAL FLYING DOCTOR SERVICE AS ONE OF THEIR LEADING MOBILE TECHNICIANS IN THE FAR OUTBACK OF QUEENSLAND AND THE NORTHERN TERRITORY.

IT WAS DURING THIS TIME THAT HE BECAME A LICENSED AMATEUR WITH THE CALLSIGN OF VK4SE.

AFTER LEAVING THE ROYAL FLYING DOCTOR SERVICE, HE OBTAINED HIS BROADCAST CERTIFICATE AND WAS EMPLOYED WITH VARIOUS BROADCAST STATIONS AND ENDED UP WITH 2UW IN SYDNEY. HE THEN TOOK OUT HIS CURRENT CALL VK2SG.

FROM HERE HE BROADENED HIS HORIZONS BY ASSISTING WITH THE PLANNING AND EVENTUAL OPENING OF CHANNEL 10 TELEVISION STUDIOS. HE SERVED IN THEIR STUDIO AND EVENTUALLY THE TRANSMITTING FACILITIES.

HE EVENTUALLY RETIRED FROM CHANNEL 10 AROUND 1980.

ALL THROUGH THESE YEARS HE WAS AN ACTIVE AMATEUR, GAINING DIFFERENT AWARDS FOR DIFFERENT FIELDS OF COMMUNICATIONS, AND STILL CONTINUED EXPERIMENTING WITH DIFFERENT ASPECTS OF HIS HOBBY.

IN 1970 SYD WAS RESPONSIBLE FOR THE SAFE COMPLETION OF THE FIRST 8600-MILE VOYAGE OF THE RAFT - LA BALSA - ACROSS THE PACIFIC FROM SOUTH AMERICA TO AUSTRALIA. THE RAFT'S RADIO EQUIPMENT MALFUNCTIONED APPROACHING AUSTRALIA AND IT WAS WITH SYD'S TECHNICAL KNOWLEDGE AND DEDICATION THAT ENABLED THEM TO MAKE THEIR SUCCESSFUL LANDFALL.

IT WAS DURING THE LAST 15 YEARS THAT HE BECAME INTERESTED IN DIGITAL METHODS OF COMMUNICATION AND WAS IN THE FOREFRONT OF ALL DEVELOPMENTS OF THESE NEW MODES. MUCH OF THE ORIGINAL EQUIPMENT THAT WAS USED WAS SURPLUS DISPOSALS AND SYD, WITH HIS KNOWLEDGE AND EXPERTISE, DEVELOPED NEW IDEAS.

HE WAS ONE OF THE FOUNDATION MEMBERS OF THE AUSTRALIAN NATIONAL AMATEUR RADIO TELEPRINTER SOCIETY AND WAS A REGULAR PARTICIPANT IN MANY CONTESTS AND FURTHERED AND ENCOURAGED YOUNGER MEMBERS OF THE AMATEUR FRATERNITY TO BECOME ACTIVE AMATEURS IN THE DIGITAL MODES.

SYD WAS KNOWN THROUGHOUT THE WORLD WITH HIS ORIGINATION OF THE RADIOTELETYPE DX NOTES AND, ALTHOUGH HE GAVE THE ORIGINATION OF THESE NOTES TO OVERSEAS AMATEURS AFTER ILLNESS FORCED HIM TO CUT DOWN ON HIS RADIO ACTIVITIES, THEY ARE STILL SENT WORLDWIDE WEEKLY AND KNOWN AS THE "VK2SG DX NOTES" - THEY EVEN NOW APPEAR ON THE NEW SUPER HIGHWAY - THE INTERNET. SYD HAS MANY AMATEUR FRIENDS AROUND THE WORLD WHO REMEMBER HIM FONDLY AND WILL MISS SEEING THAT VK2SG CALLSIGN ON THEIR SCREENS. SYD'S PIONEERING IN AMATEUR RADIO HAS GIVEN MANY THOUSANDS OF PEOPLE AROUND THE WORLD A LOT OF PLEASURE.

HE IS SURVIVED BY HIS WIFE JEAN.

VALE SYD MOLEN, VK2SG

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 DECEMBER - 04 JANUARY)

ISSUED 05 JANUARY

SUMMARY

Date 29 30 31 01 02 03 04
10cm 76 75 75 75 75 81 85
A 2 7 7 5 7 8 (4 estimated)
T 4 14 10 -2 19 24 16

SOLAR ACTIVITY WAS LOW ON 3RD JANUARY, AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 29TH TO 30TH DECEMBER, AND QUIET TO UNSETTLED FOR THE REST OF THE WEEK.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH FREQUENCIES DEPRESSED TO 20 PER CENT DURING NIGHT HOURS ON 31ST DECEMBER, AND ENHANCED AT TIMES TO 15 PER CENT ON 3RD JANUARY. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 3RD.

FORECAST (05 JANUARY - 11 JANUARY)

SOLAR: VERY LOW TO LOW

GEOMAGNETIC: QUIET TO UNSETTLED

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

NOTES OF INTEREST:
DJIBOUTI, J2. From 11th to 18th January, J28ML with other ten hams will activate an Island on the Guld of Aden (AF053). Band used from 10 to 160 and mode include also RTTY. Qsl via F5LBM.

PRATAS, Is.BV9P. Under the Xmas tree we all received a new one from the DXAC which has votes unanimously to add Pratas Is. to the DXCC list. QSL cards will be accepted starting 1

April 1966, card sent prior of that date will be returned without action.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/(TILDE)jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at W5KSI.#NOLA.LA.USA.NA.

Happy New Year 1996 and gl de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

DX Bulletin 66 ARLD066
>From ARRL Headquarters Newington CT
December 28, 1995
To all radio amateurs

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, Dick, K7BTW, Laci, W1PL, The DXNS, Derek, KC4ELO, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

KUWAIT, 9K2. Derek, KC4ELO, reports that Tom, 9K2ZC, and his wife Donna, 9K2YY, will be leaving Kuwait sometime in March of 1996. They both can be found between 14195 and 14220 kHz usually around 1500 to 1600z during this time of year. QSL Manager KC4ELO states he will start doing bureau cards when they are out of Kuwait. He plans to keep their logs open until the end of 1996. QSL to KC4ELO, Raymond H. McClure, 674 Crestlyn Drive, North Augusta, SC 29841.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, is currently active from Penang Island, IOTA AS-015 located in the Penang State Group. He will be looking for stateside stations on 17, 30, 40 and 80 meters with no times given. QSL to Tex Izumo, Bukit Dumbar Apt. 9-4, 97 Jalan Thomas 11700, Gelugor, Penang, Malaysia or via the bureau to his home call, JA0DMV, through JARL.

BANGLADESH, S21. Andy, S21YE, will be active for one more year on all bands, SSB only. S21B is also active for CW QSOs. Check 14226 kHz around 0030z. QSL via G0EHX.

MADAGASCAR, 5R. Gerard, F2JD, will be returning to France before heading to 5R-land. He plans to stay in 5R-land for at least 6 months, beginning in January. He will try to be active on all bands.

MONACO, 3A. Luc, I1YRL, will be operating from here as 3A/I1YRL during January, February and March. He will also be

active from Geneva as 4U1ITU during this time period. QSL via I1YRL.

SOUTH ORKNEY ISLANDS, LU. LU6Z has been very active on 40 meter CW from 0200 to 0500z. QSL via LU6EF.

COMOROS, D6. The DXNS reports that Michel, FR5HG, is on an assignment here and is waiting for a D68 callsign.

SANTA CATALINA ISLAND, HK0. Wolfgang, DF4UW, plans to be active from this small island near Providencia, NA-049, from January 9 to 24. The call will be HK0/DF4UW. QSL via his home call.

GUATEMALA, TG. Manfred, TG9IKE, reports that David, K4TT, will be active as TG9IDK from January 1 to 10. He will work all bands from 10 to 40 meters, mostly CW, 5 up from the edge of the band, as propagation allows. QSLs go to K4TT's call book address.

INDIA, VU. Bernhard, DL2GAC, will be active as VU2BMS during the month of January. Activity will be mainly on 80 and 40 meters operating SSB and Pactor. QSL via CBA.

QSL NOTE. 4X6FU is not the QSL manager for 4L1FL. Send QSLs for this one to 4X6UF.

SPECIAL EVENT STATION. Hungary will celebrate its 1100th birthday with special event operations from 0001z January 1 until 2400z December 31. Look for participants with HA1 to HA0 or HG1 to HG0 prefixes.

COMING EVENTS

JANUARY 6TH-7TH ARRL RTTY ROUNDUP

FEBRUARY 10TH-11TH WW RTTY WPX CONTEST

I have a BC2500XLT in Excelent condition. It has never been used outside the house. All known MODs have been applied.

All original packing materials and box are present along with accessories:
Antenna, Charger, Leather Carrying case, Belt Clip, Operating guide and Registration form.

The features include:
100 channel/second Turbo Scan
VFO Control
Direct Keypad entry
400 channels
20 banks
25MHz - 1.3GHz
10 Priority channels
Auto Scan for Weather channels
Auto Store while scanning
Auto Sort
Retains programming with battery removed.

Asking $300.00 I'll pay shipping.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 JANUARY AND FORECAST FOR 18 JANUARY - 20 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 16 Jan
Daily Proton Fluence >1 MeV: 4.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.2E+08 (moderate)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Jan 19 Jan 20 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Jan: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 16 Jan
Learmonth 11 3222 3332
Fredericksburg 7 8
Planetary 5 6

Observed Kp for 16 Jan: 3022 2212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Jan 20 active, with possible minor storm periods.
19 Jan 7 quiet to unsettled.
20 Jan 20 active, with possible minor storm periods.
COMMENT: IPS Geomagnetic Warning 1 was issued on 15 January and
is current for interval 18 January only.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
17 Jan Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Jan Normal Fair Poor
19 Jan Normal Normal Fair
20 Jan Normal Fair Poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
17 Jan -19

Observed Australian Regional MUFs:
Sydney: near predicted monthly values, with regular Sporadic
E layer.
Hobart: 15-30% depressed, with Sporadic E layer and
night-time Spread F.
Townsville: 15-30% depressed until 05UT, near predicted
monthly values until 08UT, and no data therafter.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Jan 0 Near predicted monthly values, with Sporadic
E layer.
19 Jan -20 About 20% below predicted monthly values.
20 Jan 0 Near predicted monthly values, with Sporadic
E layer.
COMMENT: IPS HF Communications Warning 3 was issued on 16 January
and is current for interval 18-19 January.

969. Re: Finding power line noise source

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-17 00:00:00 UTC
From: jackg@xetron.com
Message-ID: <DLC699.J4K@xetron.com>
Source record: 232030

In article <4dgo6p$lnf@chnews.ch.intel.com>, tom_boza@ccm.ch.intel.com
says...
>Once I can pin point the noise, how do I confront that
>neighbor and tell them to turn off whatever so I can operate?
>With my luck, Im most likely giving that neighbor TVI!!!
>Now he/she will know its me!!!
I just found a neighbor with a bad sodium light that kept turning off,
then back on. When it turned on, it put out noise from 300kc to about
10 mc. I knocked on the guy's door, told him I was a "SCANNER" listener,
and mentioned that his light was causing interference. I told him
I would give him a new bulb if he would replace it. He said that
he would. It cost me a few bucks for the new bulb, but no more noise!

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE QUESTIONAIRE

The Solar Terrestrial Dispatch is considering conducting an extensive Internet based course designed to teach individuals with no experience how to accurately forecast radio propagation and space weather conditions using resources on the Internet and computer software. The course would cover over 150 topics (see the preliminary outline below) and would also discuss the proper use of several important software packages as aids in developing forecasts (being considered for inclusion as part of the course work).

A sample course outline follows the questionaire below. Please review it before reponding to the questionaire.

Completion of this course would probably require between 2 and 3 months with new course material provided on a weekly or biweekly basis. The course could begin as early as mid-February or early March. Between 50 and 60 students could be enrolled at one time, accepted on a first-come first-served basis (no prerequisites or previous formal education required).

Please e-mail Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu with the results of this questionaire so we can determine whether their is sufficient interest to proceed.

QUESTIONAIRE
----

1. Does this course interest you?

2. This course could be enrolled in one of four different ways:
A. Without the computer software & subscription (see outline below).
Suggested price: $150.00USD
B. With the computer software and without the subscription.

Suggested price: $200.00USD
C. Without the computer software and with the subscription.
Suggested price: $200.00USD
D. With both the computer software and the subscription.
Suggested price: $250.00USD
Which course-variant would you prefer to enroll in (A, B, C, or D)?

3. Are these price levels reasonable? If not, specify what you feel would be more appropriate prices and indicate whether you would commit to taking the course at your suggested price levels.

4. Which method of delivery would you prefer:
A. FTP-based extraction of Word-Perfect source with imbedded imagery all in compressed ZIP-type formats,
B. WWW-based extraction of course material using software such as Netscape or Mosaic (not included as part of the course), or
C. Postal-Mail delivery of course-work on printed paper (prices could be substantially higher with this delivery method).
Which method of delivery would you prefer (A, B, or C)?

5. Are there any other topics you would like to see covered in this course? If so, please specify.

Thank you for taking the time to respond to this questionaire. If there is sufficient interest, we will post another Internet bulletin giving all of the course details and pricing, etc, together with invitations for applicants to begin enrolling in this course.

The sample course outline follows below:

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $490.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding Magnetic Indices
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere
- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques

- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption

Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR
x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere
- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts
- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques

- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications
* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques
- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

971. KPIG Radio will be on the air January 21st

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-17 00:00:00 UTC
From: anonymous-remailer@shell.portal.com
Message-ID: <199601180530.VAA03454@jobe.shell.portal.com>
Source record: 232032

```
**********************************************************************
* The San Francisco Bay Area's most powerful pirate radio station *
* *
* K P I G -- 88.9 on your FM dial *
* *
* p r e s e n t s *
* *
* An evening of exposes *
**********************************************************************

This month's broadcast will begin at 10:00 PM this Sunday, January
21st. Highlights include:

Scientology Expose:

o Hear all about the "secret" documents the Church of Scientology is
trying to keep secret
o Learn what L. Ron Hubbard said about Scientology just before he died.

PETA Expose:

o Hear PETA members torture innocent animals while making a propoganda
film.

Amateur Radio Expose:

o Learn why Ham Radio has outlived its useful purpose and is now taking
valuable spectrum away from the public in order to allow drunk radio
amateurs the ability to use their overpriced CBs to chat with themselves.

With over 300 watts ERP, we are the most powerful pirate radio station
in the San Francisco Bay Area. We have as much or more power than many
smaller commercial stations in this area. It should be possible to
hear us all along the Penninsula and well into the South Bay. We
welcome reception reports and other listener feedback on the KPIG
Squeal Line. The phone number will be announced several times during
the broadcast.

Note to potential DF-ers. Our use of special ECM equipment will defeat
all known DF-ing techniques and will render it impossible for anyone to
locate the source of our signal. Save yourself some time and frustration
and stay at home.
```

972. Announce: New RF Design sw for Windows

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-17 00:00:00 UTC
From: Jon Jenkins <academic@onthenet.com.au>
Message-ID: <4djn97$rqt@diablo.OntheNet.com.au>
Source record: 232033

RF: The Analog Analysis Program

by Academic Technologies

RF is a new inexpensive circuit simulation sw package for
Windows, Windows 95 and Windows NT. It is primarily
intended for Radio Frequency design but is applicable
to all frequencies.

Come and have a look, visit out Web site at:

http://www.onthenet.com.au/~academic/Welcome.htm

or download the readme.txt and rfdemo.zip demo
version from:

ftp.onthenet.com.au in /pub/acdemic/

or mail us at:

academic@onthenet.com.au

Briefly RF has the following functions:

Tools
Convert between S,Y,Z and ABCD two port parameters
Design Butterworth and Chebichev Filters
Design and analyse coil and wire inductors
Sophisticated Microstrip design and analysis
Design parallel, series resonators and LC filters
Complex/Polar calculator

Compnents
Capacitors (includes parasitics)
Resistors (includes parasitics)
Inductors (Q included)
Curve fitted S parameter devices and whole circuits (fit types:
rational, polynomial, spline, ls, linear)
OpAmps
Transmission Lines (ideal and lossy, open and shorted)
Transformers (ideal and non ideal, leakage inductances and resistances)
FETS (all parasitics)
Tapped Inductors (Q and parasitics)
Beta controlled current sources (all parasitics)
VCCS
Mutual inductors (all parasitics)
Source and Loads
DC source

Analysis Facilities
Swept frequency (Full and Nodal)
Single frequency component tolerance
Swept frequency component tolerance
DC bias point analysis
Pulse analysis (Fourier simulated)

Text Output
Transducer gain
Linvil c stability
Stern k stability
Input impedance
Output impedance
Input admittance
Output admittance
Voltage gain
S11, S12, S21, S22 S parameters
Input reflection coefficient
Output reflection coefficient
Maximum transducer gain possible
Source admittance/impedance to obtain Gtmax
Load admittance/impedance to obtain Gtmax

Graphical Output
Voltage Gain
Transducer gain
Input impedance
Output impedance
S11, S12, S21, S22 S parameters
Input reflection coefficient
Output reflection coefficient
Pulse time trace
Multiple "tagged" plots
Autoscaling or manual scale
Auto cursor tracking (warps to and displays the nearest
points) or absolute
Points or line traces

This logic easily extends to allowing all USA licensed amateurs
access to HF CW bands, since they'd need to "know" CW to use those
bands. This includes those precious Extra-only 25KHz slivers of
CW sub-band. Interesting thought.

MK> owned the HT just over 1 year, of course. Anyone with similar proble
MK> Advice?

What are you using as an antenna? When I first got my 202, I tried
using a power supply (also the lighter plug when I was in the car) with
the rubber duck and got ER2's all over the place. Since I got a J-Pole
up at the house and built a 1/4-wave for the car, it's never happened.

Has something to do with all the reflected RF the duck can't radiate
coursing through the 202.

Should've bought the 5-year warranty...I did on both of my 202's and
it's already paid for itself on my first unit (it covered a new ni-cad
pack).

Enough already! Will you two just grow up!

I don't give a flying @#%$ what your problems are with each other or with
the world for that matter.

I can't speak for everyone, but I am growing tired of you wasting the
bandwidth that others respect (not me mind you, but "others").

Take a hint from comments like: "The buffer on my server only lists back to a
few weeks... too many Cheek/Moss messages I guess !", and "maybe from having to
read too much Cheek/Moss diatribe." some of us are growing tired of your
childish banter.

When I try to read a follow up article on the Pro-26 I get verbal diaharea
(sp?) mixed in as is in the following example:

> >I need the cellular mods for The Radio Shack Pro-26 Hand Scanner if any are
> > available. Thanks.. Steve
>
Don't we all. The PRO-26 cannot be modified for cellular
reception, nor can any other scanner manufactured or imported
after April, 1994. There are a couple of roundabout exceptions,
but those require reprogramming the EEPROM. The PRO-26 is
not one of those.

Alas. 'Sniff.

BC>candor and vicious attack is more than provocative.

I wish that you would at least have the courtesy to add something
descriptive to the subject line like, "BS added".

Bill, comments like:

>Bill Cheek you are doing yourself much more harm than good
>reputation wise by posting before regaining your temper. I
>have read your books and columns and in the past had some
>respect for you and your efforts. I too, have a temper, but
>your postings particularly with the challenges and foul language
>do little to shore up your public image. If the intent of your
>adversaries is to make you look bad you are helping them tenfold
>with your "defense". I know my respect for you has been diminished

>and I am sure the respect of others has also.

seem to be saying a lot. Tell ya what, if you ignore all responses along these threads and let it just fade away, I'll buy a copy of your book! Any one of them!

If you must do this in a NewsGroup, why not try soc.religion.christian or soc.religion.christian.bible-study. Those folks might be a bit more understanding and forgiving.

Sorry about wasting everyone else's time.

John

Hello all:

In the last message that I sent over usenet I forgot to include my
url for my web site. The URL is "http://www.dfw.net/~dmclean". I have
many things on my web page. Here is a list of many things:
1. Links to other ham stuff (QRZ,FCC,ARRL,ETC).
2. List of sites that have radio mod's.
3. A swap page to exchange junk on!
4. Repeter list for D/FW area (other states comming soon!)
5. List of web pages made by other ham.
6. Page to view all comments about my page (Not yet working but comming)
7. ***A fun place to be!!!***

If you have a web page or want to send a comment about my page please
send mail to dmclean@dfw.net. I Have more plans in work for the page. IRC
channel comming for talk. Keep you ears open!

979. qsl etiquette (see Feb 1996 QST)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-18 00:00:00 UTC
From: wnewkirk@iu.net
Message-ID: <4dkfdj$inc@cc.iu.net>
Source record: 232039

so i'm reading through the feb issue of QST tonight and come across a letter by steve licht, wf2s, calling for a strange new QSL etiquette.

one where anyone who contacts a station and then sends a reception report to that station (usually marked with a PSE QSL, 73 or so) is also expected to pay for the return mailing of the other guys card (as an SASE for a postcard no less.)

Am I the only one that thinks Mr Licht is just a tiny bit nuts? Here he is, a domestic US station, working a special event (the HPM 126 affair), and he expects other US stations to pay to get his card after they sent theirs to him? wf2s, a US station in the country with the lowest postal rates in the world and probably the cheapest QSL card sources in the world (anything from process 4 color to badly printed on an old dot matrix will do), working a popular event, and now wanting to welch on his part of the QSL duties.

steven, ol' buddy, ol' pal...the folks that sent you the cards already did you the honor of paying to get their cards to you. you should return the favor.

(and next time be doubly clear that you're one of those pretend hams that doesn't QSL even a received QSL).

I've always tried to QSL 100%...especially to domestic stations. i guess if you have one of those funky 2x1 calls, you can con people into thinking you're really DX that needs the green stamps to survive.

jimwills@ballistic.com wrote:

+GDB:FCC listen to us. The internet isn't broken so don't try to fix it.
+GDB:If you want to kill something, TAX it.
+GDB:
+GDB:I quote from the W5YI Report of January 15, 1996: "Be prepared for an
+GDB:internet "Access Tax." The FCC is said to be very concerned that users
+GDB:can bypass long distance companies to make calls through the use of
+GDB:internet telephone schemes. The FCC believes that at some point they
+GDB:will have to address the economic impact of Internet technology on the
+GDB:nation's telephone companies. Being considered is a flat tax fee
+GDB:levied on the number of users served by Internet Service Providers.
+GDB:Another suggestion has ISPs paying a fee based on the amount of
+GDB:Internet traffic passing through their systems. ISPs would pass along
+GDB:the extra cost to their customers."
+GDB:
+GDB:We already pay tax on our phone bill, then another tax on the Internet
+GDB:service here in Texas. Will we permit this to happen? Write your
+GDB:Congressmen.
+GDB:jimwills@ballistic.com
+GDB:

Don't pay attention to this un thought out post. The phone companies
are in no danger whatsoever. The internet will never be able to carry
even close to the traffic that the phone companies can carry. This
method is not and never will be close to the telephone system in
quality and reliability. The FCC has no taxing power either. This is
flame bait pure and simple.

: 2, and not transmit on 70 (but still tx's on 2, and rx's on 70). I have noticed
: that when it is acting up, and you tx on 70 (or at least try to :-)), the on airlight
flashes.
:

Isn't the "on-air light flashing" the radio's way to tell you that the SWR is
too high? I seem to remember that (but of course the manual isn't near by).
If so, this could be the "broken center pin on the BNC connector" problem.
An easy check is to wiggle the antenna as you receive a moderate signal, and
see if it cuts in and out.

Fixing the bloody thing isn't that hard, as long as you have steady hands,
good eyes, and a very small soldering iron. If you want a blow-by-blow
walk through, let me know. I think I've still got the write up I did after
my first experience with this problem.

Good luck,

Greg KO6TH

Hello Bill,

What you consider a strange new etiquette is normal practice,
and for a station wanting a QSL from a rare country a must.

Personally I consider it rude to send direct QSL cards without
return postage (unless otherwise arranged in the QSO). As to the
direct QSL's I receive with only 1 US$, I hope it happens out of
ignorance. Air postage costs here a little over 2 US$.

You're kidding? Maia has a way to make money off of everything!! The FCC Form 610-V IS available from the FCC AND the ARRL for FREE!!!! As for prison labor, if the job is cost effective and substantively adequate, it shouldn't matter. BTW, is prison labor alleged to be used for printing? For binding? For distribution? I'd be interested in hearing more about this.

There is no problem. This is exactly how it is (and always was)
supposed to be. It may have worked differently for you in the
past, but we can't figure out why. There are several things you
can do to make it ID regardless of activity:
- use a scheduler to send the IDs. Four hourly events set to go off
at the top, 15 minutes after, half past and 15 till the hour would
do it.
- use a user timer to send a message and start the timer again.
- use an output line to pull the cor line low occasionally, to make the
controller think that someone is keying it up.

1.4 List of contributions.
1.5 Credits and other things.

_____________________________________________

1.0 What is BASIC Stamp ?
-------------------------

This is being written for people who have no idea of what a BASIC
Stamp is...

BASIC Stamps are small reprogrammable single board computers (SBC)
that run BASIC programs and are made by Parallax, Inc. in US. At
first glance, they may seem fairly minimal - and in fact, they are.
But with software that fully utilizes all available hardware, the
Stamps give you powerful features - without the cost of hardware.

Their low cost and simplicity make the Stamps perfect for many
prototyping and control applications. It's suitable for electronics
hobbyists as well as electronics professionals in many different
areas.

Typical application areas for BASIC Stamp's are...

- General electronics
- Home automation
- Robotics
- Mini PLC
- Education
- Prototyping
- HAM related applications
- Special effects in films
```

- Industri control
- Geological instruments
- Computer peripherals
- Scale model hobbyists

As an talent engineer and technical writer expressed it...

- BASIC Stamp is the 555 of the 90's !

1.1 What is L.O.S.A all about ?

I started to compile L.O.S.A because I know there are lots of great ideas and many problems that are solved with the BASIC Stamp and the main purpose of this list is to get an idea of what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

Remeber it's up to all of us if this list are going to be any good and I'm looking forward to receive a description of your application.

1.2 How can I contribute to this list ?

If you have done something with the BASIC Stamp (big or small) that you are willing to tell others please use the form given below and write a short description, nothing fancy is needed just a simple explanation. If you have source code to share that's even better but it's not necessary.

Then e-mail the form to:

cj@algonet.se

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in the L.O.S.A form on the Web-page...

http://www.algonet.se/~cj/losa.html

=========================================================================
Title : Robo-Cat [# 001]
=========================================================================
Date : 950807
Author: Gustavson Guy W.
E-mail: GWGUSTAVSO@mpg.norstan.com
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: N/A
Filename : N/A
URL : http://www.winternet.com/~bigfoot/cat.html
-------------------------------------------------------------------------
Description :

My cat, Kesha, was recently diagnosed with Heptic Lipodosis. Or
"Fatty Liver", basicly what this means is that for some reason he
stoped eating and his liver started converting body to useable
sugars. The fat deposists biuld up in the liver and cause severe
liver damage. Because the liver isn't working well the cat feels
crappy and wants to eat even less. The treatment for this disease is
to run a tube down down the cats nose into his stomach, or a PEG
tube through the abomine wall into the stomach and feed the cat a
liquid diet this way.

I love my cat, but I can't be there every three hours to feed him
through the tube for a month. Something about work and deadlines and
such. So I went to a local supplus house and got a tiny motor driven
pump, a case, some switches, a micro switch, ect...

The micro switch is mounted such that the switch trips for every
rotation of the pump shaft. The stamp turns on the pump for on a
single rotation at intervels programable from the controll switches
on top. An alarm buzzer and LED flash if the pump fails to run for
any reason. The unit is programable for 9 differents deleviery rates.

Now he gets a slow continuious feeding and he seems to tolerate this
better than the 100ml feeding every three hours.

=========================================================================
Title : Logic Rudder [# 002]
=========================================================================
Date : 950812
Author: Christer Johansson
E-mail: cj@algonet.se
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : LRUDDER.ZIP
URL : http://www.algonet.se/~cj/filelibrary/BS1-IC/
-------------------------------------------------------------------------
Description :
```

Many of the new and very realistic flight sims available today needs rudder to let you get full control. This one uses a digital pot from Xicor (X9104) and 10 other components. Connects to a standard IBM-PC game port and power is taken from the port.

It uses two micro switches for controlling the rudders left or right and to indicate when rudders move there is a red LED that lights up when you press the micro switches and to indicate center there is a green LED. If you press the both micro swithes the rudder will automaticly return to center position.

There is a trim pot to set the desired step rate from slow to very fast and the Xicor pot has 99 steps wich gives a fair resolution.

```
==========================================================================
Title : Interfacing MAX186 8 channel 12bit A/D [# 003]
==========================================================================
Date : 950925
Author: Helmut Fligge
E-mail: h.fligge@asco.nev.sub.de
--------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : N/A
--------------------------------------------------------------------------
Description :
```

This Program interfaces the Stamp1 to the MAX186 A/D converter. Via RS232 2400bps the stamp is asked to measure channel numbern. After conversion the result will be returned to the host computer as an ascii string (0 .. 4096). Conversion rate is about 4 measures per second.

```
==========================================================================
Title : Scrolling LED Sign [# 004]
==========================================================================
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org
--------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Maybe sometime
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html
--------------------------------------------------------------------------
Description :
```

Scrolling LED sign, 35 super-bright LEDs in a 5-by-7 matrix in the prototyping area of a Basic Stamp rev D. A scrolling alphanumeric message moves one pixel at a time, just like real scrolling LED signs, except this one only displays one full letter or portion of two letters at a time as the message moves by.

```
=============================================================================
Title : Tone Decoder [# 005]
=============================================================================
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Soon
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html
-----------------------------------------------------------------------------
Description :

Listens for telephone touchtones, displays phone numbers on LCD
screen and echos them out RS-232 port. Circuitry fits in prototyping
area of rev D Basic Stamp:

Microphone preamplifier, touchtone decoder IC.

=============================================================================
Title : Pager [# 006]
=============================================================================
Date : 950928
Author: Don McKenzie
E-mail: donmck@tbsa.com.au
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : PAGER.BAS
URL : ftp://ftp.parallaxinc.com
-----------------------------------------------------------------------------
Description :

This program for the Basic Stamp is used to monitor 4 hardware
signals. If a change takes place, (after testing for a false trigg-
er) then a cheap 2400 baud MODEM is used to dial into a Telecom
Alpha-Numeric pager. It leaves a message which consists of a 2 digit
I.D. (01 to 99) followed by the 4 signal levels of pins 3 to 0.

Status of the signal levels message: 0=Low, 1=High. EG: "011110"
means Unit "01" has pins 3, 2, and 1 high, and pin 0 is low.

A "Ring-In" feature is also included. By ringing the MODEM for a
short period, then hanging up, the Stamp will dial your Pager and
report the current hardware status of these four signals.

This program uses about half of the available memory, so if the user
wishes to add enchancements such as "Multiple Ring-In's" say within
a minute, for a command selection, there is plenty of program space
left.

=============================================================================
Title : HexWalker Mobile Robot [# 007]
```

```
=========================================================================
Date : 950929
Author: T. R. Thornton
E-mail: mandtsys@ix.netcom.com
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D or BS1-IC
Code available: YES
Filename : WALK.BAS
URL : N/A
-------------------------------------------------------------------------
Description :

HexWalker is a six legged mobile robot that is controlled by a BASIC
Stamp or BS1-IC, and driven by three servo motors (similar to Futaba
S148). It is the simplest walking machine architecture that can walk
forward, backward, and turn left or right.

=========================================================================
Title : Robo Bug [# 008]
=========================================================================
Date : 951003
Author: David Novick
E-mail: dkn@cimar.me.ufl.edu
-------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : http://www.me.ufl.edu/~dkn
-------------------------------------------------------------------------
Description :

Using two stamps, a robot with six legs (2 degrees of freedom each)
was able to walk and turn (at this stage, not very gracefully).

=========================================================================
Title : EXPBOT Robot controlled by Stamp [# 009]
=========================================================================
Date : 951009
Author: Marvin Green
E-mail: marvin@agora.rdrop.com
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : EXPBOT.BAS
URL : E-mail author and he will send it
-------------------------------------------------------------------------
Description :

This program allows a cool robot to move abound a room in search of
light. Like a moth. Simple program changes can dramatically change
the robots behavior.
```

```
======================================================================
Title : Andrews Ever Evolving Lego Robot [# 010]
======================================================================
Date : 951119
Author: Andrew H. Hochheimer
E-mail: softarts@ciaccess.com
----------------------------------------------------------------------
Stamp model : BS2-IC
Code available: YES
Filename : N/A
URL : http://www.wincom.net/~softarts
----------------------------------------------------------------------
Description :

Currently the robot can only navigate to the brightest light source
in a room. It's current operation mode has four major steps: - Scan
a 180 Degree Field of "Vision" taking light level readings, and
determining the brightest direction of light. - Decide if it needs
to turn left, right, or continue moving forward. - Check for colli-
sion with an object while moving, if a collision occurs, display the
total travel distance on the display - Move forward for 1.5 Seconds
and then repeat the process.

Currently I am using Two Futaba FP-S128 Servos (any RC Car Servos
would work) one to sweep it's "sensors" form left to right, and one
to "stear" the robot.

You can see pictures and more information on my homepage, just
follow the lego robot link.

======================================================================
Title : Factory Monitoring System [# 011]
======================================================================
Date : 951120
Author: Paul Willemse
E-mail: pjwill@merlion.singnet.com.sg
----------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : N/A
URL : E-mail author
----------------------------------------------------------------------
Description :

The system presently consists of 4 Basic Stamp units. Each monitors
up to 5 inputs. The inputs are 'digital' (switches) and/or analog
(temp, airflow, current, etc using commercial sensors). All stamps
communicate the results via serial mode to a Macintosh (Yes a Mac!)
where the results are graphically displayed and monitored. Alarms
are set for certain conditions.

The transmission is simple, one way only. Each stamp sends the info
at a 'random' interval not exceeding 2 seconds. The message format
```

is fixed, the Mac will throw away any conflicts in case two or more stamps transmit at the same time. BTW this happens very seldom. The max time any stamp can be 'absent' from the chain before an alarm is raised is six seconds (failure, transmission collisons, etc). This is controlled by the Mac.

The 'system' is presently in beta test, the client wishes to expand up to 20 stamps. At that point we will likely use the BS1-IC or BS2-IC on custom boards located around the facility.

Code is available upon request (e-mail) partial, some is proprietory to my client.

```
==========================================================================
Title : Wave to the Cats/Desk Temperature [# 012]
==========================================================================
Date : 951121
Author: Paul Haas
E-mail: paulh@hamjudo.com
--------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: Yes
Filename : See web server
URL : http://hogwild.hamjudo.com/cgi-bin/stamp
--------------------------------------------------------------------------
Description :
```

The Stamp has a serial connection to web server, a cardboard hand, a servo motor to move the hand, and a DS1620 thermostat chip to measure the temperature. The web server can request the current temperature or start the hand waving. See the web page for the source code for the temp and the web server.

It's mostly useless. The cats ignore the hand. A few people find it entertaining.

```
==========================================================================
Title : Gamer's Die Roller [# 013]
==========================================================================
Date : 951122
Author: Larry Tremblay
E-mail: ltremblay@domus.com
--------------------------------------------------------------------------
Stamp model : BS2-IC
Code available: N/A
Filename : N/A
URL : N/A
--------------------------------------------------------------------------
Description :
```

The Gamer's Die roller is a little thing I am putting together as my first Stamp Project. The Roller allows cumulative rolls of n dice up

to 256 sides, so long as the sum does not exceed 99,999,999(!)

It uses two 74HC161 4 bit counters cycling at 1MHz to draw random numbers off of. Input is achieved via a Grayhill model 38 keypad and a 74C922 keypad decoder. Display is on a Siemens PDSP-2111 8 character smart display (5x7 LED characters) fed by two 74HC164 serial to parallel shift registers cascaded so I can use Shiftout to feed 16 bits of control + data off of 2 pins.

The code is very simple, the most exotic part being the random number generation. In a nutshell, it is:

```
Begin Loop
S = 8 bit number drawn from the counter (random)
if S < (255/N) x N (integer divide, N is number of sides on die)
exit Loop
End Loop
```

This gets (pseudo) random numbers whose average is not skewed downwards by the counter's max of 256 (i.e. a 100 sided die is not affected by the extra 56 in the count maximum)

Using gamer's dice notation, (5d6 = sum of 5 six sided dice, 3d10 = sum of 3 ten sided dice), the user can input whatever combination they wish, including just 'd6' for one six sider. The keypad I have has removeable keycaps with legends, so I have 0-9 plus 'd' and '=' on them.

As noted earlier, since I am using an 8 bit counter, the maximum die size is 256, although that could be fixed easily by sampling two, three or more times for each die.

Anyhow, that's it. When the code is done and debugged, I'll be happy to e-mail it to any who want it.

```
======================================================================
Title : Stamp II Serial I/O [# 014]
======================================================================
Date : 951128
Author: John Hansknecht
E-mail: Hansknec@cebaf.gov
----------------------------------------------------------------------
Stamp model : BS2-IC
Code available: Yes
Filename : HAL01.bs2 and HAL01.bas
URL : ftp.parallaxinc.com
----------------------------------------------------------------------
Description :
```

A bare-bones demonstation of 2 way serial communications between a PC running Qbasic and 1 or more Stamp II's.

```
=============================================================================
Title : Voice and CW Fox Hunt Transmitter IDer [# 015]
=============================================================================
Date : 951221
Author: Sam Guccione
E-mail: sguccion@outland.dtcc.edu
-----------------------------------------------------------------------------
Stamp model : Counterfeit Stamp
Code available: Yes
Filename : Revision of S. Edwards MORSE program
URL : N/A
-----------------------------------------------------------------------------
Description :

An IDer based upon the MORSE program. Has 4 time delays as well as
a random time delay. Circuitry includes selection of a voice id
using the Radio Shack 10 voice board or the Walden bookstore 10 sec
talking gift card. This is a very simple circuit and program but was
developed by my students under my direction.

May be of interest to someone out there.

=============================================================================
Title : Lift (elevator) Controller [# 016]
=============================================================================
Date : 951225
Author: Dave Bell
E-mail: dbell@cup.portal.com
-----------------------------------------------------------------------------
Stamp model : Faux Stamp (BASIC Stamp clone)
Code available: Yes
Filename : Upon request
URL : N/A
-----------------------------------------------------------------------------
Description :

A simple control loop monitoring lift Call buttons (with debounce)
and Limit switches, forbidding manual control past limits, and en-
forcing a Stop before reversal of direction. This will be used in
an owner -designed and -built single story platform lift for a home.

=============================================================================
Title : Paging with the Stamp [# 017]
=============================================================================
Date : 960104
Author: Kurt Clement
E-mail: kclement@kraft.com
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Yes
Filename : monitor.bas
URL : N/A
-----------------------------------------------------------------------------
```

Description :

Use the Stamp to monitor several inputs, two temperature and two
contact closures in this application. When inputs go outside set
limits, dial pager and send coded message. Used to monitor power
failures and temperatures for computer and network equipment since
August 1994, running on 9 V power supply from one of the UPS units.

==========
Title : Switching Sytem [# 018]
==========
Date : 960109
Author: Alexander Avendano
E-mail: aavendan@aros.net

Stamp model : BS1-IC Module
Code available: N/A
Filename : N/A
URL : N/A

Description :

I'm almost finishing a Basic Stamp Based Switching System (Small
Phone system) which I consider very usefull for small companies that
cant'n afford other brands. This is designed with a host computer
which will have a vox-mail and all the functions like big ones to
choose. I'm using BS1-IC's for the extensions process right now.

As soon I have complete it I will give the code away for small
Intelligent Switching phone system up to 2 Lines and 4 Extensions
using the L.C.D serial circuitry for information display. I forgot
to mention that the computer (Host for many processing functions)
will be running under Windows 3.1 and Windows 95, making this way a
usefull computer not only for the phone system but for ithers
application at the office.

Please be free to send me E-mail, about any suggestion.

==========
Title : Door Entry Card Reader [# 019]
==========
Date : 960110
Author: Ed Buckley/J J Barbarello
E-mail: ed@milinst.demon.co.uk

Stamp model : BS1-IC Module
Code available: YES
Filename : N/A
URL : N/A

Description :

Stamp 1 based version of the Card Reader article by J J Barbello as described in the August 1995 edition of Electronics Now. This version uses the Stamp 1 as a local controller determining the card number and deciding whether or not to allow door opening. Optional serial comms back to a master controller and optional local message readout using an LCD Backpack.

Lots of scope for further enhancement/experimentation. Circuit schematic and listing available.

==========

1.5 Credits and other things

Credits should go to all of you who makes this list possible I hope it suffices to say "Thank you to all who have contributed to L.O.S.A - we all appreciate it."

Special thanks to all of you at Parallax, Inc. who makes and support this great products !

If there is anything you think I've missed (or spelled wrong <g>) I would love to hear from you so we could make this list even better.

You could reach me at the following e-mail address: cj@algonet.se

Stay tuned,

/Christer

998. Blizzard of 96 - Amateur Radio NO PUBLICITY

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-18 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4dn3al$28m@newsbf02.news.aol.com>
Source record: 232058

Well I am pleased to report that the Jan. 18 edition of The News-Times (Danbury CT) carried a piece detailing the efforts of our ARES/RACES team in Bethel CT. This was on the front page of the local secion, included a color photo (although the photo was "staged" yesterday). As well, there was a item in the Young Readers' section of the paper, focusing on an interview with Jacqueline N1SLE, one of our younger ops (and my daughter :-)

This press was thanks to the work of Pete KZ1Z, who had the good sense to send press releases to local media.

Nice to see some good ham radio press once in awhile!

ARLD004 DX news

ZCZC AE46
QST de W1AW
DX Bulletin 4 ARLD004
From ARRL Headquarters
Newington CT January 18, 1996
To all radio amateurs

SB DX ARL ARLD004
ARLD004 DX news

This week's bulletin was made possible with info provided by Jean Michel, F6AJA, Alberto, LU1DZ, Jay, AF2C, Geoff, GJ4ICD, Joe, NJ1Q, Rick, KX4V, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

MADAGASCAR, 5R. Gerard, F2JD, of S79JD and 5Z4JD fame, is bound for Malagasy. His expected workload will preclude him from getting on the air until next month, though his stay is until September. All bands, CW, SSB and RTTY are planned. QSL via F6AJA.

SAN ANDRES ISLAND, HK0. Bob, K1WGM, plans to sign HK0/K1WGM in the ARRL DX Contest this February. He will concentrate on 160 meters. QSL direct to his home call sign.

WAKE ISLAND, KH9. Due to transportation difficulties, this DXpedition has been delayed for a week. Equipment has been shipped, however. Listen for AL7EL/KH9 between February 1 and 7. Email and URL addresses will soon be announced.

FIJI, 3D2. JI3CEY will be operating CW and SSB on 80 through 10 meters January 25 to February 1. The call sign to be used is unknown at press time. QSL to his home call.

TUNISIA, 3V. Albert, F2KN, should be active until January 21. He hopes to operate SSB from 3V8BB during evening hours his local time.

LAOS, XW. Adri, PA3BWS, will leave January 16 to visit family in Laos. He hopes to obtain operating permission for a trip planned for 1997.

SEYCHELLES, S7. Jan, DJ8NK, is still busy operating as S79NK and should remain so until January 20. QSL via AF2C. He plans to get

on the air while visiting ZS6 land in February.

SOUTH ORKNEY ISLANDS. LU6Z continues to be very active, with many New England network spots being for 160 meters. Operators LU6UO and LU1ZPF are operating from the Argentine Base on Laurie Island. QSL via LU6EF/GACW, Box 9, 1875 Wilde, Buenos Aires, Argentina.

VATICAN CITY, HV. Max, IK6RUM, will operate SSB from HV4NAC starting January 20. QSL via IK0FVC.

ARUBA, P4. John, K9UWA, and Jean, N9PXF, plan a multi-op effort signing P40I in the CQ WW 160 Meter contest later this month. They will sign P40/K9UWA before and after the contest. QSL via K9UWA direct or via the buro. John requests SASE or equivalent for all direct cards and to not send any card to the P4 bureau. Mike, K4PI, will be on from Aruba signing P49I January 22 to 29 and operate in the CQ WW 160 Meter contest. Outside contest hours he will be on low bands, 30, 18 and 24 MHz.

BELIZE, V3. Alan, NS0B, John, WC0W, and Robert, WG9L, will operate in the ARRL DX CW Contest in February. They should be in Belize February 14 to 19. Though mainly a contest effort, there should be some operating starting on the 15th after 1800z. Their contest call is V31EV. Non-contest calls will be V31EV for NS0B, and V31TP for WC0W. The V31 call for WG9L was not available at press time. QSL contest QSO's via NS0B. Non-contest QSL's go via individual operators USA calls.

ANTARCTIC MARITIME MOBILE. Bill, KA1WEG, will operate on 14180 and 14260 kHz January 25 to February 6 from aboard ship.

QSL INFO. N5GO has been receiving QSL cards for 8Q7SS. Please note the correct QSL Manager for 8Q7SS is K5GO.

PIRATES COVE. 3A2LU has been receiving QSL's for a station claiming to be 3A0IARU. 3A0 prefixes have not been issued since the 1970's.

THIS WEEKEND ON THE RADIO. The ARRL January VHF Sweepstakes starts at 1900z Saturday and runs to 0400z Monday. For complete contest rules see page 107 in January QST. Other events this weekend include the Hungarian DX Contest, North American QSO Party phone and QRP ARCI Winter Fireside SSB Sprint. Check page 105 in January QST for more info on these.

To all radio amateurs

SB SPCL ARL ARLX002
ARLX002 Helge Granberg, K7ES, SK

Helge O. Granberg, K7ES/OH2ZE, a Finnish-American amateur and ARRL Technical Advisor for many years, passed away at his home in Phoenix, Arizona, January 16. He was 63. Helge was a long-time employee of Motorola Inc. in Phoenix and owned his own consulting business. Helge wrote many technical articles on RF subjects for amateur and industrial radio publications worldwide. While living in his native Finland, he was one of the earliest pioneers in SSB technology.

He also was an accomplished inventor and is well-known for the ''Granberg Transistor,'' on which he holds one of his many patents. Helge's wife, Tuula, a son and a daughter survive. A memorial service is set for January 26 in Phoenix. His wife plans to return Helge's ashes to Finland for burial.

Condolence messages may be sent to 2144 E Aurelius Ave, Phoenix, AZ 85020.

You're dreaming Amigo...the government employes 20% of America, one in five.
..do you think for one little second that the biggest farce since the notion
of discount is going to listen to our pathetic wailing? Trust me, it's a flat
waste of time to even bother. The governemnt is so entreanched, and so rife
with nepotism - it's a career path filled with cousins, uncles, aunts, in-
laws and favored-offspring. If you actually managed to pull the plug on those
people, the East Coast would collapse! Trying to choke off their revenues is
tanamount to saying:"no by gum! I wont support all the family of these damn
worthless politicians!"..in short your kind of radical thinking implys that
Americans still have a choice, that somehow the government is going to do
what the majority of People think. It isnt going to. That 20% of the population
is going to do exactly whats good for themselves! including taxing the Internet!

If you had been following this newsgroup for a while, you wouldn't be surprised that no one is claiming OOK Morse as the most robust mode. That's because it isn't, and that fact has been explained here at length numerous times. There are a number of digital modulation techniques, and digital codes, which are quite a bit better than OOK Morse for getting through under harsh conditions.

Rather than rehash what has gone before, I'll simply refer you to Stephen Wilson's _Digital Modulation and Coding_ [ISBN 0-13-210071-1] for a concise and complete explanation of why OOK Morse isn't the most robust mode. A more exhaustive explanation is available in _Digital Communications Techniques, Signal Design and Detection_ by Simon, Hinedi, and Lindsey [ISBN 0-13-200610-3]. I highly recomend both of these books for those who wish to understand what it really takes to operate effectively in harsh channel environments.

INTERNET SPACE WEATHER AND
RADIO PROPAGATION FORECASTING COURSE
QUESTIONAIRE

/\

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE QUESTIONAIRE

The Solar Terrestrial Dispatch is considering conducting an extensive Internet based course designed to teach individuals with no experience how to accurately forecast radio propagation and space weather conditions using resources on the Internet and computer software. The course would cover over 150 topics (see the preliminary outline below) and would also discuss the proper use of several important software packages as aids in developing forecasts (being considered for inclusion as part of the course work).

A sample course outline follows the questionaire below. Please review it before reponding to the questionaire.

Completion of this course would probably require between 2 and 3 months with new course material provided on a weekly or biweekly basis. The course could begin as early as mid-February or early March. Between 50 and 60 students could be enrolled at one time, accepted on a first-come first-served basis (no prerequisites or previous formal education required).

Please e-mail Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu with the results of this questionaire so we can determine whether their is sufficient interest to proceed.

QUESTIONAIRE
---

1. Does this course interest you?

2. This course could be enrolled in one of four different ways:
A. Without the computer software & subscription (see outline below).
Suggested price: $150.00USD
B. With the computer software and without the subscription.
Suggested price: $200.00USD
C. Without the computer software and with the subscription.
Suggested price: $200.00USD
D. With both the computer software and the subscription.
Suggested price: $250.00USD

Which course-variant would you prefer to enroll in (A, B, C, or D)?

3. Are these price levels reasonable? If not, specify what you feel would be more appropriate prices and indicate whether you would commit to taking the course at your suggested price levels.

4. Which method of delivery would you prefer:
A. FTP-based extraction of Word-Perfect source with imbedded imagery all in compressed ZIP-type formats,
B. WWW-based extraction of course material using software such as Netscape or Mosaic (not included as part of the course), or
C. Postal-Mail delivery of course-work on printed paper (prices could be substantially higher with this delivery method).
Which method of delivery would you prefer (A, B, or C)?

5. Are there any other topics you would like to see covered in this course? If so, please specify.

Thank you for taking the time to respond to this questionaire. If there is sufficient interest, we will post another Internet bulletin giving all of the course details and pricing, etc, together with invitations for applicants to begin enrolling in this course.

The sample course outline follows below:

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $490.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding Magnetic Indices
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere
- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data

I think I have seen this answered long ago, but ---
Can anyone tell me what (permission) is required for a Canadian (or American)
amateur to operate in Germany.
I am only interested in 2 meters, for 1 week, and I am aware of the 1750Hz
tone to turn on the repeaters.
Thanks for any info.
Meyer.

Well, here I go again, I've been looking for this information for some time now and hopefully SOMEONE has SOMETHING.

I have a few Novatel model 8305A cellular phones that I wish to convert over to 900MHz. They are black, square, about 10" x 10" x 2".

At the very least I need a schematic, but full service information would be nice too. I understand that there was a Novatel Amateur Radio Club at one time and they did just this, converted them over to 900MHz for packet.

Any info would be appreciated and I of course will pay costs of copying and shipping if necessary.

Please reply via e-mail... ka1kjz@ix.netcom.com

I overstated my case and shouldn't have used the word "robust".
I meant it's the simplest method and can be accomplished with simple
gear. I will however admit my mistakes and wish to thank the many
folks who took the time to respond here and by E-mail. All of your
comments are most welcome... (I learn SO much this way!).
My apologies if I stepped on anyone's toes or angered anyone; That
was not my intention. I will look at all of the references given to
study further. (head bowed, tail between legs)

1013. KPIG Radio will be on the air January 21st

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-18 00:00:00 UTC
From: nobody@REPLAY.COM
Message-ID: <4dmes4$eis@utopia.hacktic.nl>
Source record: 232073

```
**********************************************************************
* The San Francisco Bay Area's most powerful pirate radio station *
* *
* K P I G -- 88.9 on your FM dial *
* *
* p r e s e n t s *
* *
* An evening of exposes *
**********************************************************************

This month's broadcast will begin at 10:00 PM this Sunday, January
21st. Highlights include:

Scientology Expose:

o Hear the "secret" documents the Church of Scientology is trying to
suppress.
o Learn what L. Ron Hubbard said about Scientology just before he died
(see page 47).

PETA Expose:

o Hear PETA members torture innocent animals while making a propoganda
film.

Amateur Radio Expose:

o Learn why Ham Radio has outlived its useful purpose and is now taking
valuable spectrum away from the public in order to allow drunk radio
amateurs the ability to use their overpriced CBs to chat with themselves.

With over 300 watts ERP, we are the most powerful pirate radio station
in the San Francisco Bay Area. We have as much or more power than many
smaller commercial stations in this area. It should be possible to
hear us all along the Penninsula and well into the South Bay. We
welcome reception reports and other listener feedback on the KPIG
Squeal Line. The phone number will be announced several times during
the broadcast.

Note to potential DF-ers. Our use of special ECM equipment will defeat
all known DF-ing techniques and will render it impossible for anyone to
locate the source of our signal. Save yourself some time and frustration
and stay at home.

>jimwills@ballistic.com

Hi All. I was poking around in the FCC's FTP site the other day and
found the new 610-V is available there for download. Point your
browser or FTP program to:

ftp://ftp.fcc.gov/pub/Forms/Form610V/610v.zip

The standard 610 is in its own directory as well as some other forms
that may be of interest to the group.

1016. Re: Blizzard of 96 - Amateur Radio NO PUBLICITY

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-18 00:00:00 UTC
From: dstock@hpqmdla.sqf.hp.com
Message-ID: <DLDGK4.Iv4@hpqmoea.sqf.hp.com>
Source record: 232076

Make some publicity?

How about the next time, get someone with a decent 4x4 mobile station to invite the local paper to send a journalist to accompany him on his relief activities - point out that in a vehicle with amateur radio on board, he'll be listening to the disaster control net and will know what's going on everywhere. Point out that cellphone bases can go out or simply be blocked by the numbers of calls, point out that skilled radio specialists can keep gear going, and make link ups far beyond what routine users can, and can provide comms when even the emergency services own systems prove inadequate.

When the search was on after the Pan-Am crash on Lockerbie, the police had UHF hand-helds only useable near towns, and long range radios mounted in low slung fast cars used for motorway patrol in the area - BMWs and their like are little use in fields and forests. No "official" radio system had failed, there was simply insuficient versatility. Amateurs proved able to create a system at the drop of a hat, including a repeater.

Cheers
David GM4ZNX

"Macnet Roster" (ver. 728) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

73,

Check out my Home Page for:

Which is why Morse code is used to communicate with deep space probes...

NOT!

Morse code is not the most robust mode of communication today. Morse code is an incoherent digital coding. Coherent coding methods offer a considerable improvement in robustness. There is such a thing as Coherent CW (CCW), which brings the advantage of a coherent mode to CW, but CW is not well suited to this; a conventional digital code is better.

Morse code is arguably more robust than other modes *done by hand*, but it is not the most robust mode. I don't have the URL here, but Phil Karn offers a web page demonstrating this. Use a search engine to find it; you'll be surprised.

From: ga19989@evax01.d51.lilly.com
Message-ID: <1996Jan18.121251.1@evax01.d51.lilly.com>
Source record: 232088
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Greg KO6TH brings up a recurring problem with my DJ-580.... the danged BNC connector gets really sloppy... of course, any BNC does this but the 580 seems to be worse than others... I made mine worse by hanging a BNC-to-SO239 transition and an SO239 (UHF) connector to the car's antenna coax so I can use the 580 as a mobile... I also got a remote mic so I could lock the HT down and not flex the antenna connection

Anybody solved the problem? Yeah, with the Alinco rubber duck there is no stress on the BNC connector.... but a rubber duck ain't that hot... and I did not see any easy way to replace the BNC

1029. HF-Propagation formulas/models ??

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-18 00:00:00 UTC
From: AGERSTL@pc.iu.hioslo.no
Message-ID: <4dlk1h$3us@dole.uninett.no>
Source record: 232089

Helo there, and thank you for reading this.

We are two students at Oslo College of Engineering that are trying to solve an obligatory project.

We are to write a program that is suposed to calculate MUF and LUF from our transmiting point, to various (any) point on the globe. We will only considder 3 - 30 MHz band.

Yes I know that there are zillions of things that affect this propagation, but we are mainly going consern ourselves with the Ionosphere, Sunspot numbers... etc. and not with such "details" as antenna gain-patern, and TX-power... etc.

What we need are such tings as:

Models for this calculations, such as CCIR, Minimuf... etc. and their mathematical models. We are unfortunately not able (time and brain considered..) to come up with tis formulas our selves.

It would be VERY nice if someone had some of this formulas for MUF & LUF stashed away in their drawer, and could send them over to us at our E-mail address. (See below)

Any working "HF-Propagation" softweare that we can inspect and compare results with. Again.... It would be VERY nice if we could in some way see / inspect the source-code to see how the h..#$!!!&#65533;ll they did the calculations.

This is an obligatory asignment for us, so PLEASE do help us! We need all the help we can get! We are planing on using Wisual-Basic 3.0 for the actual programing.

Here's the E-Mail address: (Use eather one)

agerstl@pc.iu.hioslo.no

I have a friend that want's to swap some equipment with me, and I'm trying to figure out if it's a fair deal, and am unfamiliar with the fair market value of the radio's that he want's to trade..

What's the fair market value on a Icom 290H all-mode 2 meter these day's and is it a decent radio?

or I can pick up a Keenwood TW4000 dualband, what's fair market on this radio, and also is it a decent rig?

Thanks for any advise/comments!

Mark

i have a problem with domestic US stations (where there's something like 700,000 of us..) crying about the cost of return postage for a postcard to another domestic destination.

for you, i would either go direct with return materials enclosed or via the bureau. either way, this minimizes the impact of the cost of QSLing on you.

I guess if we really wanted to make the people who want the cards pay..everyone would release a PS file to some QSL server and then the guy wanting the card would download the data for viewing/printing. The awards guys would never buy off on it tho.

I happily and use everyday the famous $350 SONY ICF-2010, and just bought the $60 Radio Shack DX-395 shortwave radios.
They are both digital, btw. I tuned to 4950 on the cheaper Radio Shack, and also did the same on the SONY. There was NO SIGNAL on the SONY where the radio shack had a clear reception! That's the ONLY example where the RS model outperforms the SONY, but WHY even that? I tried all prossible configurations. Either or both off, not plugged into AC, int/ext antennae. I just don't get it. Am I missing a lot on my otherwise beautiful SONY unit?

btw, I do understand a good bit. I have an advanced ham license (N4WEU).

PLEASE TRY TO EMAIL ME INSTEAD OF POSTING A RESONSE

Hi there!
I am staying in the US for a couple of months and so I applied for the guestlicense.
No Problem to get it, but the FCC didn't tell me which Prefix or Suffix I need to use
in addition to my own call sign.
Is anybody out there, who can give me a hint?
By the way, I am operating from Wheeling, Illinois.
Thanks

I am upgrading my old 386dx40 system to a Pentium system. In the
process
I have many usefull parts to try to peddle. The items are listed below
and priced to go fast. They will be sold first come first serve.
Get back to me fast or make offer if only kinda interested.

1 meg 32 pin simms $20 each Have 4

IO card providing 2 com ports $3

80mb scsi hard drive as is $7 1 meg segment on hd is bad, but I
just partitioned it off and use the other 79 no problem.

Samsung data monitor, color cga with vga adaptor plug $15

XT computer only no monitor or keyboard all else there.$18 or make
offer!!!!!!

SCSI controller cable. 3 feet or so long. $3 ($5 to $15 new)

brand new dual floppy drive. 5 1/4 and 3 1/2. Fits in 5 1/4 size bay
Just one floppy sells for$45new. This went $120 new asking $55

2 working printers. Both have manuals and work fine.
Toshiba Expresswriter 420
Star SG 15

I will sell them for $40 each or both for $70

Also have

D104 microphone $30
40ch Pierce Simpson cb mobile set $15
several 23 channel cb mobile sets $7

This is really pretty funny! To an experienced DF'er, turning on a radio transmitter is about the same as turning on a flashlight in a dark room - in other words, not too hard to find. Now, after infuriating hams by suggesting they are "taking away public spectrum" (um, hams are the public aren't they? Its pretty much the only publically accessible chunk of the radio spectrum), nice way to bait the DF teams! I find the challenge hilarious - too bad I don't live in the Bay area!

Good luck folks - have at 'em!

Since Illinois is in the 9 call area, you should be ok using W9/DL3ECA or K9/DL3ECA, or N3/DL3ECA, since all three prefixes are good. I hear DL's operating here every so often by prefixing (or suffixing) their call with KH6. I believe the general rule is to prefix, but Ihave heard it both ways.

1041. FS: KPC-2 Packet Controller

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: "Robert J. Hall" <rjhall@mtu.edu>
Message-ID: <Pine.SUN.3.91.960119020413.23835B-100000@techsrv1.tech.mtu.edu>
Source record: 231952
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

Hello .. I have decided to sell my KPC-2 Packet radio TNC and
Regency BTH-201B 25 Watt VHF Tranceiver crystalled to 145.01 MHZ.

I am asking $100 for the KPC-2 ALONE.
The KPC-2 With the REGENCY BTH-201B radio I am asking $170.
I will also be asking $5 for Shipping.

The Regency base station is all ready to go and is Currently wired and
working well with the KPC-2. The base station has it's own built in
Power supply. Regency BTH-201B 25 Watt VHF Tranceiver crystalled to
145.01 MHZ.

I am not interested in selling the radio seperate from the TNC, but would
be interested in selling the TNC alone. If I don't sell them I'll
continue to use them, and If I don't sell the radio with it, I'll crystal
it for voice and use it there.

The KPC-2 has version 2.85 firmware and has PBBS, NODE, and DIGI
functions. It's run well for the last 4 years without ever having a
problem. It originally cost $170. I orginally purchased the Regency
about 2 years ago from a friend for $60 and recrystaled and tuned it for
another $30 from Jan Crystals. It works well and also has never given me
any problems.

I don't normally have time to monitor the news groups so any response to
this should be via e-mail or phone listed below.

Jim,

I think we had the "same" experience with Plessey, that's why when
we were looking for a state of the art bipolar foundry for a new RF
chip design, Plessey wasn't considered even though they have one of the
best high frequency bipolar processes available.

1046. Antenna and coax grounding?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: bscott@pla-net.net
Message-ID: <4dol64$1qt@thor.pla-net.net>
Source record: 231957

I have a problem here in the shack, that is difficult to describe, and I don't know how to solve it.
I have 6 runs of 8214 coax, each 130 feet long, going from the shack out to the 40' tower. Antennas include Moseley TA-33, Hustler G-6/270, Cushcraft 2 meter beam, Ringo resistor for packet, and 40 & 80 meter inverted V's. All antennas are resonant for the appropriate band. The HF rig is an FT-990, packet is an FT-2500m, and UHF/VHF is an Alinco DR-590. The trouble is that the coax and/or antennas are providing a ground. I have a deep-cycle battery for backup and can hook the positive lead from any of the radios to the battery, and when I connect the coax to the radio, it will complete the circuit, and the radio will come on. The battery is isolated from everything else, including home A/C. Hooking to one of 3 power supplies will yield the same results. This is with the negative radio lead just dangling in the breeze! The tower is grounded properly with 3 10' ground rods around the perimeter. The shack is grounded by a 10' ground rod with an 8' piece of welding cable connecting the ground rod to the buss bar I made for grounding. All coax is new and there are no shorts in the coax (braid to center). This does not affect the SWR, but it does seem to be providing RF feed-back. Any ideas are greatly appreciated, as I have no answers to this, nor do any of our local hams. If the answer is lengthy, please respond by E-mail if need be to bscott@pla-net.net
Thanks so much for your time. 73 de Bob

73 and thank you. Bob

Im having a background spark ignition nosie problem that is interfering with weak signal reception on 2 meters. I have insured everything is chassis grounded properly, radio, antenna, and neg side of DC power cables. My radio DC power is fed direct from the battery terminals, and I have wrapped the DC power cable in aluminum foil. I have also added iron toriod cores to the spark plug wires, both at the distributor and plug ends. I have changed the distributor cap, rotor, and plugs, and the plug wires all appear to be in good visual physical shape (not dry rotted or cracked).

What else can I try, short of running the vehical off a cliff?

1049. GB2RS News 21st January 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <822102400snx@llondel.demon.co.uk>
Source record: 231960
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 21st of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Lincoln Short Wave Club, which was formed as the Lincoln Wireless and Scientific Society in 1921, is celebrating its 75th anniversary on Saturday the 10th of February. The committee is looking for former members of the club to help celebrate with an exhibition and special event station at the Lawn Complex, Lincoln, from 12 noon until 5.00 pm. In the evening there will be a celebratory dinner. The day's events will be opened jointly by the Mayor of Lincoln, Councillor Geoff Ellis, and RSGB President Peter Sheppard, G4EJP. The Lincoln Short Wave Club will be changing venue for its regular club meetings. For further details on the 75th anniversary celebrations or the new venue, please contact John Middleton, G8VGF, on 01522 525760.

The Mendip Repeater Group introduced a new membership category for Novices, with a lower annual subscription, at its recent AGM. For more details please contact Pam, G7SPW, at P O Box 73, Wells, Somerset.

A new 50 MHz GB2RS news broadcast serving Central Scotland starts on Sunday the 4th of February at 11.30 am. Initially, it will be for an experimental period of three months but will be continued if it proves to be a success. The transmission will be from the station of Tom Menzies, GM1GEQ, and will be on 51.530 MHz with vertical polarisation. Reports will be welcome, and should be sent to GM1GEQ via the RSGB QSL bureau.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Barbados, VE3ICR will sign 8P9DX from Saturday the 20th of January until the 3rd of February. Activity will be mainly CW on the LF bands.

From Dominica, an American group is planning activity as J77A from Saturday the 20th until Thursday the 25th of January. Operation will be on all bands from 10 to 160 metres, including the WARC bands, on CW, SSB, RTTY and the RS-12 satellite, but with the emphasis on RTTY and 80 and 160 metres CW.

And the Dateline DX Association's planned operation from Wake Island as AL7EL/KH9 has been postponed by one week due to transportation difficulties. The new dates for the operation are the 1st to 7th of February. This DXpedition will also emphasise 80 and 160 metre operation.

Next the Rally News:

The Oldham Amateur Radio Club Mobile Rally is taking place today, the 21st of January, at the Queen Elizabeth Hall, Civic Centre, West Street, in Oldham. The event features the usual traders and a bring and buy stall. Morse tests will also be available on demand. Doors open at 11.00 am, or 10.30 am for disabled visitors, and talk-in is on 2 metres channel S22.

The Fenland Repeater Group and Lincolnshire Packet Group are holding a "Mid-winter Rally" next Sunday, the 28th of January, at the Youth Club, in Horncastle, Lincolnshire. The event starts at 10.00 am and further details may be obtained from G0PXB on 01526 860320.

And now a date for your diary:

The RSGB National VHF Convention takes place at the usual venue - Sandown Park in Surrey - on Sunday the 18th of February. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show and special interest groups. Full details will be published in the February edition of Radio Communication, which is due to be posted to all RSGB members this week.

Now for the HF contest news:

An 80 metre session of the LF Cumulative CW Contest takes place today, Sunday the 21st of January, between 1600 and 1800 UTC. A 160m session is on Wednesday evening, the 24th, between 2000 and 2200; another 80 metre session takes place next Saturday the 27th, whilst a 40 metre session takes place next Sunday, the 28th. The rules were published in last September's RadCom, but please note that the dates were given incorrectly in September. The correct dates are shown in the January RadCom.

The CQ World Wide 160 metre CW Contest takes place next weekend. Brief rules appear on page 23 of the January RadCom, but please note that the contest starts at 2200 UTC on Friday night, the 26th of January, and ends at 1600 UTC on Sunday the 28th of January. In last year's contest, G3ZEM was the world's leading station in the multi-operator section.

The Worked All Britain 160 metre Contest takes place on Saturday the 27th of January between 1900 and 2300 hours. Contest rules are available from the new WAB Awards Manager, Kate Wragg, G0FEZ, whose address is correct in the RSGB Call Book.

Next some VHF contest news:

The first of five sessions in the RSGB 70 MHz Cumulative Contest takes place today, the 21st. The second session is next Sunday, the 28th of January and the rules can be found in last September's RadCom.

And now the solar factual data:

The period from the 8th to the 14th of January saw solar activity at very low levels and the geomagnetic field increase to active levels.

Sunspot numbers declined from 53 on the 8th until the 10th when the solar disc became spotless. The mean for the period was 27. Solar flux levels also declined, from 79 units on the 8th, to 69 units by the 13th. The average was 73. No solar fares were reported. Electron fluence remained at moderate levels, whilst X-Ray flux declined from A3.6 units on the 8th, to A1.0 units by the 12th, and then remained at that level. The average was A2.6 units. The 90-day solar flux average on the 14th was 75 units, one unit down on last week.

Geomagnetic activity started the period at very quiet levels with an Ap index of only 1 unit on the 9th and the 10th. Activity increased during the morning of the 13th, with periods of major storm conditions observed at middle to high latitudes. The daily Ap index on the 13th was 35 units. Levels declined slightly on the 14th, with an Ap index of 23, and the average was Ap 10 units. The aa indices, as supplied by the British Geological Survey for the period from the 2nd to the 8th of January, saw levels between quiet and unsettled. Levels were down to only 8.5 nanoTeslas on the 8th, with an average of 13.6 nanoTeslas.

I'll repeat the figures: spots - 27, flux - 73, Ap index - 10, X-Ray flux - A2.6.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 5th to the 11th of January, averaged 6.2MHz and varied little day to day. The darkness hour lows showed some improvement, and increased from 2.5MHz on the 6th, to 3.4MHz on the 8th, with an average of 2.9MHz. The daytime highs took place between 1000 and 1500, with the darkness hour lows between 1900 and 0700 hours.

I'll repeat the figures: highs - 6.2MHz, lows - 2.9MHz.

And lastly the solar forecast.

This week the slightly more active side of the sun will be rotating into view and therefore solar flux levels are expected to increase to the mid 70s. Solar activity is expected to remain at very low levels. Geomagnetic activity is expected to be at unsettled to active levels today and tomorrow, but then decline to quiet levels for the remainder of the week. Ionospheric MUFs for the south during daylight hours are expected to be about 18MHz, and for the north about 15MHz. The darkness hour lows are expected to be about 7MHz. HF band conditions could well show some improvement in the second half of the week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Uniform and G7 Victor Zulu series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Quebec series.

I'm still looking for a schematic or whole manual for an old
Clegg FM-27B, which was one of the first 'synthesized' 2 meter
FM transceivers. It was manufactured about 1971-1973.

Any tibits, remembrances, problems, etc. would also be appreciated
as I am putting together an article on restoring early solid-state
ham gear.

Please email to 'rreames@ix.netcom.com' or 'randy@aztek.com'.

Thanks
Randy Reames

Erickson GE Monogram Commercial 40 Watt FM Mobile For Sale.
Very Rugged up to 16 channel EPROM progamable.
Frequency Range 136 Mhz - 174 Mhz
All options Duplex, tones, scan, etc.
Currently has 16 Marine channels programmed:
6,8,9,11,12,15,16,18,20,22A,68,69,70,72,79,80A.
Perfect for small business in need of a high quality mobile to communicate
with base or for pleasure boater who requires these already programmed
frequencies.

Asking $300 cdn (current US Exchange is aprox 36% in your favour)

open to offers of trade for Amateur equipment, like 2M mobile, 6m Mobile,
HF mobile, etc.

>Good luck on avoiding it!

Actually, in most cases you can reduce the amount of interference considerably by installing a high-pass filter and/or common-mode choke on the TV set. If the TV horizontal-oscillator harmonics are being coupled *into* the antenna leads, the high-pass filter will keep them confined to the TV, rather than letting them get onto the TV antenna, where they will be more efficiently radiated.

If the harmonics are being coupled onto the chassis of the TV, or onto the shield of the TV's coaxial input, then a common-mode choke, made by winding about 10-15 turns of the TV's coaxial cable onto an FT-240-43 ferrite core (Amidon, Palomar, etc.) will choke it off pretty nicely, again confining the harmonics to the TV rather than putting them on the long-wire antenna formed by the outside of the shield of the TV's coax.

In cases where the TV is connected to a cable system, in almost all instances, the problem is a common-mode problem (because even if horizontal-frequency harmonics are coupled *into* the cable, they would not be radiated unless there is also a significant cable leak). Even for antenna-connected TVs, especially if they have a 75-ohm feedline, I would try the common-mode choke first. For cable-connected TVs, a high-pass filter is almost never needed, in cases of interference from, or to, the TV set.

Where can one get Morse Code capabile 49 MHz walkie-talkies?

Unlike my good friend rfm@eng.sun.com, I think turning kids on to Morse as a fun "secret language" is a cool idea. I just don't think it should be mandatory for adults.

73, doug

SB PROP @ ARL $ARLP003
ARLP003 Propagation de KT7H

ZCZC AP24
QST de W1AW
Propagation Forecast Bulletin 3 ARLP003
From Tad Cook, KT7H
Seattle, WA January 19, 1996
To all radio amateurs

SB PROP ARL ARLP003
ARLP003 Propagation de KT7H

Solar activity is extremely low. On six of the past seven days there were no visible sunspots, and every day the solar flux was below the average flux number for the previous 90 days. As we are near the bottom of the solar cycle, don't expect much change. For the next year we should see many more periods with no sunspots.

For the next few weeks there should be little activity, except for a possible coronal hole causing geomagnetic disturbances a few days from now.

Sunspot Numbers for January 11 through 17 were 0, 0, 0, 0, 0, 0 and 11, with a mean of 1.6. 10.7 cm flux was 71.5, 69.5, 69, 69.7, 70.2, 69.9 and 70.4, with a mean of 70.

This week we have a path projection to Guatemala from Eugene, Oregon, New Orleans, Louisiana and Pittsburgh, Pennsylvania.

From Eugene 80 meters should be open from 0030z to 1330z, 40 meters from 2230z to 1330z, 30 meters from 1630z to 0100z, 20 meters from 1600z to 2300z, and 17 meters from 1900z to 2130z.

From New Orleans check 80 meters from 2200z to 1430z. 40 meters should be open around the clock, with the best period from 0000z to 0200z and again from 0400 to 0500z and the worst from 1700z to 1900z. 30 meters should be good from 1330z to 0000z and 20 meters from 1500z to 2200z. 17 meters should be open most days from 1700z to 2000z.

From Pittsburgh 80 meters should be open from 2230z to 1300z and 40 meters around the clock, with the strongest signals from 0030z to 1130z. 30 meters looks good from 0800z to 0430z, 20 meters from 1400z to 1900z and 2130z to 2300z, and 17 meters from 1500z to 2100z. 15 meters looks good from 1600z to 2000z.

1056. Re: Alert: FCC Wants to TAX the Internet

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: fgoldstein@bbn.com
Message-ID: <fgoldstein.255.0042373A@bbn.com>
Source record: 231967

In article <30fdacf2.1778398@199.3.25.5> gbaron@sparc.isl.net (Gilbert Baron) writes:

>Don't pay attention to this un thought out post. The phone companies
>are in no danger whatsoever. The internet will never be able to carry
>even close to the traffic that the phone companies can carry. This
>method is not and never will be close to the telephone system in
>quality and reliability. The FCC has no taxing power either. This is
>flame bait pure and simple.

I'm a semi-official Snuffer-Outer-of-the-Modem-Tax-Internet-Chain-Letter.
I've been snuffing it out since 1988 or so, back when somebody allegedly heard
somebody call the Jim Eason show on KGO to say that he heardf from a friend
that the New York Times had an article... you get the picture!

In this particular case, there's a *little* smouldering behind the smoke. An
FCC dweeb, whose name escapes me, made a comment to somebody in public that
"Internet Phone" software could be a justification for treating Internet
providers differently. Right now they're *users* of the phone network. The
so-called "modem tax" was to treat all sorts of on-line (voice or data)
applcations as *long distance companies* subject to around a nickel a minute
in extra payments *to the phone companies*.

There is *no* pending proceeding at the FCC around this. However, some people
there have been chomping at the bit *for years* for an excuse to reclassify
value-added services and ISPs as long distance carriers, instead of as users.
I-phone is a lousy excuse (CB-quality audio at best, no real capacity). It is
prudent to keep an eye on the FCC, but not to panic or spread false rumors.

This however is not a "tax". The gummint doesn't get the money. Telephone
companies would. They make their profits on the 3-5c/minute/side fees paid to
them by long distance companies. Classifying users as LD companies would be a
huge rate increase. Congress last time around made clear they shouldn't do
it, but with the Newtrons now in charge, anything could happen there.

==========

Major "Real-World" Bugging Frequencies

Common Wireless Bugs (Low Power - Well under 35-50 mw)

44.500 - 51.000 mhz "Baby/Room" monitors
72.100 - 75.400 mhz Hearing Assistance systems
54.000 - 150.000 mhz "Kit" Bugs

98.000 - 108.000 mhz Cheap out-of-band FM Bugs
112.000 - 142.000 mhz Cheap out-of-band FM Bugs
140.000 - 160.000 mhz Cheap out-of-band FM Bugs

60.000 - 320.000 mhz Low Cost kit bugs
398.000 - 406.000 mhz DECO Bugs (398.600/605, 399.450/455, 399.025/030, 406mhz)
25.000 - 450.000 mhz European/English Kit Bugs

150.000 - 216.000 mhz Typical VHF "Body Wire" & Pro-Grade Bugs
109.000 - 140.000 mhz Digital VHF Pro-Grade Bugs
138.000 - 174.000 mhz Typical "Spy Shop" & LE Cheap VHF Bugs (155-172 Popular)
140.000 - 150.000 mhz Popular Xandi Flea power kits (143/144mhz)
150.000 - 170.000 mhz Popular Japanese Flea power kits (under 5mw)

150.000 - 220.000 mhz Commercial Wireless Microphones
169.000 - 172.000 mhz 47 CFR 90.265 Authorization *** VERY Popular ***
174.000 - 216.000 mhz 47 CFR 2.106 (NG115) Authorization
395.000 - 410.000 mhz German UHF Wireless Microphones (PK Electronics)
219.000 - 530.000 mhz English UHF Wireless Microphones (300-500 popular)
470.000 - 608.000 mhz Commercial Wireless Microphones
730.000 - 806.000 mhz Commercial Wireless Microphones

889.000 - 960.000 mhz Modified Cordless Phones (S/S & Hoppers)

380.000 - 480.000 mhz Video Bugs - US
890.000 - 960.000 mhz Video Bugs - US (902-928 Hot)
905.000 - 928.000 mhz Video/Audio Consumer Products (i.e.: Recoton)

1.700 - 1.930 ghz Video Bugs - US
2.400 - 2.500 ghz Video Bugs - US *** VERY Popular ***
5.725 - 5.850 ghz Video Bugs - US *** VERY Popular ***

1.100 - 1.400 ghz PAL Video Bugs *Very Hot in
England/France/etc*
2.400 - 2.500 ghz PAL Video Bugs *Very Hot in
England/France/etc*
3.500 - 4.500 ghz PAL Video Bugs *Very Hot in
England/France/etc*

430 - 550 mhz Popular French Video/Audio Bugging System
950 - 2500 mhz Popular French Video/Audio Bugging System
700 - 900 mhz Popular Italian Audio Bugging System

"Tactical" Bugs

225 - 400 mhz "Throw away" bugs (10uw-300mw Beer can bugs)
290 - 330 mhz Micro-powered Bugs (5uw-10mw Cigarette Butt Bugs)

30 - 500 mhz Tactical Repeaters (75mw-300mw)
285 - 400 mhz Tactical Repeaters (50mw-10watts)
100 - 152 mhz VHF Tactical Repeaters (300mw-25watts)
135 - 174 mhz VHF Tactical Repeaters (300mw-25watts)

VLF and Carrier Current Type Bugs

9khz - 490 khz Carrier Current 47 CFR 15.219 Auth (250 microvolts)
490khz - 1.705 mhz Lossy Cable 47 CFR 15.221 Auth (1000 microvolts)
450khz - 30.00 mhz PLA Systems 47 CFR 15.207 Auth (30 mv@ft/30ft)

3 - 200 khz 300 mw High Grade Pro Bugs (over 500$ each)
100 - 200 khz 50-100 mw Older Bugs
120 - 200 khz 30-50 mw Pre 1990 intercoms
200 - 300 khz 30-50 mw Post 1990 intercoms
300 - 400 khz 250-400 mw TELCO Line transmitters (355khz popular)

300hz - 30 khz Cable TV Carrier - Hardwired microphones
30khz -300 khz Cable TV Carrier - Coaxial Bugs

100 - 450 khz Threat Window #1 Most CC Bugs
3khz - 3 mhz Threat Window #2 Expensive "Pro-Grade" Bugs
5khz - 32 mhz Threat Window #3 Popular WJ Carrier Current Rcvr
3khz - 50 mhz Threat Window #4 Realistic Threat Window for Telephone Wire
15mhz - 70 mhz Threat Window #5 Audio/Video "Micro-Wire" RF circuits

WECO Bugs "boosted/ultrasonic audio" found on Power/CATV/Telco lines

64kbps to 1.5mbps Digital Bugs T-Carrier-Lo (T-1 and Below)
1.5mbps to 50mbps Digital Bugs T-Carrier-Hi (T-1 and above)

2.048mbps Digital Bugs Definity Circuit Pack Bug
32mbps Digital Bugs TMS Channel/Backplane bridge
Designed to transmit on CC or Microwave ISM Spread Spectrum (2.4-6.0ghz)

VLF Devices

25khz - 90khz Tape Recorder Bias Osc-Low End (35-45khz Common)
80khz - 145khz Tape Recorder Bias Osc-Mid Range (88.2, 96, 100khz Common)
100khz - 325khz Tape Recorder Bias Osc-Pro Grade (100, 150, 300khz Common)
40khz - 50khz Tape Recorder DAT/Hi8 (44.1/48khz Common)

8khz - 35khz Recorder Audio Servo Noise (10-20khz Common)

7khz - 35khz Video Camera VLF Detectable emmisions
15.750 mhz Common NTSC Video Camera
15.734 mhz CCD/PCB Video Camera (very easy to detect)
15.625 mhz Common Video Camera

Also, be aware of ultrasonic/audio emmisions from most VLF devices.
(Utilize a EOD/Bomb Tech Stethoscope, and Ultrasonic Spectrum Analyser)

Spread Spectrum/Hopping Bugging Frequencies

Legit Industrial Equipment (very inexpensive)
902 mhz - 928 mhz ISM band A (Very Popular)
2400 mhz - 2484 mhz ISM band B (Very Popular)
5725 mhz - 5850 mhz ISM band C
10500 mhz - 10550 mhz ISM band D
24075 mhz - 24250 mhz ISM band E

SS Amateur Radio Bands Often used for eavesdropping (very inexpensive)
50 mhz - 54 mhz 6.00m Amateur Radio Equipment (STA)
144 mhz - 148 mhz 2.00m Amateur Radio Equipment (STA)
222 mhz - 225 mhz 1.25m Amateur Radio Equipment (STA)
420 mhz - 450 mhz 70cm Amateur Radio Equipment (47 USC 97.305)
902 mhz - 928 mhz 33cm Amateur Radio Equipment (47 USC 97.305)
1240 mhz - 1300 mhz 23cm Amateur Radio Equipment (47 USC 97.305)
2300 mhz - 2450 mhz 13cm Amateur Radio Equipment (47 USC 97.305)
3300 mhz - 3500 mhz 9cm Amateur Radio Equipment (47 USC 97.305)
5650 mhz - 5925 mhz 5cm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Occasionally used for eavesdropping
10.00 ghz - 10.50 ghz 3.0cm Amateur Radio Equipment (47 USC 97.305)
24.00 ghz - 24.25 ghz 1.2cm Amateur Radio Equipment (47 USC 97.305)
47.00 ghz - 47.20 ghz 6.0mm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Rarely used for eavesdropping (very expensive)
75.50 ghz - 81.00 ghz 4.0mm Amateur Radio Equipment (47 USC 97.305)
119.98 ghz - 120.02 ghz 2.5mm Amateur Radio Equipment (47 USC 97.305)
142.00 ghz - 149.00 ghz 2.0mm Amateur Radio Equipment (47 USC 97.305)
241.00 ghz - 250.00 ghz 1.0mm Amateur Radio Equipment (47 USC 97.305)
300.00 ghz - Light (3 Thz) Amateur Radio Equipment (47 USC 97.305)

Note: Most commmon spread spectrum/hopping bugging equipment will
hop at speeds
between 100 and 50,000 hops per second. Equipment is readily
available that
hops even faster (100,000 to 300,000 hops per second). Dwell times
can be as small as 1us (one widely used military system uses a dwell
time of 3-5us)

Outband Equipment
ANY Television broadcast or Cable TV frequency
ANY FM radio broadcast frequency
ANY Paging or Beeper frequency
ANY Cellular Telephone frequency

820 mhz - 960 mhz Modified (902-928) Cordless Telephones
Modified Amateur Radio Equipment (can be on ANY frequency)

Keep in mind that wideband (non-ISM) Spread Spectrum/Hopping Bugs
are very
difficult to detect(even if you are within a few feet). Watch for carrier
feed-through, and "Noise Floor Humps".

All Spread Spectrum devices are detectable

Once Spread Spectrum/Hopping Bugs have been located (on the RF
spectrum) all
that can be done is to locate the sourse of the emission... it is
virtually
impossible to demodulate a SS signal unless you have access to the key.

Also, a 500mw ISM device can easily have an effective range of over
20 miles.

Look for spectral anomalies (humps) on the Spectrum Analyzer, and
back up
with a Compressive receiver.

Commonly Used Law Enforcement Bugging Frequencies

37.000 - 952 mhz FCC Surveillance Blanket Authorization

47 CFR 90.19 "Physical surveillance, stakeouts, raids..."
Straight AM/FM, FM-Subcarrier, SSB, Spread Spectrum, and Hoppers.
If encrypted, it usually uses in-band voice inversion or DES.
(Normally well under 2 watts... most under 35-150mw)

148 - 174 mhz
135 - 250 mhz Out-band Wireless Microphone
174 - 216 mhz In-band Wireless Microphone
350 - 440 mhz Common Video Freqs
380 - 930 mhz Wide Band Hoppers
806 - 824 mhz
851 - 869 mhz
905 - 930 mhz Popular Audio/Video Band

1.4 - 1.5 ghz Common Video Freqs
1.7 - 1.9 ghz Common Video Freqs (1.710 - 1.755 REAL Popular at
1/10 watt)
2.4 - 2.5 ghz Common Video Freqs (2.400 - 2.450 REAL Popular)
5.7 - 5.9 ghz Common Video Freqs (5.725 - 5.850 REAL Popular)
8.5 - 10.8 ghz Common Video Freqs

173.075 - LOJACK Auto tracking system beacon (200ms burst every second)

Police Speed Enforcement Radar
10.450 - 10.600 ghz X-Band
11.488 - 11.628 ghz RD Detector
22.976 - 23.256 ghz RD Detector-2nd Harmonic
24.050 - 24.250 ghz X-Band
33.400 - 36.000 ghz Ka-Band
700nm - 1100nm Laser Threat

Electronic Article Suveillance/Anti-Shoplifting Systems
8.10mhz - 9.30mhz Checkpoint (Hi-Q Tags) 8.2mhz Common
57.75khz - 58.75khz Sensormatic (Magnetic) Books, CDs, and Tapes
915mhz and 1830mhz Knogo (Microwave Resonant) Adhesive Labels

25 - 50 mhz "Bumper Beepers" (38 - 47 mhz very popular)
135 - 170 mhz "Bumper Beepers" (150-170 mhz very popular)
450 - 512 mhz "Bumper Beepers"
903 - 904 mhz "Bumper Beepers"
904 - 912 mhz "Bumper Beepers"
918 - 926 mhz "Bumper Beepers"
926 - 927 mhz "Bumper Beepers"

WARNING:
The area between 900 mhz and 6 ghz is EXTREMELY DANGEROUS as
the eavesdropping equipment in that range is inexpensive, low power,
and highly directional.

Additionally, most TSCM people will not check frequencies above
1.0/1.5 ghz or
3 ghz (because the equipment is too expensive for them to buy).

I have seen surveillance video tapes of TSCM inspections where the video
cameras (Watec), microphones (Sony), and microwave RF transmitters (AID -
2.4ghz) were never detected by the inspectors (using 1ghz AVCOM Spectrum
Analyzers).

Surveillance Satellite (TK-Keyhole) Frequencies
Note: Mostly Wideband Spread Spectrum/LPI channels

420mhz - 450mhz
1.2ghz - 1.4ghz
1.7ghz - 1.9ghz (1.76-1.84 real active)
1.9ghz - 2.2ghz (2.115 real active)
4.9ghz - 5.0ghz
7.5ghz - 8.3ghz
10.6ghz - 12.6ghz (11.7-12.2 active)

23.6ghz - 24.0ghz
25.5ghz - 25.7ghz
22.8ghz - 33.5ghz
42.5ghz - 47.0ghz
50.3ghz - 52.4ghz
78.0ghz - 85.5ghz
86.3ghz - 98.3ghz (86-92 real active)

Commonly Used by Federal Agencies for Bugs, Wireless Microphones,
and Body Wires (also 138-220 mhz, and 399-420 mhz, under 25-50 mw).

408.5000 Secret Service
408.9750 Secret Service

172.2000 DOJ/DEA CH.1
171.6000 DOJ/DEA CH.2
418.0500 DEA Low Power
418.0750 DEA Low Power
418.5750 DEA Low Power
418.7500 DEA
418.6750 DEA
418.9000 DEA F2 CINDY (416.325) Surveillance
418.7500 DEA F3 GAIL Surveillance/Strike Force
418.6750 DEA F4 EMILY (416.325) Surveillance

407.8000 CIA, State Department
408.0500 Federal Shared
408.5750 Federal Shared

409.4000 Federal Shared

960-1215mhz Spread Spectrum Systems (Wideband)

Generally Recognized Federal Bug/Spy Bands
Primary - 25-50mhz, 135-175mhz, 225-440mhz, 1710-1950mhz, 8.3-12.5ghz
Secondary - 890mhz-5.50ghz, 7.0-9.5ghz, 10-39.6ghz

Also, Wide Band Frequency Hopping centered on various UHF-TV channels
(ie: 510 or 670 mhz with a hopping width of +/- 25 mhz)

Keep in mind that the federal government can use virtually any
frequency between DC and light.

Band Width Resolution and Filters

Examine the spectrum with the following BW resolutions/filters:

Utilize all BW resolutions/filters between 5hz - 200mhz (depending
on band being checked)

Note: A programmable digital spectrum analyzer should be used!
(1/3/5/10/15/20/25/30/50/75/100/150/200... Sequence is prefered)

BW Res - Usage/Primary Function
100/200 mhz - Resonate Cavity Bugging Devices/SIGINT Devices
125/35/8mhz - Resonate Cavity Bugging Devices/SIGINT Devices

50/20/10mhz - Diplomatic/Intelligence Microwave Bugs
40/20/10mhz - Diplomatic/Intelligence Microwave Bugs

13/16/20mhz - Microwave Wideband
11/12/13mhz - Microwave Wideband
.5/1/2/5mhz - Microwave Wideband (Burst Bugs)
18/26/36mhz - Satellite Wideband (Video)
2/4/6/8 mhz - Microwave Wideband (Video)
3/6/12 mhz - Microwave Wideband (Video) - Common
.5/1/3 mhz - Microwave Wideband (Video/Burst/Pulse)

1.5/.75 khz - Frequency Hopping Bugs - VERY Common
.4/.2/.1khz - Frequency Hopping Bugs - VERY Common
3.2/6.4 khz - Frequency Hopping Bugs - VERY Common
10/20/25khz - Frequency Hopping Bugs - VERY Common
50/75 khz - Frequency Hopping Bugs - VERY Common
100/250 khz - Frequency Hopping Bugs
300/500 khz - Frequency Hopping Bugs
1/2/4/8 mhz - Frequency Hopping Bugs

300/250 khz - Regular Wide Band Broadcast FM
150 khz - Narrowband Broadcast FM Audio, Television Audio
280 khz - Narrowband Broadcast FM Audio, Television Audio

200/150 khz - Commercial Wireless Microphone - High Grade
150/100 khz - Commercial Wireless Microphone - Concert/Broadcast Grade
58/77/84khz - Commercial Wireless Microphone - Typical Body Wire

50/60/75khz - Commercial Wireless Microphone - Typical police device
8/25/50 khz - European/Japanese Industrial Bugging Devices

50/30 khz - Wideband FM two-way communications (ie: Cellular
Telephone)
16/15/6khz - Normal FM two-way communications
3/6/8/12khz - Narrowband Commercial - Voice
1/3.2/6khz - Narrowband (Marine, HF, etc...)

120/9/1 khz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/750/500hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
56/75/100hz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/150/200hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
250/300 hz - Narrowband (Bias Osc./Video Cameras/SIGINT)

300/250 hz - Narrowband OOK/FSK/Data, etc...
300/250 hz - Narrowband OOK/FSK/Data, etc...

Subcarrier Detection:

10 - 500 khz - Most Commonly Used Subcarriers
30 - 150 khz - Typical Broadcast FM Subcarrier (FMSubC)
19/27/38 khz - Typical Stereo Broadcast FM Subcarrier (FMSubC)
67 khz - Typical Musicast/Musak Broadcast FM Subcarrier (FMSubC)

2 - 10 mhz - Audio Subcarriers often used with Video (4.2-8 mhz
common)

5khz - 950khz - Realistic Subcarrier Threat (Audio)
1mhz - 15 mhz - Realistic Subcarrier Threat (Video)

Summary (this will catch 99.99% of all Non-Intell/Diplomatic RF bugs)

All TSCM Inspections should include the following frequencies:
(Expect to see less than 10-35 mw maximum at the TX antenna)
(Do not expect the signal to be present for more than 20uS-100uS)

To find RF transmitters a search grid of 15 foot by 15 foot (or
less) should be used.

Also, all phone rooms, riser closets, demarcs, boots, etc. MUST be
checked.

Remember that the microphone/camera can be hundreds of feet away
from the transmitter.

Use a digital spectrum analyzer and a wideband receiver with an analog
10.7/21.4mhz SDU on the IF, dispersions of 100/200/500khz).

RF Spectrum Analysis and monitoring should take place for at least
twelve
solid hours during a regular sweep (72 hours or more is preferred).

To prepare for IPM the spectrum should be evaluated/monitored for at
least four hours prior to the event.

Most non-gvt RF bugs will have a transmit frequency between 9khz
and 6ghz.

The Spectrum Analyzer inspection must cover at least 3khz to 40 ghz

VLF Detection-Audio .3 khz to 100 khz Video Cameras & Tape recorders
VLF Detection-RF 12 khz to 500 khz Video Cameras & Tape recorders
VLF Detection-Audio .3 khz to 150 khz Microphone/Ultrasonic
Chirping

Carrier Current Bugs 3 khz to 50 mhz 99% Voice

RF Bugs-HF 3 khz to 50 mhz 99% Voice
Space RF Bugs-VHF 30 mhz to 300 mhz 10% Video/80% Voice/10% Data
Space RF Bugs-UHF 300 mhz to 900 mhz 25% Video/60% Voice/15% Data

RF Bugs-Microwave1 900 mhz to 3.0 ghz 70% Video/20% Voice/10% Data
RF Bugs-Microwave2 3 ghz to 18.5 ghz 75% Video/15% Voice/10% Data
RF Bugs-Microwave3 18.5 ghz to 40.0 ghz 75% Video/ 5% Voice/20% Data

...and of Course Infrared! (Look for "IR Blooms")

700 - 1100nm Audio Transmitters/Lasers (CF between 880 and 950nm)
750 - 900nm Night Vision Illuminators
900 - 1710nm IR Video Illuminators

Note:
Most military/intelligence and governmental TSCM inspections look
for devices
between 3khz to 50mhz for Carrier Current, 20khz to 40ghz for
regular free
space RF radio devices, and directional microwave devices from
.5ghz to 120ghz.

>Where can one get Morse Code capabile 49 MHz walkie-talkies?

This brings up an interesting point. Back in the 70's, when "kiddie-talkies" were still using CB Channel 14, all but the cheapest models were equipped with "code keys" and the Morse alphabet printed on the case. These days, you hardly ever see one with a code key! In fact, I can't remember the last time I saw one!

Guess the kids aren't into 19th century communications techniques, either.

We just added another feature to our Web site.

It's called the Pre-70's Swap Shop. The idea is to
allow Ham operators looking for or wanting to sell
Pre 1970's Amateur Equipment of any kind... List
you old AM gear, looking for older SSB equipment,
whatever... Check it out... It is a FREE service for
fellow Ham Radio operators...

http://www.houck.com/ham

Tnx and 73's

1061. IPS Daily Report - 19 January 96

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4dp8ha$p13@flare.syd.ips.oz.au>
Source record: 231972
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z JANUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 JANUARY AND FORECAST FOR 20 JANUARY - 22 JANUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 18 Jan
Daily Proton Fluence >1 MeV: 6.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 5.3E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Jan 21 Jan 22 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Jan: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 18 Jan
Learmonth 7 2221 2322
Fredericksburg 8 8
Planetary 5 8

Observed Kp for 18 Jan: 1322 2321
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Jan 20 unsettled to minor storm.
21 Jan 10 unsettled to active
22 Jan 7 quiet to unsettled
COMMENT: IPS Geomagnetic Warning 2 was issued on 19 January and
is current for 20 January only.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 Jan Normal Fair-normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Jan Normal Fair Poor-fair
21 Jan Normal Fair-normal Fair-normal
22 Jan Normal Fair-normal Fair-normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
19 Jan 13

Observed Australian Regional MUFs:
Townsville: 15-30% depressed during local day.
Sydney: near predicted monthly values.
Hobart: Mostly 15-30% depressed.
Strong Sporadic E layer was observed at all sites, with
regular daylight blanketing of the F layer at Sydney and
Hobart.

Predicted Monthly T index for January: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 Jan 15 Daylight depressions at low and high lats, otherwise
near predicted monthly values.
21 Jan 15 Daylight depressions at low and high lats, otherwise
near predicted monthly values.
22 Jan 15 Daylight depressions at low and high lats, otherwise
near predicted monthly values.
COMMENT: Strong Sporadic E layer is expected to continue over
the next few days. Geomagnetic activity forecast for 20 Jan is
expected to result in degraded conditions 20-21 Jan.

I'm not a HAM and I know better than this.
CW is more robust than RTTY, maybe.
It certainly is NOT the most robust method of communication today!
Even the Coast Guard has stopped monitoring for CW distress calls.

Last night, I was giving a demonstration to a bunch of
Tiger Cubs (6 yo, pre-Boy Scouts) about the wonders of ham
radio, propagation, and other neat stuff like Morse Code.

Flipped on the TS-440S, running into the tribander up 120'
above the ground at the U of M Radio Club, and called
CQ on 14.250.

I was immediately answered by a guy in SW Florida who was
operating from his car, driving by the Everglades. We had
a nice chat, and the kids (and parents) were summarily
impressed. "Licensing costs HOW much? Nothing?"

Upon signing, I was ready to go to the opening of the mtg.
when I was called by another gentleman in south FL. We
spoke for a few, and ended up going from S5 to S9+30db in
a period of about 2 minutes.

The kids then proceeded to learn a little about Morse, and
I got to send to each other using 49 MHz walkie-talkies.

They had a VERY good time. I half-expect their parents to
go and get licensed, in fact.

What a hobby!

Hi Seth: Have you surveyed your area to determine if another rptr
is really needed? Will you provide coverage that isn't already
provided by some other rptr? Do you really need to pump more
RF into the environment?

Please consider these questions prior to spending time, money,
and effort. Duplication 10-fold is really not necessary.

>Gil Baron W0MN gbaron@sparc.isl.net Web http://www.isl.net/~gbaron

The phone companies are in no danger *now*, because they are the
primary carriers for internet traffic, but that may change as alternate
local providers come on stream. The CATV people are drooling at the
thought of cutting into the local operating companies' territories,
and new wireless networks, like Ricochet, are springing up which
will also put pressure on the local operating companies. With the
addition of those alternate carriers, Internet traffic may indeed
come to exceed POTs traffic.

If the FCC has no taxing power (and they don't directly, it devolves
to them through authorizing legislation passed by Congress), then how
come there's a long distance access charge on your phone bill? The
FCC *can* impose fees (a nice word for taxes), on certain tele-
communications activities. This isn't as far fetched as it may at
first seem. The FCC is mandated to preserve universal service at
the dialtone level for POTs users. They have traditionally juggled
allowed rates to subsidize dialtone for POTs users from revenues
created by LD and business usage. With the internet now becoming a

major user of telecommunications infrastructure, don't be surprised if it is looked at as a source of subsidy for POTs dialtone in the same manner.

1073. This Week in Amateur Radio #147 (for air through 1/26/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-19 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BpELYcP.sanderman@delphi.com>
Source record: 231984

Here is a summary of news items covered on edition #147 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 26-Jan:
-
1. FCC Returns to Work and Amateur Licenses Flow from Gettysburg
2. Commission Puts More Amateur "Millimeter Wave" Spectrum at Risk
3. ARRL Asks to be Included in FCC Spectrum Allocation Hearings
4. Ted Rappaport, N9NB, Promoted to Full Professor at VA Tech
5. Ralph Haller Continues Duties in Wake of FCC Reorganization
6. Henry Tait, VE7FYU, Takes Over as RAC Secretary from VE3PU
7. OPDX Reports 3A0 Prefix Station a Pirate
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "The RAIN Dial-up" from Chicago
10. NASA Reports Problems with Spartan Packet Radio Experiment
11. MIR Suffers Power Supply Loss, Fuses Rationed
12. Goddard's WA3NAN Off During Shuttle Flight Due to Weather
13. Astronaut Receives Amateur Call Sign, Total 41 Astronaut Hams
14. A NASA First - Shuttle Astronauts Wed, Both SAREX Veterans
15. ESA Completes Test of Ariane 5 Rocket, P3D on Flight 502
16. NYNEX Considering Bid for DBS Satellite Position
17. DIRECTV Appeals FCC Spectrum Auction Ruling
18. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
19. Upcoming Special Event Station
20. Update on "This Week's" Pending Return to Satellite Air
21. SETI Learns Difference Between Aliens and Microwave Ovens
22. "Amateur Radio Newsline" - Edition #962 from Los Angeles
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EST) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
-
Due to the loss of satellite facilities, the service is being
carried exclusively on 160 meters at 1860 kHz and on the local
145.33 repeater. The "Tech Talk Network" awaits the signing of a
contract with the new satellite uplink carrier. "This Week in

Amateur Radio" should return to satellite air later this month.
Details will be posted as conditions warrant. All affiliates are
requested to contact the producers for further information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>not affect the SWR, but it does seem to be providing RF feed-back. Any
>ideas are greatly appreciated, as I have no answers to this, nor do any
>of our local hams.

Something is missing from this description. It sounds like you are
saying that the negative pole of the battery is not connected to
anything. If that's the case, then you do have a mystery. However,
I expect the negative pole of the battery *is* connected to something,
something grounded, thus that forms the return path to the radio
when you connect the coax, whose shield, of course, *is* grounded too,
via the antenna to the tower if nowhere else.

Almost every radio will have the coax shield connection commoned
internally with the DC power negative. So the coax shield can
double as the negative return if the ordinary return is missing.
The current path may be through a trace that's not sized to handle
the current, however, and it is possible for radio damage to occur
if you depend solely on the coax shield connection as the negative
power lead of the radio.

Since you say you are using buss grounding technique, I'm not
surprised that you are suffering RF ground loops. That's inherent
with buss grounds. You need to practice single point grounding and
ground window technique to avoid that.

I think you're out of touch, Bill. Postal card collecting is only of value to those who play the game. If you aren't one of those people, replying by mail to those who are can be a time consuming pain. I don't send out QSLs because I don't play the game. If I receive a QSL, I'm much more likely to reply if you make it easy for me to do so. Include a SASE with a pre-filled reply card and I'll sign it and send it back. Send just a postal card, and I may or may not hunt up some card stock and send a postal card back to you.

33 years ago when I was first licensed, I had some cards printed because it was the "thing to do". I still have some of those cards, somewhere, though the call sign is wrong now and so's the address. I might send you one if you made it easy for me to do so. I don't feel, however, that I'm obligated to have stock printed so that I can support the gamers. The ARRL used to make much of this, saying the contact wasn't complete until cards were exchanged. But if you look closer, that was just for the benefit of their awards programs, the cards serve as counters in their games.

The contact should be able to stand on its own merits. If it's interesting, you'll remember, if it isn't, you won't. I've wound up exchanging *letters*, and even phone calls, with a good number of people I've talked with on the air, but a pre-printed card is a cold and inpersonal thing that gives little credit to the exchange of views inherent in an interesting contact. If I'm to be treated as just a counter in a game, I expect the other party to pay for that privilege. They're trying to waste my time twice, and I see no reason to pay for that.

I am looking for Southern California Area Hams that may be
interested in participating in the communications effort for the
1996 Los Angeles Marathon on Sunday March 3rd. A Bunch of Web Pages
have been put together describing the effort (125+ hams used) and
provides an online sign up form. The home page can be found at:

Shetland RAYNET uses said Alinco's.. few have had little problems
with deafness .. perhaps its due to leakage from 2m to 70cm through
the diplexer when using the rubber duck ant. Boy they are a poor match on 2m!

Waters and Stanton have fixed them quickly end efficiently.

Regards
GM4CAQ

Eine fundierte Vorbereitung auf die Sende-Lizenzpr&#65533;fung f&#65533;r Amateurfunk bietet der &#65533;berregionale Ausbildungslehrgang Nord. Der Tr&#65533;ger dieses Intensivkurses ist der DARC in Zusammenarbeit mit der Volkshochschule Kiel.

Im Ferienzentrum Damp an der Ostsee werden die Teilnehmer in einem dreiw&#65533;chigen Kompaktkurs mit dem gesamten Pr&#65533;fungsstoff vertraut gemacht.

Einen besonderen Stellenwert besitzt in diesem Lehrgang das Pr fungsfach
Technik. Der Lehrstoff wird mit experimenteller Vortragsweise erarbeitet und dadurch verst&#65533;ndlicher. Eine Schulphysiksammlung, verschiedene Anschauungsmodelle, eine Videokamera und viele andere Hilfsmittel unterst&#65533;tzen die anschauliche Darstellung der Themen.

Betriebstechnik und Gesetzeskunde werden an der Lehrgangsstation DA0MP auch praktisch vermittelt. F&#65533;r Telegrafie stehen geeignete Ausbildungsger&#65533;te zur Verf&#65533;gung.

Die Ausbildung eignet sich sowohl f&#65533;r Neueinsteiger als auch f&#65533;r Interessenten, die ihre Lizenz aufstocken oder einfach nur ihre Kenntnisse auffrischen wollen.

Der Unterricht wird von 5 erfahrenen Funkamateuren durchgef&#65533;hrt, weitere
Helfer sorgen mit Rat und Tat f&#65533;r die notwendige Unterst&#65533;tzung.

Die Teilnehmer wohnen in Ferienh&#65533;usern oder Appartements des Ferienzentrums.

Der Lehrgang findet in den Osterferien statt, er beginnt am 23.03. und endet nach der Lizenzpr&#65533;fung am 13.04.1996.

I thought I was the only one who had problems signing on to AOL, Not once but three times. The first time it took me four hours and most of that was being place on hold. Been a Prodigy member for awhile and I too I'm getting tired of the commericals. You would figure these groups would wake up and smell the roses but I guess it's like anything else it's a bussiness. I also hear Prodigy may be sold.

: laws and favored-offspring.

Erik Sorgatz' local government may be as he describes it, but the
US (federal)
government is not. Only tiny fraction of federal employees are appointed.
The others get their jobs through a civil service system that has been
remarkably free of corruption.

Another poster has said that the FCC has no taxing power. In a
sense that is probably correct, but the FCC has jurisdiction over all
interstate and international communications from and to the U.S., and
regulates rates. There may alsready be statutory authority for the
kind of FCC fee regulation with respect to the Internet that is being
discussed here. You will have to be an attorney specializing in
communications law to have a useful opinion on this

In defense of Bruce, there certainly are several amateurs in this
area (I live a few miles from Bruce) that hold Extra or Advanced
class licenses and are extremely critical of the Technician
license (and licensees) after the dropping of the code requirement.
At least one is very verbal about this, and he's generated some
seriously ill will. There really is a lot of license class snobbery,
and there really is a lot of anti-"no-code" sentiment, to be found
in amateur radio. This isn't limited to this area as far as I can
tell. Look at the flames we commonly see here on the Usenet
from all over the US, using all kinds of language to insult
amateurs that don't have code credit. It's a very sad commentary
on the ability of amateurs to spread goodwill, I'd say.

At the same time, the flame from Bruce did nothing to spread
goodwill, or cast the Technician class licensees in a positive
light. It is true that Extra and Advanced class licensees have
indeed demonstrated some more knowledge and skill than a Technician
class licensee, at least in the amateur licensing process. That
doesn't mean they're any "better" than a Technician, though. I
know many Technician/Tech Plus licensees that I respect much
more highly than some Extras I know.

I'm a strong proponent of replacing or eliminating the code requirement,
and I very strongly dislike the code snobbery I often see. If you don't
believe me, you can browse the archives of rec.radio.amateur.misc
for a note I sent last summer (search for "snot-hole" in the subject
line). At the same time, I'd suggest to Bruce to ease off the flames
(against Packard-Bell, against me, against just about everyone) and
remember that anti-Extra snobbery is just as offensive as anti-Technician
snobbery. Maybe I am a pompous ass to say it, but I think it is true ;-)

>Greg KO6TH brings up a recurring problem with my DJ-580.... the danged BNC
>connector gets really sloppy... of course, any BNC does this but the 580 seems
>to be worse than others...Anybody solved the problem?

You'll notice that center conductor of the BNC connector on the DJ-580 is shaped kind of like a little fork, and only makes contact with the mating pin on two sides. Higher quality BNC connectors have contacts which completely surround the center pin. I replaced the one in my DJ-580 with one of these, and it's made the connection much more reliable. I did have to file the hole in the case a bit and eliminate the rubber grommet that fits over the connector since it prevented the antenna attaching.

The other problem with the DJ-580 BNC is that internally the center contact is soldered directly to a rigid pin protruding from the PC board such that there is nothing in the system that will flex when stress is placed on the connector. That's why the solder connection between the pin and center contact tends to break. When I installed the new connector, I added a small, flexible piece of wire with a little bit of slack in it between the BNC and PC board pin to take up any stress. So far, it's worked fine.

Be aware that replacing the BNC does require a good deal of disassembly. Unless you're someone like me who's constantly swapping antennas and sticking the radio in a pocket, the stock BNC connection might well prove to be completely adequate.

Greg

1097. PK232 troubleshooting hint!

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-20 00:00:00 UTC
From: wolf wagner <pak02369@pixie.co.za>
Message-ID: <4dqeng$k6t@hawk.pix.za>
Source record: 231989

Hi - I have just managed to solve a problem on a PK232MBX that
had a quite a few OM's stymied:
The unit would work 100% when operating in normal ASCII packet
mode via YAPP etc.
However, as soon as the operating mode was change to KISS or
HOST mode, it refused to send any data to the PC.
The problem was in the RS232 interface IC's which did not
supply the signals required by PC-PAKRATT, the BPQ node etc.
and after replacing U19 and U20 the unit operates properly again.
I replaced both IC's as it was likely that they had both been
affected by the surge and would have ceased operation sooner
or later. These IC's were also mounted on sockets so that they
could be exchanged without too much hassle if required.

Hope this helps someone else!

Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2DND, K4CEF & Southeastern Cluster Group, Inside DX, N4VZ, KK6H, AA8SM, K8JP, KR9U, N9JCL, K0HB, 9M2TO, DK1RP, DL9GOA & DX News Letter, F6ARA, G4BUE & DX NEWS SHEET, GU3MBS, JH1ROJ, ON6TT and PS7AB the following DX information.

3B8, MAURITIUS. Peter, DK1RP (ex-8Q7AB, ex-SV5/DK1RP/P, ex-J6/DK1RP) will be visiting Jacky, 3B8CF, on the 16th of February and will be there for about two weeks. Activity is planned for 80-10 meter including the WARC bands with operations on CW/SSB. QSL via the German DARC bureau, when the cards are printed.

5W, WESTERN SAMOA. The DXNS report Adriano, IK2GNW, will be active February 23-25th, probably as 5W1NW. Some operations will be on CW and RTTY but mainly on SSB. Activity will be on all bands, 160-6 meters with priority for Europe, especially LF bands. Check daily at 1630z on 3.8+ MHz and QSX below. QSL to home call.

9L1PG/9L1MG QSL UPDATE. Scott, AA8SM, reports that Paul/9L1PG and Millie/9L1MG have not been able to get their logs out of Sierre Leone due to the government shutdowns. He was able to receive their logs via a fax for their QSL Manager Cecil, NW8F. The logs for 9L1MG were dated December 22-26, 1995 (approx. 100 QSOs) and for 9L1PG they were dated December 22-26, 1995 (approx. 675 QSOs). If you have been waiting on your cards for these two stations, please be patient. Cecil, NW8F, will be getting the cards out soon. Please send him an SASE.

9M2, WEST MALAYSIA. Tex, 9M2TO, reports he will be in the CQWW 160M Contest. JA1XAC will be sending him a 160 meter antenna to use. He hasn't decided on what frequency to use, but he states he will transmit around around 1900 +/-.

A3, KINGDOM OF TONGA. Paul, KK6H, will sign A35RK between February 20th and March 20th. Modes of operation will be primarily CW and RTTY. Paul

states he will be on SSB if he gets REALLY bored. This is a "business trip" in preparation for a permanent re-location to Tonga in July, but he should be able to get on the air for at least a couple of hours each day (most likely between 1700-1900z and 0500-0900z). He reports he will NOT be on 160 meters this trip. A35RK will be active from each of the following IOTA islands at one time or another, but the exact dates are to be arranged upon arrival: Tongatapu group OC-049, Ha'apai group OC-169 and Vava'u group OC-064. A new QSL route will be used for this operation and all past, plus future A35RK operations, QSL via: Direct to W7TSQ, Robert Preston, 809 Cary Road, Edmonds, WA 98020 USA (W7 bureau c/o W7TSQ). Please... DO NOT send cards to KK6H, W6 bureau, or A3 bureau!

CALLSIGN CHANGE. As reported last week, John/K9UWA and Jean/N9PXF are going to Aruba for the CQWW 160 CW Contest (January 26-28th). John has changed his callsign that was previously announced due to a conflict with Mike's, K4PI, P49I opeartion which takes place during the same time. Instead of using P40I, John will use the callsign P40WA. (Refer to OPDX.238 more details.)

D2TT AND D3T QSL CARDS. Peter, ON6TT, reports cards for the July-August 1995 operations have arrived from the printer. ON5NT, his QSL Manager, is mailing them right now. "Sorry for the delay," de Peter, ON6TT.

GU, GUERNSEY (160M this coming weekend!). Steve, GU3MBS, reports people keep telling him they need GU for a new 160 meters country. So, next weekend a temporary dipole will be put up at the Guernsey ARS HQ and operations will take place at the club station GU3HFN during the night of January 27-28th to take part in the CQWW 160M CW Contest. DX stations needing GU will have to listen carefully in the uproar for a modest signal (FT-990 with no amp, & not-very-high dipole). QSL via bureau, or direct to Guernsey ARS GU3HFN, P. O. Box 100, Guernsey GY1 3EL, via UK. [These are the ONLY routes for GU3HFN QSLs].

IOTA NEWS. Paz Island, IOTA SA-027 (DIB: 063, DFB: SC-01) will be active next week (January 26-28th). Operations will be on CW/SSB with activity on 10-80 meters. The callsign is not known yet. Check the IOTA frequencies and the Brazil DX Nets for operations and updates. QSL via PP5LL..... JUST A REMINDER! Later in the week, Robben Island (AF-064) will be active. A group led by Barry, ZS1FJ/G4MFW, will be on CW/SSB/RTTY with activity on 80-10 meters. Length of operation will be from January 26-29th. The callsign will be ZS64RI. QSLs via KA1JC....

J7, DOMINICA. Scott, N9JCL, reports that he has received the callsign J77A, so look him, Tom/K0SN, Paul/WC9E and Jim/AA9PB to be active until January 25th. As this bulletin was being prepared, QSNs show that they were active on 40, 75 and 80 meters. QSL via K0SN. (Refer to OPDX.236 for more details.)

JW, SVALBARD. Claude, F6EOZ, will on the boat with Jean Louis Etienne (French Artic and Antarctic explorer) in Svalbard from March 3rd until the middle of May. He will use JW/F6EOZ/MM or JW/TM6E/MM callsign specially in satellite and 20 meters.

KH9 DXPEDITION (Final News Update). The following is an edited excerpt from a press release by Don, WB2DND: "The Dateline DX Association is pleased to publish this update on its plans to activate Wake Island, February 1-7th. This will be a one week, all band, all mode (including Satellite) operation by 4 experienced operators with the intention of taking KH9 off the DX Bulletin's most needed 100 list and satisfying the large European demand. Wake ranked 86 overall but in the top 20 for Europeans. The call used will be AL7EL/KH9. KC7V has had to pass on going due to business comittments. We will miss you Mike. N6EK, Bob Fabry, will join the team as the fourth operator--welcome aboard. Our needed equipment has been acquired. Wake Island is currently a limited access U. S. Military Installation located 19* 17' N. 166* 39' E. It is the first American possession in time zone #1, approximately 2300 miles West of Hawaii. The new QSL route will be K4HQI: Lloyd Westbrook, Box 368, Commerce, GA 30529. Please direct your comments to either coordinator: Tom Harrell, AL7EL, k4tsj@ix.netcom.com -OR- 27257 Nellis Road, Evans Mills, NY 13637

Don Greenbaum, WB2DND, wb2dnd@aurumtel.com -OR- 250 Standish St. Duxbury, MA 02332

SPECIAL NOTE: All OPDX subscribers (on InterNet) will receive an additional bulletin containing the complete press release.

KP4, PUERTO RICO. Ken KP4XS reports that a contest team is being put together to be active in CQWW WPX SSB Contest which takes place in March. The current team line up is: 160m-ND3F, 75m-W4MYA, 40m-open, 20m-KF3P, 15m-KP4XS and 10m-W2EOS. Ken states they need a "GREAT" 40 meter operator! The SSB operator needs to know the ropes on 40 meters; one who can handle the QRM and knows the splits, etc. The WPX SSB contest is the last weekend of March and the team will be a Multi/Multi entry. The KP4XS Puerto Rico QTH will be the operating site. It is located in SW Puerto Rico on 18 acres and sits on a hilltop at 220 feet above sea level with ocean views from north to west to south. KP5 is easily seen from "THE HILL". All accomodations are provided. The only thing you provide is your own airfare. If interested on becoming the 40 meters operator, contact Ken Ramirez, KP4XS, via InterNet at: ramirezk@emi.com

P5, NORTH KOREA. The latest rumor on this one is reported in Inside DX: "Watch for OH2BH, OH0XX, and possible others from here starting around mid to late February."

PACIFIC DXPEDITION. Adriano, IK2GNW, will be active from American Samoa (KH8) February 18-22nd as KH8/IK2GNW, Western Samoa (5W) February 23-25th (probably as 5W1NW), Tonga (A35) February 25-29th (probably as A35NW) and Hawaii (KH6) March 1-3th as KH6/IK2GNW. Some operations will be on CW and RTTY but mainly on SSB. Activity will be on all bands, 160-6 meters with priority for Europe, especially LF bands. Check daily at 1630z on 3.8+ MHz and QSX below. QSL to home call.

VP5, TURKS & CAICOS. Joe, K8JP, will be here February 11-19th. Operations will be mostly on CW, low bands and the WARC bands. He callsign will be VP5/K8JP, but he plans to participate in the ARRL DX CW Contest as VP5JP

(Single/OP entry). Joe will also be going on an over-night IOTA trip to Salt Cay (NA-003), in the Turks Islands. QSL to K8JP's new address: Joe Pontek, P.O. Box 59573, Schaumburg, IL 60159-0573.
The DXNL reports Koji, JJ2QEH, and Mack, JJ2QXI, have rented the shack of VP5JM and want to make as many contacts as possible from February 3-9th. Each operator will handle their own QSLs for the QSOs made via the bureau or direct. JJ2QEH via Koji Iida, 1866-2, Ota, Minokamo, Gifu 505, Japan and JJ2QXI via Masahiro Mori, 1268, Atobe, Mugegawa, Mugi, Gifu 501-26, Japan.

XV, VIETNAM. JA3UB, JR3MVF and JH3GRE will be visiting the club station in Ho-chi-minh City from February 9-15th. They were asked to maintain their equipment and antennas at the club. In their spare time, they will be active on 160-6 meters SSB/CW including WARC bands using 500watts and wire antennas for the low bands. Callsign and QSL route will be announced later. Send schedule/request to JH3GRE's FAX at 81+727-22-5959.
ADDED NOTE: As this bulletin was being prepared a station, XV1A, was reported on the 14226 DX Net at 1615z Sunday (January 21st).

XV7SW UPDATE. Hans, K0HB, reports hearing Rolf, XV7SX, on 160 meters, and that Rolf plans to be active more regularly on 1827 kHz at his sunrise in Hanoi at 2330z. Europeans report hearing Rolf on 3505 kHz around 0000z.

XZ, MYANMAR. DXNS reports that XZ1A will be active in the CQWW 160 Meter Contest. Meanwhile, Pekka, OH1RY, says he and OH1MA will be active January 26th through February 3rd as XZ1R. More details are forthcoming.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

I just recently purchased an IC2700H and moved my IC2410 into the house.
First thing I noticed is the VHF receiver in the 2700 is not as good
(selectively) as the 2410. It seems to be more prone to overload and
cross-mod. Anyone have any similar problems and solutions for correction?
Also, I'm looking for any mods for this radio. Can anyone help?

With the usual complaint he makes at least once a month.

|The F.C.C. said the following:

The FCC has nothing to do with headers in bulletins.

And the rest of this rant seems to have nothing to do with headers in ARRL
bulletins.

Since you seem to complain about the bulletin headers on a regular basis,
next time, you may take it as read that I will have responded similarly, so
I won't be actually doing it.

Well, I think we have as much chance of resolving this as we do in resolving the etymology of the word "ham" as we use it. Having said that here's my two cents worth of fat on the fire! I seem to remember reading (don't remember where since it was around 35 years ago) that "CQ" was an acronym for a French expression of idiom for "general inquiry". Tis ring a bell with anyone.

1106. Cape Cod Teacher Fired

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-21 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <4dtbbo$9sq@alterdial.UU.NET>
Source record: 231909

A Cape Cod Teacher was fired after producing some videos.
(a long time teacher in the Dennis-Yarmouth school system).
Many students demonstrated for him.
No hams did.

>:Bill was pretty good on bug . Sure would like to see if i could contact
>:some of those club hams again. Tom, KA8JIL.

Sorry Tom. I don't know anyone who was there at that time. I was president of K5TYP from 82 to 85. Through the years the club membership waxed and waned...At one time we almost lost the club. WA7SKG and myself went before the base commander in 1982 to plead our case to keep the club going. Of all the MWR activities it was the only one in the black. It became the Keesler Amateur Radio Activity in 1985.

Last time I stopped by and visited was in 1990. The club appeared to be going strong. I even worked K5 Tiny Yellow Polka-dots in a few contests since then.

I still have a fondness for K5TYP... It is through the club that I obtained my ticket <KA5MWD> in 1981.

Just a thought....you may want to contact K5QQT or K5QKY...Betty and Bob Beckstein, respectively. They have been in Biloxi for some time and if anyone could answer your questions they would be most likely able to.

1111. Yaesu 530 Tone Burst ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-21 00:00:00 UTC
From: william@cortex
Message-ID: <4duh98$inp@medulla.ama.ttuhsc.edu>
Source record: 231914

Hello all,

I am contemplating a trip to the United Kingdom this summer, and would like to be able to use our FT530 HTs. I can handle getting the reciprocal license, but how do I use the tone bursts to open the repeaters there?

Does the Yaesu have this built in ? I don't see this in the manual.

Is there an external tone generator that will do this ?

Perhaps some of our European friends can help us understand how this works.

Also, I have a portable HF rig that I can bring, but I am concerned that I might not have any antenna space living out of hotels. Has anybody done this in England ?

Thanks, Reddy Biggs

Jim Jaworski (jim@draco.bison.mb.ca) wrote:
: Morse Code is DEAD. Get rid of it. This IS almost the 21st
: Century you know.

Jim, while I support the UHF/VHF Codeless license, I certainly do not agree that CW is dead. Yesterday I worked the ARRL VHF/UHF contest with a small group of friends on a mountaintop. I was operating a tiny Icom 402 QRP rig that puts out a mere 3 watts of SSB or CW on 432 mHz. Several stations could just not hear my puny 3 watt SSB signal, but could copy me when I went over to Morse Code.

Yes, there are some new digital modes that may work better, but require hardware much more sophisticated and far less rugged than my trusty old J-37 telegraph key. CW still works well under weak signal conditions.

From: commo@k1log.ultranet.com
Message-ID: <commo.165.00687D28@k1log.ultranet.com>
Source record: 231920

In article <4dtbbo$9sq@alterdial.UU.NET> Burt Fisher <k1oik@ccsnet.com> writes:

>A Cape Cod Teacher was fired after producing some videos.
>(a long time teacher in the Dennis-Yarmouth school system).

More detail needed - very incomplete picture to anyone on the net not in the news are where this is beign covered!

The school teacher had produced and starred a mix of soft and hardcore porn videos done in CA. and had allegedly solicited a student to appear in a video. The story was in the Thursday issue of the Boston Globe, page 25. There was also an a follow up issue in the Saturday Globe (page 20) that a second student had come forward and alleged that the teacher had solicited her appearance in a video. The paper pointed out that both students were over 18 at the time of the alleged solicitations.

>Many students demonstrated for him.
>No hams did.

Not very surprising to me. Unless any ham happenening to live in the Dennis-Yarmouth area and has a strong opinion on the matter one way or the other why would he or she? The school superintendant did was he thought was right and teacher (claiming innocence of solicitation) asked the students to go back to school. Apparently both the superintendant and the teacher are following, or are expected to follow, the accepted protocols for handling this sort of problem.

Dear Fellow Hams,
I am a thirteen year old General class ham. I am performing a science experiment to study the
effects of changes in the ionosphere on radio waves. To perform this experiment I need four volunteers, one
one-hundred miles away or less, one five hundred miles, one one-thousand miles, and one two-thousand
miles away. (Further away would also be fun!) I live in Thousand Oaks, CA, which is about 50 miles
north-west of Los Angeles.
I plan to contact four hams at different distances from my station, at different times of the day and
record the RSTs in order to see the effects the ionosphere has on the radio waves. I'd like to do these QSOs
during February.
If you would like to volunteer for some QSOs with me, or have any suggestions, you can reach me
here or e-mail me at doug@sagepub.com.
73,
Doug McCune, KE6WXM

GREEN SHEET from theinric@crl.com

For Sale:

Glen 326-G Digital Controller manufactured by Glen Manufacturing in
Stockton, CA

<start: direct quote from the manual>

"Congratulations, you have just purchased a very unique and precision
instrument. This unit contains a VFO, Digital Computer, Frequency
Counter, and a 5 digit LED display. Its function is to generate a stable
variable frequency, compute and display the resultant transmit or receive
frequency.

Technical Specifications:

VFO Frequency Range--7 to 25 MHz on fundamentals, 14 to 50 MHz on 2nd
harmonic.

Tuning Ratio---------10 : 1 vernier on Coarse, and Fine controls.
500 KHz may be tuned on any band.

High/Low switch------Shifts any selected frequency up 400 KHz,
allowing coverage of any band of 900 KHz.

Display--------------MC or KC gives a choice of either 1KHz, or .1KHz
resolution on display.

Accuracy-------------1KHz in MC position, .1KHz in KC position.

Counter Range--------5KHz to 50MHz, fully programmable on 5 digits.
X1 or X2 multiplier for harmonics.

Power, Base model----117 Volts AC @ .1 Amps @ 60 Hz

Power, Mobile model--10 to 20 Volts DC negative or positive gnd.
Either lead may be reversed with out regard
to polarity.

Note:
Novice band, business band, or citizen band is not permitted the use of a
VFO to transmit with. Only crystal controlled transmissions are
authorized by the FCC on these bands.

If the purpose of the VFO is to monitor the various bands previously
mentioned, and a transceiver is used, then the transmitter should be
dis-abled or the microphone removed to prevent the possibility of
transmitting.

<end-direct quote from the manual>

Face description:

Has five digit readout
High/Low switch
Fine tune pot
Coarse tune pot
on/stby switch
on/off power switch

Back description:

KC/MC display switch
X2/X1 multiplier switch

Wynnt,

My post in no way slandered Bill or accused him of anything yet he resorted to the same vitriolic name calling he uses on his "slanderers" in his reply to my post.

This response gave me a great deal of insight into his character and confirmed negitive opinions of him. My intent was to offer constructive criticism but Mr. Cheek doesn't seem to respond well to criticism in any form. Since schoolyard name calling bores me I have no intention of continuing in this "discussion".

Jerry

Dave,

I guess I might be overlooking something, but I don't see a URL listed
here. You might want to post that so people can check out your page.

Actually, I believe that the FCC's opinion is formed ("compliant with" might
be a better choice of words) by the ITU (or some other such similar
international "regulatory" body). Someone else on the net more knowledgable
about this than me might have some words to speak about this one way or
'tother.

Greetings,

I am looking for a way to send a ham packet via an Australia internet
e-mail address.

I am basically looking for a gateway that I can send via the internet a
ham radio packet message to a friend in Australia.

I have been using the W2XO gateway in Penn., but I am not sure how
effecient it has been working. A gateway in VK land would be great.

Any ideas appreciated and please respond via e-mail if possible.

Thanks and 73,

Gary (N5PHT)

Greetings,

My brother-n-law (KI7XQ) is looking for about 3 feet of 72 ohm twin lead.
He is working on an antenna project of some kind that requires the 72
ohm twin lead for a balun.

Any ideas would be appreciated. Please respond via e-mail if possible.

Thanks and 73,

Gary (N5PHT)

Try telnet to callsign.ualr.edu 2000 They seem to update
daily. dont forget that the FCC is part of the current
Republican-Democrat budget battle and is only back to work
in the last week or so on a CRA that goes to 26 Jan. Any
updates by the FCC will depend on whether they are working
this week or not.

1137. TV disturbs radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-22 00:00:00 UTC
From: artburke@solar.sky.net
Message-ID: <4e0cke$gmc@alpha.sky.net>
Source record: 231848

There are several possible reasons for TVs to interfere with shortwave receivers:
(a) 15734 Hz mis-shapened squarish waves (created by the horizontal deflection system) These can also create "birdies" every 15734 Hz!

(b) 3.58 MHz color oscillator

(c) harmonics of either of the above depending on proximity of the television.

(d) "leaky" cable systems.

From: artburke@solar.sky.net
Message-ID: <4e0coq$gmc@alpha.sky.net>
Source record: 231849

Sometimes you can get lucky just using a portable AM/FM radio, preferably tuned on the AM band. Try tuning to a frequency not used by a local station and look for nulls off the end of the built-in loopstick antenna. While it isn't as accurate as a VHF rig with Yagi, it's a lot more convenient and can often "get you in the neighborhood."

It's original use was on board ship. It is the general call to quarters for radio operators. Quarters being the radio console in the old days, there was always a bed and bath in the radio mans office. Since most don't bother to learn code anymore, you need to know what it sounds like to have it make any sense. It's use in ham radio because there was no standard at the time. Since most hams at the time where ship board radio people, they simply used what that had always used. Over the years it was adopted by hams due to the way it sounds, and not based on it's meaning.

Burt is like the pot calling the kettle black. Usenet guidelines call for signatures to be no more than 4 lines; his are always much larger than that. (This one is eight). I don't know why he keeps cluttering the group up with these messages; I guess he's run out of other things to say and this is the only way he can keep the pot going to get the attention he so obviously needs.

===
A good point. As a QSL manager for various DX stations, I can tell you
that far too many new DXers assume no SASE is necessary to get the
DX station's QSL. Wrong! An SASE to a QSL manager is just basic
good manners. After all, I don't get paid for this voluntary chore,
despite the old canard about us QSL managers selling masses of IRCs for
trips to Europe and banking thousands of green stamps, etc.
If you don't send an SASE, your QSL is not ignored -- it's sent to the
QSL bureau, of which many newcomers, alas, know nothing. So, it's a waste
of my time,
and yours. The SASE would have been more realistic.
Interesting observation: For some strange reason, most Canadian stations
requesting a DX QSL card NEVER send an SASE, or an IRC, or even a loonie
dollar or what have you. I guess they assume that, being DX of sorts
themselves, they are exempt from the SASE requirement. Wrong. Lots of VE
cards go to the bureau.
At any rate, I have yet to become so jaundiced in ham radio that QSLs
mean nothing. I love to get them. Several thousand for other folks,
though, don't stir the blood, hi..

Hi Avery

As the EC for Fairfax Co. VA I agree 100%. After this storm I believe the NCAC,
which is the National Capital ARES council, which most EC's from the area belong,
are going to tackle this dilemma a bit stronger. My fairfax group actually put in calls
to the local media, but the storm as big as it was limited (as they told us) what they
could do as
far as feature stories and the like. We still managed to supply critical communications to
4WD vehicles and alot of our hams even have their own 4WD and were proud to take
part in this snow emergency. As with many other events/situations, they are always a
learning experience, and we will have changes that we will make, but all-in-all went very
well. We worked with the local REACT folks who have been doing this sort of thing
through Fairfax hospital for years now, and together we were very organized and sucessful!

Anyway, Avery take care, and probably be talkin' to ya again!

>to change it. Anyone have that information ?
>
> jd
>

I replaced one of these just the other day. The bulb is soldered to the display board. To get to it you have to remove the front of the radio. Remove both top and bottom covers. You should see 4 screws which attach the front pannel assy to the frame. Remove these screws. Next remove the knobs and uncscrew the retaining nuts from the mic connector and tuning knob. The face should come off now and you can see the 2 bulbs on each end. I desoldered mine, but after thinking about I think the best thing to do is to just cut the old bulb out and solder the new one on. The bulbs cost about $3 each and are available from the Pacific Cost Parts at 800-262-1312 (I think they have an east cost outlet too). They'll ding you $6.50 for S&H.

Good luck

From: red@redpoll.mrfs.oh.us (Richard E. Depew)
Followup-To: news.admin.net-abuse.misc

I have issued 21 cancels for large binary files (average size 382,349
characters - total size 8,029,336 characters) posted to 13 different
unmoderated discussion groups in the comp, misc, news, and rec
hierarchies (some with cross-posts into alt) as follows:
<text deleted>

1 rec.radio.amateur.misc

This report is being cross-posted to each affected newsgroup.

to receive the binary files.

There has been a long-standing consensus among news administrators that
binaries belong in binaries newsgroups, and not elsewhere. There seems
to be an emerging consensus supporting the cancellation of large
binaries in discussion groups as long as appropriate protocols are
followed. I am testing that consensus and developing a protocol.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to myself. If there is an unmoderated binaries group in the
hierarchies that I scan, I don't know about it yet. Feel free to
enlighten me.

The sizes and headers of the canceled binaries follow:

Hello Out There!

I'm a complete newbie and I was told that there's some kind of jargon or codes that are used over the CB such as like 10/4 for Roger and Out.

Stuff like that. Like they use "Smokey" or codes to describe stuff and CB users are well versed in this lingo.

Anyone kind enough, please send me or direct me to where I could get such jargon or lingo codes. Tia!

Willie Bunda (wbc@hkstar.com)

1162. Motorola Information

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-22 00:00:00 UTC
From: dcimp@aol.com
Message-ID: <4e0vf7$hme@newsbf02.news.aol.com>
Source record: 231873

I am looking for some information on Motorola Radios,

I have 2 VHF MX300S (136-150 split) portables, they have most of the parts in them, what I need to know, is about at the bottom of the radio, there is an area listed for the Flex ....modual, and another area below that for some part, can anyone tell me about it, It looks like I have part of the Top modual, but a cap may be missing, and there is a blank space below it, How hard are they to get ptogramed?, how often can it be programed, only 1, or more times, if I want?, where can I get the Prom for the radio? etc. My goal is to get it programed for the ham freq's, are all the memory moduals the same in the VHF versons, I can get a 150-162 split radio, with ALL parts intact, but I do not know if the memory moduals, are the same, it looks that way from the manual I have, but I'm not 100% sure.
Are the parts the same for all the Models as far as number of channels is concerned?, can I take a 12, 24, 48 channel radio with no parts inside, and transplant the 4 Channel parts into it and have the 48 CH version?

OK, next topic.....

I have a SYNTOR Mobile, I was told it was a 16 Channel version, but I do not have the control head, speaker, mic, etc. I also have been told that Micor excessories work........ If I have the radio programed for the 16 channels, can I only use a 16 channel control head? or can I use any one I have on hand, i have a SYS 90 8 FReq set, and a 12 ch set, and another 4 channel set, (All From Micors) will they all work???? my goal it to use the 12 channel set, but the 8 CH set has scan on it???? any input. The radio is also 136-150 split, will that make any dif???? where can I get it programed, and where can I get the proms????

thanks in advance for any information you can give.

thanks Dave KB8QHU

1167. Re: Help on Antennas and Satellites!

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-22 00:00:00 UTC
From: Hans Brakob K0HB <71111.260@CompuServe.COM>
Message-ID: <4e1251ars1@mhafc.production.compuserve.com>
Source record: 231878

Hams don't "need" satellites to communicate, although we have
built and launched quite a number of them, including "Oscar I"
which orbited before any manned orbital missions!

Hams use satellites in a number of ways.... the simplest probably
is for simple voice communications, where the satellite simply
receives on one frequency band and retransmits on a different
band.

Hams pioneered the Low Earth Orbit Satellite concept, as a
digital "store and forward" platform. Oversimplified, this
type of operation allows a ham in the footprint at one point in
time to upload a datagram which is later downloaded by the
destination station when the bird illuminates his location.
This mode (LEOS) now sees significant commercial usage, after
being "proven in" by amateurs.

Regards,
Hans, K0HB

Look on my website below, and click the link to "AMSAT" --
they have a lot of stuff which might be of help in your paper.

Subject: RB414 Emergency Mgt, Mutual Aid, 2/6

To: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 414: MGT - Mutual Aid defined; for Release 1/22/96

Query: In the context of the OA, define Mutual Aid.

Response: Mutual Aid is a statewide system to ensure that
adequate resources are provided to jurisdictions whenever their
own resources prove to be inadequate to cope with a disaster. In
most states, as in California, the local jurisdiction is the one
that is responsible for the emergency response. In the mode of
neighbor helping neighbor, cities and counties, and then the
state and federal governments, assist one another through an
incremental and progressive system of resource mobilization.
Mutual Aid is activated in an ascending order: local, county
(operational area), region, ending with state and federal
governments.

In recent years the mutual aid system has developed beyond the
traditional law and fire functional areas. This extension of
mutual aid beyond its discipline-specific (traditional) areas is
an outgrowth of experience in a variety of disasters. Cities and
counties may activate Emergency Operations Centers (EOCs) in
response to disasters. Depending on the nature and magnitude of
the event, a countywide response may be needed to mobilize assets
from the county and its component cities. In some states, in
addition to cities and counties, special districts are a form of
local government that provides specific services, such as water,
regional transportation, waste disposal, etc. In an emergency
several such districts may support other similar districts
adversely affected by an event. On the county-wide level the OA
facilitates this coordination - as a single point of contact -
for the special districts which may be represented in the city
and/or county EOCs.

Next week: More on Mutual Aid.

Are the new EMCOMM Bulletins being filed on your BBS?? If not,
Please ask your Sysop to create an EMCOMM file section for them
so we can change the "RACES" Bulletins to EMCOMM. Thanks!! Cary.

Re: Tax the Internet

As a current government employee (need to say that up front in this I think) I have to say that I agree with the notion that the government is too damn big, digs too deep in all our pockets, and has worked too damn hard redistributing the wealth of this country from the do'ers to the don't cares, creating a huge social problem and "dependent class"! However, lets get the facts straight before you shoot off your mouth and spread bad information. For example; the comment that federal employees "don't participate in social security" is bullshit! While it is true that many civilian employee's retirement funds began BEFORE they were REQUIRED to participate in the SS fund, they still do (now) have to endure the same level of deductions from their pay as anyone else does! Those that began their government service after that magic date (I honestly don't recall when that was; back around 1967 or '68 I think) have always had SS deducted, and at the same level as anyone else. There are exceptions in the GM service (higher level manager types) and in (now get this.....D.C. itself--gee, wonder why?). But, they get other benefits the rest of us don't also, like the medical, etc. Thats another popular misconception that I've heard advanced, even on national media (well, guess I shouldn't be surprised at that :-)) that we (civilian employees) get free medical!! Another line of crap! I now pay TWICE what I did as a private sector employee of a very large company, and for less coverage!! So, get it straight.

1171. WB0QCD Alford-Slot Antenna Measured Performance

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-23 00:00:00 UTC
From: magliaco@pilot.njin.net
Message-ID: <4e3mqf$o18@pilot.njin.net>
Source record: 231792

Hello folks!

I just wanted to mention that I recently completed a Web page regarding
70-cm Amateur Television. The URL is:

http://www.njin.net/~magliaco/atv.html

There is a link from this page to another page that shows the performance of
the WB0QCD Alford-Slot Antenna as measured on a professional antenna range.
The antenna patterns are truly horrible!

The WB0QCD Alford-Slot antenna has become popular for ATV repeater use
because of it's horizontally polarized, omni-directional radiation pattern.
The claimed gain is 5.6 dBd. Look at the patterns shown on the Web page
to determine just how close 'QCD's claims come to reality!

Have you also done the bonding routine of the hood to the fenders, and fenders to firewall, fenders to radiator support, all to the vehicle frame etc. doing this lessened my ignition noise from about an S-9 to about an S-2 to 3 depending on the load. I did not believe it would work, but had a spare sunday afternoon and some old coax. I sandwiched the bonds netween shake proof lock washers, also scraped a bit of paint where I attached the ground. I use No. 8 stainless steel sheet metal screews. phillips head.

Try it.

=========
SpaceNews
=========

MONDAY JANUARY 22, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* OSCAR-10 NEWS *
=================
AMSAT-OSCAR-10's orientation is such that its solar panels are not receiving
adequate illumination to maintain a charge on its storage batteries. As a
result, the downlink recently experienced frequency instability, and has now
gone silent. Users should refrain from using AO-10 until sun angles improve
to the point where its storage batteries can one again be charged.

* WEBERSAT-OSCAR-18 NEWS *
==========================
WEBERSAT (WO-18) is currently sending telemetry, photos, weekly whole
orbit data (WOD), and light spectra of the Sun or Earth on Mondays.

The satellite's digipeater is on and can be accessed on an uplink frequency
of 145.900 MHz. Using a terminal program connected to your TNC/PSK modem,
try connecting to yourself or calling CQ "VIA WEBER-1". Repeated packets
will appear on the downlink between telemetry and CCD image data
transmissions.

Photo 10/14 of Ethiopia is the current image. It has great contrast with
very few clouds and land features clearly visible. Use WW1.3 to convert the
photo to a GIF image, then use your favorite graphics program to size it,
and adjust the contrast and brightness slightly.

The satellite continues to have a weak and relatively steady tone of about
1200 Hz in the downlink signal, which can cause reception problems with some

modems. If this problem occurs, a ground-based solution is to adjust the IF-shift of the receiver to suppress the carrier into the skirts of the IF filter. Night reception seems to be better than in the daytime.

WOD collection and broadcast will adhere to the following schedule:

13 January/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
20 January/Week1: Array currents, Ch# 26 27 28 29 2A 2B
27 January/Week2: User requested channels, Ch# ?? ?? ?? ?? ?? ??
3 February/Week3: BCR, 21 22 29 2F 33 36
10 February/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
17 February/Week1: Array currents, Ch# 26 27 28 29 2A 2B

Check your local BBS, an issue of SpaceNews, or AMSAT bulletin for the current status of your favorite satellite.

[Info via Tom, IK3WVJ]

* OSCAR-11 NEWS *
==========
The UoSAT-OSCAR-11 continues to function well. UO-11 may be copied transmitting AFSK data on a narrowband FM carrier frequency of 145.826 MHz. OSCAR-11 transmits binary and ASCII data at a rate of 1200 bits per second. Surplus Bell-202 modems can be used to demodulate OSCAR-11 data provided the demodulated data stream is inverted prior to its application to the computer's serial port.

The following computer status report was recently received from OSCAR-11 by IK3WVJ:

>base, and it would be tethered with wire, making it a beautiful 160 meter
>vertical. I'm interested in altitudes of between 2000 and 10000 ft.

Pardon me, but this is dangerous as hell except in rather special
circumstances. In the first place, a tethered weather balloon will
lay almost horizontal in any wind. It won't just hover straight
overhead, so it's difficult to get much altitude this way. Now
consider all that wire laying out over the countryside, unless
you're in an incredibly rural area, it will find a power line.
Your estate may have to pay for any damages incurred by the grid.

If you want to use a tethered balloon, you need a blimp-like balloon
with aero surfaces that can be set to cause it to *rise* into the
wind. These can successfully be used to obtain reasonable heights.
Balloon advertising companies can be a source of these, fair warning,
they aren't cheap.

And don't even *think* of tethering a balloon with 2000 or more
feet of wire unless you are *miles* from the nearest power line,
and maybe not even then. Think what would happen if the tether
breaks and that long trailing wire goes sailing across the
countryside to come down who knows where (the power company
will probably know). Tethers should always be non-metallac,
or at least you need a positive way to make sure that if it
breaks it breaks at the balloon and not down near the ground.
That'll limit the distance from the tether site where the
wire will be a hazard.

>2) A free floating balloon, carrying maybe a repeater, ATV, etc. I know
>this has been done by several groups in the past, so there must be some
>experienced folks out there.
>
>What regulates balloons like these?
>
>What does the FAA require me to file, and how long should I expect to wait
>for permission (barring any more government shutdowns)

The FAA has a FAR for this. There are limits on payload mass, limits
on visibility, you have to file a flight plan far enough in advance
to allow an airman's warning to be issued, and you must contact the
FAA immediately upon launch so they can actively warn aircraft along

the flight path. This isn't too hard to do, but you need to get a copy
of the relevant FAR and study it in advance to make sure you do it right.

From ARRL Headquarters
Newington CT January 22, 1996
To all radio amateurs

SB QST ARL ARLB005
ARLB005 ARRL Board meets

The ARRL Board of Directors met in annual session, January 19 and 20, 1996, at Savannah, Georgia. The following are highlights of the Board actions:

A committee will be appointed by the President to draft ARRL policy positions, based on membership input, on questions to be addressed at WRC-99. Issues to be studied include possible simplification of the licensing structure, harmonization of licensing standards internationally, and consideration of Article S 25 of the international Radio Regulations, the technical and operational rules governing the Amateur and Amateur-Satellite Services, including but not limited to the HF code requirement.

The Ad Hoc Repeater Coordination Committee will continue dialogue with the repeater coordinators' drafting committee and other interested parties, and report to the Board at its next meeting any recommendations for regulatory change and suggestions for improvement of the coordination process. The drafting committee was created at last October's ARRL-sponsored open meeting of repeater coordinators in St. Charles, Missouri, to draft documents addressing such matters as the ''single point of contact'' between FCC and coordinators, recognition of coordinators, and dispute settlement.

The Board elected Rodney J. Stafford, KB6ZV, as President; Stephen Mendelsohn, WA2DHF as First Vice President; and Joel Harrison, WB5IGF, and Hugh A. Turnbull, W3ABC, as additional Vice Presidents. International Affairs Vice President Larry E. Price, W4RA, was re-elected. First Vice President Jay A. Holladay, W6EJJ, retiring from the Board after 21 years of service, was elected Honorary Vice President.

With the ascension of Directors Mendelsohn, Harrison, and Turnbull to Vice President posts, Hudson Division Vice Director Paul Vydareny, WB2VUK, Delta Division Vice Director Rick Roderick, K5UR, and Atlantic Division Vice Director Kay Craigie, WT3P, all automatically assumed the Directorship in their respective divisions, effective at the conclusion of the Board meeting.

Treasurer James E. McCobb, K1LLU, Executive Vice President and Secretary David Sumner, K1ZZ, and Chief Financial Officer Barry J. Shelley, N1VXY, were re-elected.

Northwestern Division Director Mary Lou Brown, NM7N, Roanoke Division Director John Kanode, N4MM, Southeastern Division Director Frank Butler, W4RH, and Southwestern Division Director Fried Heyn, WA6WZO, were elected as members of the Executive Committee.

Gene Hastings, W1VRK, Rocky Mountain Division Director Marshall Quiat, AG0X, and Roanoke Division Director John Kanode, N4MM, were re-elected members of the ARRL Foundation Board of Directors for three-year terms.

David Mann, VP2EHF and Dorothea Mann, VP2EE, won the International Humanitarian Award for 1995 for hurricane relief efforts.

ARES members of Oklahoma were awarded the ARRL Certificate of Merit for their courageous efforts in providing critical emergency communication services to agencies responding to the Oklahoma City bombing.

The Board awarded Frank Bauer, KA3HDO, the ARRL National Certificate of Merit for his outstanding volunteer service as a member of the SAREX Working Group.

A new procedure for the reporting of Advisory Committee recommendations was adopted.

Scarborough Reef was approved as a DXCC country. A separate DX bulletin will provide details.

A committee will be assigned to review the DXCC Program and make necessary recommendations in order to encourage broader participation, make the program more equitable, create better understood criteria for DXCC ''Countries,'' improve the process of reviewing requests for additions and deletions to the ARRL DXCC List and increase efficiency in the administration of the program.

The Secretary was instructed to poll the ARRL members in Herkimer, Otsego, and Schoharie Counties in the Northern New York Section, to determine their desires, on a county by county basis, regarding their inclusion in either the Northern New York Section or their former Section of Western New York. Results are to be communicated to the Executive Committee no later than March 15, 1996, so that the question can be resolved before the next election of Section Managers in the affected sections.

To improve its operations, the Board will experiment with a new system of standing committee and Board meetings during 1996. Committee meetings will be held in July and October, in conjunction with meetings of the full Board. The consolidated meetings will save time and money.

Details will appear in March QST.

Dang! The technician group is now the most populous of all license classes. Let the license snobs piss and moan, there are more techs now than all the other classes combined (and believe me that is not going away)... Ham Radio as it was known was dying on the vine, there is no disputing that. The no-code license may be able to save it, unless the license snobs frighten away all the newbies.

Anyway, why would a no-code tech want to upgrade when he/she has access to over 10 times the spectrum of the HF bands without getting into microwaves (>1GHZ)? Surely not so he/she could associate with the spouters of ill will. Those who poo-poo the nocoders are shooting themselves in the foot, they should be elmering and otherwise encouraging these new hams.

Go ahead, and look my license up in the callbook. I ain't afeared.

I have to partially agree with both of the above opinions. How? I am always more than willing to help out a new ham, and offer any assistance I can. In fact, I have served as an "elmer" for more than a couple new hams. However, I do get rather irked by some questions, that should be VERY basic knowledge by the time a new ham gets licensed. As one example, I have been asked how long a quarter-wave antenna for 2 meters should be. Now come on, that stuff's in the Technician test and study guides, and with a little math, it's not hard to figure out. This shows me that the person either crammed and didn't really learn the material, got one of those books with just the questions and answers, or has no desire to do a little brain work. They therefore have no foundation of knowledge to work from. Granted, I'll tell the person the answer (and explain why), but it still bugs me when new (and some not-so-new) hams don't know a simple thing like this. A little studying would cure this problem.

Just my views.

> drop carrier momentarily to see if you're doubling, then say your
> call sign. (I'm not so sure this works very well in practice, but
> that's what net control often wants.)

It helps some; it doesn't detect a double where you both let go at the same moment, but if you hear someone during your let-go, you can stop and try again when he's done. It's very useful for me since at only 10W Base, 5-W mobile I lose ALL doubles. (Seems to me theres a regulation about using inimal required power, has anyone noticed it's overlooked as much on 2m as on HF? :-)

I'll find out how it works under strain when I monitor the net on the linked repeaters this weekend. Key up, wait two, say hereis, drop, key up, wait two, continue. ugh. Bet it doesn't work there.

> I rarely scan,

I may scan more than most, since my current commute is a reverse commute and runs through several different traffic zones each with a "nearby" repeater, and I travel through shadow zones of each of my two favorites.

> and when I do scan I have the rig set to "stop on signal",
> so this hadn't occurred to me, but it's a good point for those who don't
> or can't.

I am, more through cheapness than other virtue, following the net.advice of the only way of having a good radio and a good scanner is having two separate rigs. (Well, I've got a good radio and a lousy but adequate scanner, but it works when I'm not right next to the police dispatch AND pager-city.) So I don't have stop-on-signal; it will stop as long as squelch is broken and +delay if I set that channel to delay (which I leave off on the repeaters whose timeout allows stepping on tails).

[pAlso, with the horrid intermod and few repeaters up here having PL out yet (and I don't have PL-decode on the antique scanner anyway), even if I did have stop-on-signal it would hit too many falsies.]

I frequently scan when driving at off-drive-time, since saying "Listening" may get me nothing on either main machine, but listening to 6 will find me someone else saying "Listening". If he gives a good long call I can hit the

light button before the squelch+delay re-scans; if he says "listening on .64" I can just QSY and kill the scanner.

> I believe this just confirms what I said about VHF procedures
> needing to be different from HF procedures.

Yup. Procedures must be adapted to the band, mode, and locale. I would be surprised if procedures on lowband CW/OOK/Morse are the same as on 10m or 20m phone too, even though all the (legit) 10m &20 mphone ops are code-tested. I gather procedures are a little different during contests too. :-)

We had some visitors from another district up here on the local repeaters over the holidays. Seems operating procedures down where he's from are different. But everyone was polite, and everyone on frequency learned something. He asked a lot of good questions too, questions I shoulda asked months ago. I hope they'd have been as polite to the visitor if he'd had an obvious "No-Code" call and hadn't been in the practice of calling everyone "Sir".

Let me suggest a slightly different consideration.

Like many people today, I lead a very busy life: long work hours, a moderate commute, the usual family obligations, etc. My HF operating is probably 95% contests. While I am not a "big gun", I do enjoy the chase and can hold my own against the typical station in the pack.

After a contest, I will receive a large number of cards from stations I apparently worked. I am always amazed at the number of stateside qsls I receive after such an event. I am in a very common county in the very common state of Colorado, where there is a good concentration of big gun contesters and DX'ers. These QSLs appear "out of the blue". There is, of course, no discussion during the contact about whether I would exchange QSLs.

Frankly, I simply do not have time in my life to deal with such unsolicited QSLs. While I understand that this is an important aspect of the hobby to many, I consider it presumptious to send unsolicited QSLs to a station contacted in the heat of a contest. And, as a busy person, I frankly do not have time to deal with such matters. I am simply unable to respond to such qsls.

I suspect there are many in my same situation. Most of the moderate to big-guns I am acquainted with probably lead similarly busy lives. Its called a "type - A" personality, which means some things just must have no priority. Responding to unsolicited qsls from a brief contest qso have no priority in my life.

I suggest those who send such qsls consider this other perspective. It is very presumptious to be upset when someone does not respond in such a case. And, it is certainly unreasonable, in my humble opinion, to even think about bashing the ham who does not have time to respond, as I do not. We all do not have the same priorities. And, we need to respect those which differ from ours. That does not, however, mean that I have time to respond to such QSLs - I do not.

During the previous weekend's NA QSO Party SSB event, I had a station ask if I would reply to a qsl card. I tactfully explained that I do not reply to qsl cards received from contest QSOs. The individual got very irritated and said "you're out of my log". Well, "if you don't want to hear the answer, don't ask the question!" I assure you that 1 contact is not going to affect my score much! Whoever the station was - and he stayed in my log, because it was a valid QSO - demonstrated a very immature attitude toward differing views of others.

It is disappointing to realize - after nearly 37 years in the hobby - how there are increasingly larger numbers of participants in the hobby that seem to have the same lack of respect for the views of others. Think about this before you get upset because someone doesn't reply to an unsolicited QSL.

A new Vocal Eliminator algorithm which allows for even more vocal elimination than LT Sound's State of the Art VE3+ will be introduced in early 1996. Persons interested in finding out more about the Thompson Vocal Eliminator(tm) are invited to visit our home page at http://www.mindspring.com/~ltsound/lthome.htm or e-mail a catalog request to ltsound@mindspring.com
The VE3+ contains State of the Art Vocal Elimination, Key Transposition, and Vocal Enhancement in one compact unit. The Thompson Vocal Eliminator(tm) allows users to remove the vocal from standard stereo recordings producing inexpensive, instantly available background music from the original standard recording. Software upgrades occur approximately every 6 months. Current owners of the VE3+ will be able to upgrade their software for a nominal charge of $25.

>The contact should be able to stand on its own merits.

Yes, this cannot be repeated often enough. But for the clubs a QSO only
exists when the "proof" in the form of a card is presented. As we know,
som "ham"s go as far as to offer substantial bribes to DXpeditions
(not to be confused with sponsoring or skeds) or actually forge cards.

I bought the Timewave DSP-9+ after seeing it demoed at Dayton. I've
been really pleased with it. Timewave also makes a higher-end model
that allows you to dial up the cutoff frequencies with higher precision,
using two rotary switches, but I think that that capability is needed
more for dedicated packet stations. Someone else may disagree.

There is one improvement I could recommend for Timewave to make, and
that has to do with changing the center frequency of the pass band in
the data mode. You have to open up the case, change a jumper, and
restart the processor. This is a problem if you do both RTTY and HF
packet sessions, because their center frequencies are different. I
solved this problem by installing a miniature toggle switch on the
front of the box, allowing me to complete the jumper connection from
there, then I also installed a reset switch (although turning the unit
off momentarily would do the job also). If you don't do HF packet,
then it's kind of a non-issue.

You can always tell which equipment is mine by the extra switches
and buttons installed on the front.

I saw the JPS units at Dayton, but they didn't have a good demo, and
it was unclear to me how you operate the units, and whether or not
multiple features could be activated at once. For example, with the
DSP-9+, if you hear CW in the middle of an SSB QSO, you push one
button, and it's gone. If there's a lot of hiss, you push a second
button, and it's gone (with some impact on intelligibility of the
speech). If you hear a second QSO on a nearby frequency (crickets),
you press a third button, and it's probably gone, along with some
high-and and low-end audio frequencies. If you still have a problem,
you push a fourth button, and the audio response curve is tightened
more. (If you just need one end of the audio frequency curve
tightened, you use the IF Shift control on the HF rig.) And if all
these stations are causing the rig's AGC to jump up and down, you push
a fifth button, and the unit activates its own AGC (improves RTTY
temendously).

It's a simple unit to operate, allows you to activate any
combination of the above features, and costs less than many other

units. I think it's a great unit.

what is wrong with a garage door opener?
Sears makes one that has 3 raised to about 10 possible combinations
(59,000 some possible combinations).
The chance of someone guessing your combination is very unlikely.

only gotchya is I'm not sure it will work out to 500 feet.

you get a nice little remote and receiver.
the receiver closes relay contacts. they are probably rated for
28 vac at an amp or 2, but hey, make the relay close another relay
close another relay...

In the US, it is illegal to encrypt any communications on the ham bands.
Is this true in other countries? Is it an international thing?

There was a post on packet over the weekend from someone outside the US
suggesting the use of PGP for encryption on packet. I suppose it would be
OK to use PGP for digital signatures, but using it for encryption is a
no-no here in the states. How about elsewhere?

1201. Launching a balloon? What do I need?

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-23 00:00:00 UTC
From: wagnerj@watt.oedison.com
Message-ID: <4e31r6$24qc@watt.oedison.com>
Source record: 231822

Our local club is interested in a couple of balloon launch scenerios.

1) We would like to put up a tethered weather balloon at Field Day. It would serve 2 purposes: It would carry a dual band radio to use as a remote base, and it would be tethered with wire, making it a beautiful 160 meter vertical. I'm interested in altitudes of between 2000 and 10000 ft.

2) A free floating balloon, carrying maybe a repeater, ATV, etc. I know this has been done by several groups in the past, so there must be some experienced folks out there.

What regulates balloons like these?

What does the FAA require me to file, and how long should I expect to wait for permission (barring any more government shutdowns)

Any other suggestions or ideas or things to watch out for?

Thanks!

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

The Solar Terrestrial Dispatch is considering conducting an extensive Internet based course designed to teach individuals with no experience how to accurately forecast radio propagation and space weather conditions using resources on the Internet and computer software. The course would cover over 150 topics (see the preliminary outline below) and would also discuss the proper use of several important software packages as aids in developing forecasts (being considered for inclusion as part of the course work).

A sample course outline follows the questionaire below. Please review it before reponding to the questionaire.

Completion of this course would probably require between 3 and 6 months with new course material provided on a weekly or biweekly basis. The course could begin as early as mid-February or early March. Between 50 and 60 students could be enrolled at one time, accepted on a first-come first-served basis (no prerequisites or previous formal education required).

Please e-mail Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu with the results of this questionaire so we can determine whether their is sufficient interest to proceed.

QUESTIONAIRE
---

1. Does this course interest you?

2. This course could be enrolled in one of four different ways:
A. Without the computer software & subscription (see outline below).
Suggested price: $150.00USD
B. With the computer software and without the subscription.
Suggested price: $200.00USD
C. Without the computer software and with the subscription.
Suggested price: $200.00USD
D. With both the computer software and the subscription.
Suggested price: $250.00USD
Which course-variant would you prefer to enroll in (A, B, C, or D)?

3. Are these price levels reasonable? If not, specify what you feel would be more appropriate prices and indicate whether you would commit to taking the course at your suggested price levels.

4. Which method of delivery would you prefer:
A. FTP-based extraction of Word-Perfect source with imbedded imagery all in compressed ZIP-type formats,

B. WWW-based extraction of course material using software such as
Netscape or Mosaic (not included as part of the course), or
C. Postal-Mail delivery of course-work on printed paper (prices could
be substantially higher with this delivery method).
Which method of delivery would you prefer (A, B, or C)?

5. Are there any other topics you would like to see covered in this
course? If so, please specify.

Thank you for taking the time to respond to this questionaire. If there
is sufficient interest, we will post another Internet bulletin giving all of
the course details and pricing, etc, together with invitations for applicants
to begin enrolling in this course.

The sample course outline follows below:

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio
propagation conditions using information available on the Internet,
through radio observations, and through studies using supplied
computer software.

Upon completion of this course, each student should be able to
formulate space-weather and radio propagation forecasts with
accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection
Impact Assessment Program
o Subscription to All STD Solar and Geophysical E-Mail
Products (including alerts and warnings) for one
year.

Total Value of the Supplied Material: over $490.00USD

The following topics and subtopics are currently scheduled to be included as
part of the course curriculum.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding Magnetic Indices
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere
- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques
- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption
Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR

x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere
- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts
- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques
- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications

* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques
- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

>I don't send them, and I don't keep the ones sent to me.

I have made it a point to ALWAYS return a QSL card sent to me. I have even gone so far as to confirm a contact made by letter (when I did not have QSL cards). I know that many hams no longer collect or care about QSL cards; however, that is no excuse for depriving a ham of a valued and needed confirmation for an award.

Treat others as you would like to be treated. Think about it before you just discard the cards you receive!

>

An ITU publication on Mobile Marine Communications or some such (I
don't have the copy at hand) has a table of Morse code, which clearly
lists CQ as a procedural sign. I cannot remember exactly what was
given as the meaning of CQ, but it was pretty much like in HAM use, I
think. So CQ is clearly part of a standard nowadays.

As I understand the table CQ is supposed to be keyed as one sign
without letter space. However, my CMOS Super Keyer III cannot store
such a long sign; instead it stores something which is mutilated....

Remember the Courier Royale???

I have one here that is available to collectors.

I remember in its day it was one of the top rigs sold in S9 mag
up there with the Browning and Tram.

I picked one up the other day. It needs some work, probably tubes.
It did not come with a mike and perhaps that is why I do not hear
anything on the receiver. I have some mikes here That I will
include with the set.

I had an offer of $25 from several people before the hollidays.
One fellow wanted it and was sending a check, then changed his
mind. If any of the others that made an offer and I refused want
it now, mail back. First $25 or highest offer will get it.

Just say you want it and I will hold it for you, and send you my
address.

One of the amateur bulletins recently played statistician
and suggested that the new codeless technicians were content
settle for their new entry class license and stay at that
level. This assumption was based on the fact that the
next "higher" class license (Tech+) only gained
a small percentage of the influx of newcomers. The conclusion
was erroneous because it ignored all those who upgraded
BEYOND Tech+. Lets look at "the rest of the story".

Below is a comparison of increases in the top three
license grades for the five-year period preceeding "no-code"
and the four-year period since "no-code".

86-91 91-95
Extra 11,711 19,734
Advanced 4,655 14,449
General 1,424 11,653
Total 17,790 45,836

(Note that these numbers are the increases for each period,
not the total number of licensees in each class.)

The surge in the "top three" since 1991 is phenomenal!
Note that the rate of increase for General was 818%
higher, Advanced was 310% higher, and Extra was 168%
higher in the four years after "no-code" than the
five years immediately prior to the new license class.

Clearly this new entry license has acted to "feed" the
higher classes of license, and considering that the
"oldest" no-code license is not yet even 5 years old,
we can expect an acceleration of this trend as they
gain experience, and the upswing in the sunspot cycle
attracts more of them to the excitement of world-wide
HF communications.

I have used my Kenwood TM241 transceiver in my SL2 for several years now,
without problems. I have taken no special precautions, in fact, I have the
power cable plugged directly into the fuse block and transmit with 50 watts.
My antenna is trunk lid mounted (by the way, the trunk is not made of plastic).

I have not heard of anyone else having such problems with the Saturn. I am glad
I purchased my SATURN and will buy another one in the future.

: Peter,
: that is a great and simple idea but *highly illegal*!

Extremely risky too! Radio has been very tightly regulated in
Germany, and a VE callsign is going to be quite remarkable on 2 metres !

: Meyer,
: you need to apply for a temporary reciprocial license at the BAPT.
: Try writing to
: BAPT
: Amateurfunkverwaltung
: Postfach 8001
: 55003 Mainz

I've had professional dealings with BAPT at Mainz, and found them
to be an excellent bunch of people, many of them amateurs.

Oh yes, they also have a fleet of about 150 vans with broadband
monitoring receivers, and a network of fixed DF'ing stations.
Spectrum management agencies in other countries closely study BAPT's
methods - they are seen to be "Market leaders"

I agree very strongly with Uli's advice. Check with your national
society to find reciprocal licence conditions applicable to your country
and your licence class, then get the right form and make the necessary
application to BAPT - you'll also need to know what proof of licence is
necessary.

What you need is for your licence to be made part of the CEPT
agreement... it makes life so much easier!

Cheers
David (designed certain monitoring receivers) GM4ZNX

Whoa, there no-coders!

The no-code folks seem to be becoming as virulent as the Extra "snobs" they condemn!

In defense of no-coders, I agree we need to go no-code across the boards if we don't want to watch ham radio wither on the vine and die.

Want evidence? We're all active CBers and on a CB group now, for cryin' out loud! What more do you need? If ham radio was the panacea, we'd be on packet or an HF net... or at least on an internet ham group! I feel bad for the exclusive CB folks whose "spectrum" we're using up!

Go CB!!!

Maybe hams could learn a little from the deregulated environment of the CB world to revitalize a dying ham radio hobby. Abolishing the CW requirement would be a good start.

Right now, you need code, though. With no-code you don't have legal access to HF bands. Several asked "Who needs HF, anyway?" Well, there is some satisfaction in backpacking miles from nowhere and using a few transistors and an IC you cobbled together with a little code key made from a coffee can and communicating halfway around the world on 15 meters with a length of copper wire tossed into the pine trees for an antenna. I can't explain it, I guess... it's just phenomonally groovy! Homebrew CW transceivers can be pretty tiny, depending on your construction skill. Perfect for the backpack or tackle box. Can't make an SSB or VHF or satellite system that's so portable and inherently cool. But you'll need to learn CW to use it.

Yup, if you want to have fun then play with low-power CW (or even a "big" commercial SSB rig if you're at home or in a camper). (Anyone got a good schematic for a tiny SSB exciter for 15 meters?)

If you're serious about direct communication and aren't interested in the fun aspect, then stick with repeaters and VHF/UHF (ick!).

If you want fun AND reliability, then turn your CB back on (good buddy)!

-- Dave

P.S. I was licensed back in the mid-70's ('76 maybe?) and have been ever since. Licensed in Japan too. Upgraded to General Class around '79-'80, but never progressed beyond General class (I only need 13

wpm? I've been doing 18 wpm with no problem!). I perceived the Advanced and Extra portions of the spectrum as too full of snobbery and the "good ol' boy" syndrome. I steadfastly refuse to sit for the Advanced (no problem) or Extra exams (well, I'd have to study for the Extra anyway...). I restate: Go CB!!!

Shortwave Dave

1216. <<<New (FREE) Ham classified Page Opens on the Web>>>

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-23 00:00:00 UTC

Message-ID: <wb6siv-2301961849220001@host12.cyberg8t.com>
Source record: 231884

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line in our classified search engine immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

I will be purging the classified listings initially, about once every month, but that timeline will shorten as our classified numbers grow.

Give it a try, and let me know how you like it (we are still beta testing)

In article <4e3kqv$2tt@usafa2.usafa.af.mil>,
DICENSODJ%DFL@pcmail.usafa.af.mil (Enough already!!! This is a CB group!)
writes:

Greetings!

I see you have been getting fed up with the latest
bickering/biting/bashing about CW versus CB. Well, I was going to post
"Why is this stuff being CROSSPOSTED?" However, I am beginning to think
it's being done on purpose, and to intimidate those that do not use, or
know, even care about, CW. Well, I do care, maybe others on the
rec.Radio.CB. just don't care or understand or are willing to listen.

If you have read back to the original version of why it was posted - the
person appologized to all - he didn't want to see a mode of communication
go by the wayside. The replies showed a lot of support and contrasting
opinions as well. I do wish to say something here, and someone finally
touched on something I wanted to speak about.

"The no-code folks seem to be becoming as virulent as the Extra "snobs"
they condemn!"

It was this that first caught me, for I too have been considering going to
Ham, however the code level creates a "Time to learn" problem in family
life - and No-code seems to have no weight when it comes to QSO's in the
lower HF bands. If I were a no-coder, I simply cannot transmit any voice
on 10 meter band unless you try to invoke a "FCC" loophole - and that
requires cooperation from the communicating parties and their
understanding. Skip propagation, which I appreciate the opportunity when
it exists on 11 Meters, makes radio more exciting and I'd like to be able
to use other frequencies when events like this occur. I wouldn't
appreciate being treated like trash - when I know I'm up against many
others with lots of experience and treat me as such without acknowledging
that I DO exist and that they understand I'm willing to learn from someone
"Elmer-ing" me versus complaining -I don't or can't- speak for myself when
I attempt to communicate.

This is to those who are bashing no-coders;

I you don't want to help, then why interfere? If I interfere with your
QSO, it is not with intention - or malice. Show consideration for those
who are trying to learn. Remember Christie [Challenger] left without even
being given a chance to demostate her abilites - Do you wish the same for
the rest of us? I think it would be a little too quiet for the FCC's
liking, and they just might "sell off" your stand-by frequency to someone
who'd make more use out of it.

Now, back to the thread you touched on;
You also discussed designing a small QRP xmtr for times of emergency. You mentioned sizes of components needed for SSB or AM on the LF bands. Unfortunately I agree, and there are serious constraints on the portability of radios that need larger coils, power levels, and bulkier components and cases in general - but this is a factor that may be worked out some day.

"Well, there is some satisfaction in backpacking miles from nowhere and using a few transistors and an IC you cobbled together with a little code key made from a coffee can and communicating halfway around the world on 15 meters with a length of copper wire tossed into the pine trees for an antenna. I can't explain it, I guess... it's just phenomonally groovy! Homebrew CW transceivers can be pretty tiny, depending on your construction skill. Perfect for the backpack or tackle box. Can't make an SSB or VHF or satellite system that's so portable and inherently cool. But you'll need to learn CW to use it."

If there was more interest, this could prossibly be eliminated. Look at what has happened in the 2m bands with the technology explosion and practicality that exists now versus just a few years ago, before no-code was initiated. If this happened for all HF/LHF bands, there could be that "little bug in Ohura's ear" - as so referenced by Gene Roddenberry in creating the Star Trek series - much of the laughter today comes from the archaic technology back then to show state of the a

I checked rec.radio.amateur.misc FAQ; no luck there, perhaps there's a
better place to check? What's the longest range wireless telephone
available without special FCC licensing (amateur radio) required for
operation?

I want a mobile telephone to carry around a small college campus.
A range of 1 km in bldgs around a base-station is probably about right.

It appears that the expected air-time would make the ordinary cell-phone
solution cost-prohibitive.

I know the 900 MHz telephones available, and I'll investigate whether
their range is adequate, but,
is there another technology I should be looking at?

Is there a clear winner or product line among 900 MHz telephones?

For a solution, I wouldn't blink at $400, and would probably be able to
spend much more than that.

I'm hoping that some kind readers can point me towards the right
product-line.
Thanks for any recommendations,
John Ruckstuhl

Hi Heinrich,

You can find HpW Works - hpwfft1.zip on compuserve or on any elrad magazine mirror in area 30.

I personally think that HpW Works is the best shareware/demo package on the internet if you are mainly interested in FFT analysis to >-100db. It works with most soundcards, 512 points in demo version, up to 1,048,576 points in licenced version. Also a number of drivers are available from the author for various professional cards like hard disk recording, etc.

It is a must to have a look at this software if you are serious about FFT analysis.

Try ftp.ix.de - magazine elrad/030/hpwfft1.zip - If I remember right.

COOL152 offers a lot of sound manipulating functions but the spectrum analysis is not very professional and inaccurate. Otherwise a nice program.

Newsline, the weekly bulletin from WA6ITF, et. al, recently made a big deal of the fact that since 1991, the Tech+ class had only grown by about 10,000 folks. Their conclusion was that this proves that only 10,000 codeless tech had upgraded their license.

Their position totally ignores the growth of the "top three" (General, Advanced, and Extra) classes during the same period. Those classes grew, not by 10,000, but by almost 46,000 since 1991. So the total upgrade traffic is not 10,000, but just under 56,000! Further, the largest "gainer" was Extra class.

The same classes grew only by 18,000 (vs 46,000) in the five years just PRIOR to the dawn of "no-code". Clearly these new folks ARE upgrading BEYOND Tech+.

Since the "oldest" no-code license is not yet even 5 years old, I think this trend can only accelerate as these newcomers gain experience and the better sunspot situation attracts them to the excitement of worldwide HF communications.

1239. QSLs & contesters [was QSL etiqutte]

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-24 00:00:00 UTC
From: cshelton@mason2.gmu.edu
Message-ID: <4e60fc$r3g@portal.gmu.edu>
Source record: 231657

After reading a post from one contestor that he never replies
to QSLs for contest QSOs, I would be curious about the habits
of other US contesters. Do you respond to QSLs for contest QSOs?
(I understand the special circumstances of DX stations, I'm
just asking about US contesters here.)

I believe that quite a few non-contesters make contest contacts
in the search for new states for WAS, etc. I had thought that
such contacts were welcome, as otherwise contesters would be
kind of limited in their contact total - there are only so
many fellow contesters to talk to, no?

BTW, I do understand that you need even us non-contest types
to know the exchange, not to try to start a ragchew, etc.

Now, the message I get from a contester who says he doesn't
QSL is "Go away, don't bother me, I just want to hear from
other serious contesters." Fair enough, if that's what you
really want.

Is this the typical viewpoint of US contesters today?
Or is it an exception?

You mean tune *up* don't you? The only two code-only subbands in all
of amateur radio are 50.0-50.1 MHz and 144.0-144.1 MHz, and guess what,
you don't need to pass a Morse test to use them.

Give a man a fish, feed him for a day, teach him to fish, feed him for
a lifetime. It's often better not to just give the answer, but rather
point the questioner to the resource where he can discover it himself.
Then he'll have a skill that will serve him the next time he has a question.

>I have to partially agree with both of the above opinions. How? I am always
>more than willing to help out a new ham, and offer any assistance I can. In

Ron Klein seems to think that his perceived lack of time is an excuse for bad manners. I trust that any QSL's he receives with an SASE are returned to the sender.

My reading seems to indicate that QSLing for any contact if requested is part of the hobby, and that contests are no exception. Do any or all of the logging programs have provision for a list of people who do not QSL, and therefore may be inappropriate to contact, or log?

I'd actually like to see a provision in contest rules that QSLing in response to a properly sent QSL is required. Properly sent means with an SASE, unfortunately.

>> 73's
>> Allan
>>KB8RZV

Let me suggest a slightly different consideration.

Like many people today, I lead a very busy life: long work hours, a moderate commute, the usual family obligations, etc. My HF operating is probably 95% contests. While I am not a "big gun", I do enjoy the chase and can hold my own against the typical station in the pack.

After a contest, I will receive a large number of cards from stations I apparently worked. I am always amazed at the number of stateside qsls I receive after such an event. I am in a very common county in the very common state of Colorado, where there is a good concentration of big gun contesters and DX'ers. These QSLs appear "out of the blue". There is, of course, no discussion during the contact about whether I would exchange QSLs.

Frankly, I simply do not have time in my life to deal with such unsolicited QSLs. While I understand that this is an important aspect of the hobby to many, I consider it presumptious to send unsolicited QSLs to a station contacted in the heat of a contest. And, as a busy person, I frankly do not have time to deal with such matters. I am simply unable to respond to such

qsls.

I suspect there are many in my same situation. Most of the moderate to big-guns I am acquainted with probably lead similarly busy lives. Its called a "type - A" personality, which means some things just must have no priority. Responding to unsolicited qsls from a brief contest qso have no priority in my life.

I suggest those who send such qsls consider this other perspective. It is very presumptious to be upset when someone does not respond in such a case. And, it is certainly unreasonable, in my humble opinion, to even think about bashing the ham who does not have time to respond, as I do not. We all do not have the same priorities. And, we need to respect those which differ from ours. That does not, however, mean that I have time to respond to such QSLs - I do not.

During the previous weekend's NA QSO Party SSB event, I had a station ask if I would reply to a qsl card. I tactfully explained that I do not reply to qsl cards received from contest QSOs. The individual got very irritated and said "you're out of my log". Well, "if you don't want to hear the answer, don't ask the question!" I assure you that 1 contact is not going to affect my score much! Whoever the station was - and he stayed in my log, because it was a valid QSO - demonstrated a very immature attitude toward differing views of others.

It is disappointing to realize - after nearly 37 years in the hobby - how there are increasingly larger numbers of participants in the hobby that seem to have the same lack of respect for the views of others. Think about this before you get upset because someone doesn't reply to an unsolicited QSL.

Don't know about that. My grandfather (KA5TTZ) was licensed back in 1984
died shortly after in 1985. Now if the 5 year or even 10 year license was in
effect why is he still in the fcc's database after all this time?

>radioTelephone Signals). Remember, I'm an analog RF cat in a digital
>room full of rocking chairs, so one-syllable words are important.

Ok, Jim, since you aren't interested in processing digital signals,
l'll refrain from referring you to

Digital Modulation and Coding by Stephen Wilson
(my favorite)

or to

Digital Communications Techniques, Signal Design and Detection
by Simon, Hinedi, and Lindsey (comprehensive)

though I would recomend them highly to anyone wanting to understand
digital signaling systems.

Instead, what you need are the following

Digital Signal Processing by Roberts and Mullis

Analog and Digital Filter Design using C by Thede

Wavelets and Subband Coding by Vetterli and Kovacevic
(this is more useful for image processing than audio, but it
is an advanced technique with application to any complex signal)

and a couple of good nuts and volts industry volumes

Digital Signal Processing Applications using the ADSP-2100 Family
vols I and II from Analog Devices (includes diskettes of practical
example code)

and

ASDP-2100 Family User's Manual also by Analog Devices.

TI and Motorola also produce applications manuals for their chipsets,
so you'll want those if that's the way you're going to go, but the
Analog Devices books are much better reads and you'll learn stuff that'll
transfer to the other processors by studying them. The $89 Analog Devices
EZkit is also a quick and easy development platform. Recomended.

Naturally there are other books, and I wouldn't mind seeing other
people's lists of favorites. Plus for speech processing you may
want some books on vocal tract modelling and prediction.

Your MOTOROLA SEMICONDUCTOR sales rep can give you a nice wall chart. It
doesn't show precise frequency boundaries, but gives a nice color display
showing generally which services occupy which spectrum. It is valid mainly
for US allocations, of course.

1251. Standard Amateur Radio Service

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-24 00:00:00 UTC
From: mark@pirates.Armstrong.EDU
Message-ID: <4e5mpt$kkj@pirates.Armstrong.EDU>
Source record: 231669

I thought the net might like to know a little about Standard Amateur Radio and the way they treat their customers after the warranty expires.

I own a Standard 5718DA dual band mobile -- you know, the one with all the controls in the microphone. I don't work for Standard; I'm just a customer like many of you.

My radio was purchased in November 1994. In December of this year, the main band display began to "blink" periodically and would not permit transmission or reception in the main band. I called Standard's Tech Support number (WARNING: The number shown for this in the latest AES catalog is incorrect; just dial the "normal" Standard number) regarding my problem since a full reset of the transceiver did not clear the problem.

I spoke with Roger at Standard. Described my problem with the radio. I expected to have to return it to a facility for an estimate of repair. Instead, Roger inquired as to the warranty status, which I explained had expired. Roger indicated my problem would be handled under warranty and told me where to send the transceiver for service.

I did so and one week later, my transceiver was returned. Well, not my transceiver but a new one from stock. All this on a radio that was easily one month beyond warranty. So while many companies COULD stick to the terms of the warranty agreement (that's all that's required) Standard exceeded what was required by a far margin.

CW still works, I'm not sure I'd say it works *well* for really weak signals though. A 5 chip modem and a HP100LX can beat it without incurring much of a size and weight penalty, and they're probably as rugged as the radio. The bigger problem is that a lot of people don't realize that yet, because of the "CW gets through when nothing else will" myth, and don't use such systems, so that limits the number of contacts you could make.

That's not a good argument for continuing to require separate Morse testing, however. Rather it is a good argument for aggressively educating amateurs about the advantages of some of the better digital encodings. When they learn that they can exchange more information, faster, and under weaker signal conditions, using relatively inexpensive equipment, more people will adopt these methods, and the problem of not finding someone on the other end to contact will decrease to near negligible levels. (I'd refer anyone to Phil Karn's web pages for examples of digital signals clearly copyable by relatively simple modems (not even DSP) while being totally inaudible to the human ear.)

(Parenthetically, digital operation has earned a poor reputation on HF because of the ghastly decisions made by early implementers. HF packet, for example, has tainted the entire spectrum of digital operations because it was so poorly conceived and implemented by early experimenters, which in itself is no sin, they were still learning, but was then *frozen* in place at that level by the availability of factory equipment implementing it. There are *much* better encodings and protocols available for the HF channel. We need to tell people about them and encourage them to abandon their current methods in favor of better methods. Then the full

potential of digital can be exploited.)

Morse isn't dead among amateurs, though it nearly is among the other radio services, but it can no longer claim superiority over other digital methods. Morse operating will likely remain for a long time among at least a subset of amateurs, either because they like it, or because they don't want to learn better ways. That's fine, but still isn't a good reason to require Morse testing at a level higher than testing for any other specialty operating mode, IE no other operating mode has its own separate test elements, and neither should Morse. It's just one of many specialty operating modes today, with no really unique advantages that compel its knowledge at certain speeds to be mandatory among amateurs in order for them to access spectrum where better methods can be used.

I don't think Morse is useless, and it certainly isn't dead among amateurs, but I don't think it is any longer of such great value as to require the attention and effort directed toward it that current regulations require. It is just another specialty tool we might like to have in our toolbox of skills for situations where the ultimate in weak signal performance isn't required but where ordinary analog voice isn't quite up to the job. We might equally chose to use 10 db of antenna or amplifier gain to solve the 3 watt problem above for analog SSB voice, or we might choose a better digital code and *reduce* power another 6 to 10 db instead. Choosing to use Morse is only one of several options, and generally no longer the best option open to us.

Boy am I ever dissapointed!!! My eyes lit up when I read this message this morning. I thought to myself "No more searching around for a clear frequency to do the old dahdidaaaahdit dahdaaaahdidah thing!" With Morse dead, the CW subbands should finally be quiet. Well was I in for a shock when I got home this evening. I turned on my wireless set and heard all this beep beep stuff. There must have been hundreds maybe thousands of 'em... beeping away at each other. I tried other bands and heard even more beep beeps. I tell ya, it was so bad you couldn't even get a dit in edgewise! What is it with these guys and their incessant beeping? What year do they think this is? 1901 or something? There are now much BETTER ways of doing it! Why strain your ears picking a callsign from a pileup or interference when DSP and a PC can do a much better job. Get modern -- let a computer do the work so you can spend your doing something more enjoyable!

What?? You heard ME on CW last night? Ahhh errr... must have been someone who SOUNDED like me!!

Or better yet, tune around in the Novice subband on 80 (3675 - 3725) during the evening. It's hard to find a clear spot to call CQ. You'll hear lots of folks investing the effort to get more proficient at their craft.

Followups directed to rec.radio.amateur.policy (which these days is more whining ..... errrr noise to signal these days).

I tend to agree with Ron. Most people are busy enough today with things unrelated to ham radio and other hobbies. Out of 172 members in our club, it is rare to see more than 40 at most meetings. Many remain members, but I have never met them, and I'm at almost every club event and RACES session.

: My reading seems to indicate that QSLing for any contact if requested
: is part of the hobby, and that contests are no exception. Do any or
: all of the logging programs have provision for a list of people who do
: not QSL, and therefore may be inappropriate to contact, or log?

Unless things have changed over the last 25 or so years, I thought that QSL etiquette required that the request for a confirmation be made during the contact. I've done this before, only to be told by the other operator that he doesn't send QSL cards. No problem, no hard feelings, no waiting for a card that will never arrive, no badgering the other guy with repeated requests, etc.

: I'd actually like to see a provision in contest rules that QSLing in
: response to a properly sent QSL is required. Properly sent means with
: an SASE, unfortunately.

I'd have to disagree. How would you propose that the contest authorities regulate this, anyway?

I can't say that I blame hams for treating unsolicited QSL cards like all the rest of the unsolicited mail we get every day.

Hi there old brass pounder,

There has been a large ammount of traffic on packet with reference
to the new Atlas Radio almost exclusively negative. They are said
to have taken a lot of money and have yet to deliver a radio. Get a
used TS-50 and crank it up to 200 watts or get one of the new Alincos
they are under $1000 new.

>is no disputing that. The no-code license may be able to save it,
>unless the license snobs frighten away all the newbies.

Well another statistical aberration in the counting
is due to the fact that the FCC
had extended license renewals to a 10 year period
(the original se life being a five year license). That
created a 5 year window when absolutely no licenses were
expiring. During that period, it is fairly safe to say that some
numbers of hams with licenses above tech were, in fact,
becoming silent keys or otherwise left the hobby and, if still
alive today are not likely to renew their higher level license
anyway.

What that means is that the numbers of hams in the
general, advanced and extra classes is probably
overstated...while the number of newer techs is probably
a more accurate figure as those tech (no-code techs)
are all recently licensed.

The 5 year window only recently ended and we will now
see a puging of hams over time from the FCC list for
the reasons mentioned above.

Keep The Code.

Cw is like the spare tire in the trunk of your car. You may never use it, but when you do need it, it sure comes in handy. I have made a lot of DX contacts on CW that I would not have been able to make on phone. Not because of weak signals, but because the station I contacted did not speak English and I did not speak their language. We both knew CW though, and every CW prosign and Q signal was clearly understood by each of us.

The main reason to keep the code is for a situation that I hope never happens, but it could happen. And that reason is a complete National disaster. We have never had a disaster that has affected the entire country at once. WE have had hurricanes here, earthquakes there, and some flooding all around, but never a nation wide emergency. A Nuclear war is one emergency that would affect the whole country. And in a Nuclear war, sensitive electronic circuits as found in our radio's and computers would be Zapped, making that equipment useless. Now the key to restoring order after a disaster is communications. And as a Ham, you have agreed to help out. (see part 97) Now you have to find a radio that survived the disaster, perhaps you will have to build one. The simpliest transmitter to build is one that sends a CW signal, only need a few parts to do it. You can use a wire for an antenna. It really wouldn't do any good to build a Cw transmitter though, if you didn't know the code.
Now, it is possible that we will never have a nuclear war, things look great in Russia right now {hi}. And if we do have a nuclear war it is possible a few radios will survive and you won't need to build one {hi}. And we all know that with so many hams off the air, the packet & RTTY networks are going to be less crowded and working just fine {hi}.

I guess you're right, we don't need code {hi}.

Source record: 231677

I just read an editorial in CQ about how we are facing a situation that hams faced during the early part of this century. It was that hams were given the (unusable) band spectrum of 2 MHz and above.

Back then, no one thought they could resonate anything at 2 million cycles per second, not in a way that anyone would care.

Right now, they say "100 GHz? It's unusable!"

Back then, they said (well, whatever they said, it made 3-30 MHz considered 'High Frequency').

The US government gave hams 2 MHz and everything above, because it was something that no one knew how to use. Now look at it.

We have been given "50 GHz and above". It's almost a taunt. I have no idea how to use this during the next 50 years. I hope I live long enough to say at least that I was looking toward the future.

WICEN News

There are now many more events upon the WICEN calendar, and we would like to be notified of ALL events, whether local or not; not only does it provide good publicity value, but there is also the small matter of VRA insurance should an accident occur...

The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is on 25th February, and since we will not have the caravan this time, then your ideas are requested; please let the Publicity Officer, Dave VK2KFU, know whether you can assist.

The famous Bungonia Cave Rescue event rears its head again, over the weekend of 16-17th March, and Mark VK2XGK would like to hear from those wishing to demonstrate their communications skills, under somewhat difficult circumstances. The potential for publicity here, before various emergency services and the public, should not be overlooked. On the same weekend, on 17th March, is the Red Cross Calling Doorknock Appeal, with Andy VK2XRX in charge, and he requires around twenty people.

Finally, there are the two big annual events; the City to Surf Fun Run is on 11th August, and the Hawkesbury Classic Paddle, once more missing JOTA which is the weekend before, is on 26-27th October.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://sydney.dialix.oz.au/~wiansw/wicen/"; your comments are invited.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

HF propagation tests

HF propagation tests

The following is an extract from an email message sent to me by Neville Palmer, G4GCI. Neville is a lecturer at the Southhampton Institute of technology in England and his department there is interested in trying some propagation experiments on the lower HF bands. The tests they are currently trying are operated from the college station, callsign GX3UVC.

"We are taking advantage of the low sunspot count at the moment and doing a little propagation research on 160 - 40 meters. Ww would parti-cularly like to contact VK and ZL stations to prove some of the theory. We have actually been monitoring three ABC transmitters at Alice Springs, tennant Creek, and Katherine on 2310, 2325 and 2485 kHz because they are close to 160 meters. Surprisingly we can hear these

stations every evening over here. We can hear the carrier of these stations quite reliably from before 1530 GMT (up to an hour before our sunset), to 2130 GMT (up to an hour after VK8 sunrise). Incidentally they swap to 4835, 4910, and 5025 kHz at 2130z, and we can still hear these up to 2150z. Often the modulation is audible at some time during most evenings. Their TX power is 50 kW, so in order for us to QSO with VK8 using 100 watts we need good conditions, however these stations enable more reliable predictions to be made. We have been clling CQ DX from 1800 to 1830 GMT on at least Mondays and Fridays on 1828 and 3505 kHz CW. Any QSOs or SWL reports would be welcome."

If any VK/ZL stations are interested in helping Neville and his students, he can be contacted on email at the following addresses:
palmer_n@southampton-institute.ac.uk
100116.370@compuserve.com
or by packet radio to GX3UVC@GB7XJZ.#48.GBR.EU

Wyong Field Day

THE 1996 CENTRAL COAST FIELD DAY AT WYONG RACECOURSE
==========
Sunday 15th (sic - 25th!) February, 1996

The CENTRAL COAST FIELD DAY is one of the longest running events in the Australian amateur radio calendar. The next Central Coast Field Day will be held on Sunday, 25th February, 1996 at Wyong Racecourse and this will be the 39th year of this popular and growing event.

As usual the large contingent of well-known suppliers of electronic equipment, components and books will be attending. These companies will have their latest products on display and many traders will have items on sale at very special Field Day prices. Last year the popular "Flea Market" attracted a large number of people who traded an enormous amount of surplus electronic equipment from trestles, their trailers or from the boot of their car. The organisers expect the flea market to boom with even more vendors than last year.

The organisers, the Central Coast Amateur Radio Club Inc. have kept the format for the Field Day in line with the changing face of amateur radio. In recent years seminars on a wide range of topical subjects ranging from packet radio to satellite communications have been a popular attraction. This year an even bigger program of interesting lectures and equipment displays has been arranged. Some attractions however have remained unchanged and ever popular, among these is the so called disposals sale of many thousands of new and used equipment ... many bargains going upfor grabs. Trading and all programmed activites will commence at 8.30 am.

ADMISSION ... Adults $10.00 ... Children under 12 Free ... Seniors card $5.00 ... Pensioner $5.00. A special group concession will also be available on application.

FIELD DAY ATTRACTIONS INCLUDE ...
* ALARA stand * Flea Market
* Disposals * Various Amateur Television Groups
* WIA Historian Stand * Packet Radio displays
* QSL Bureau * Fox hunts
* Seminars, techical lectures * Complimentary Bus Tour Tickets and Workshops * Reptile Park Visit
* VK2 Education Stand * Satellite Television Receiving
* Trade Displays and Sales Demonstration
* WICEN Display * Operating HF station

SEMINARS AND WORKSHOPS ... Several sessions throughout the day on topical subjects. Included will be talks on specialised topics and presentations by equipment suppliers.
A FIELD DAY INFORMATION SERVICE will be provided on the Gosford 2 metre repeater (6726) on Saturday afternoon and Sunday morning using the callsign VK2AFV/P.
TRAINS ... Sydney and Newcastle trains operate frequent services to Wyong station.
WYONG RACECOURSE is a short 5 minute walk from Wyong Railway Station.
PARKING ... Plenty of off street parking is available within Wyong Racecourse grounds.
ACCOMMODATION ... Accommodation is scarce on the Central Coast at Field Day time, and early booking is advised.
CATERING ... Tea, coffee and biscuits will be available from 8.30 am to 3.00 pm at no charge in the Dining Room. Takeaway food can be also purchased with Wyong Racecourse.
CALLS PRESENT ... Bring your QSL cards for the "CALLS PRESENT" boards.
EXHIBITORS ... Companies, persons, groups or clubs wishing to set up a traders table or display at the Field Day should contact the Field Day Committee at PO Box 732, WYONG 2259 before 31st January, 1996.
DISPOSALS ... Disposals lots for the 1996 Field Day will be limited to a minimum lot value of $20. Vendors who wish to sell items od small value are encouraged to sell via the flea market. Forms for Disposals and lot numbers may be obtained in advance by sending a stamped self-addressed business size envelope to - The Field Day Committee, PO Box 732, Wyong, 2259. Items for disposals may be booked in on Sunday, 25th February between 8.30 am and 10.30 am. Please note that 10.30 am is the cut-off time for booking-in of disposals and late arrivals cannot be accepted. Improperly tagged or catalogued items WILL be refused.
FLEA MARKET ... For those who wish to bypass disposals and sell their own equipment, trestles will be available nd open boot or tailgate sales may be conducted in the Flea Market. Setting up will be available from 8.30 am. Charges are $15 to set up and an

additional $15 per trestle if required.
INFORMATION ... On the Wyong Racecourse venue, group Concessions, Trade Displays, Flea Market, Disposals, Programs or any other Field Day information can be obtained by writing to ...
The Field Day Committee
PO Box 732
Wyong NSW 2259
Phone (043) 40 2500
Packet VK2AFY@VK2EHQ

More than two thousand people attended last year's Central Coast Field Day. The next on at Wyong Racecourse will be bigger than ever, so mark 25th February, 1996 down in your calendar to go to the Central Coast Fiel;d Day at Wyong Racecourse. Gates will open at 8.30 am in wet or fine weather and all displays are under cover.

News Briefs

NEWS BRIEFS

Technology is coming to the aid of one of the world's endangered species, the Southern Right Whale. Mr. Bruce Cooper, a researcher at the University of Western Australia's Centre for Intelligent Information Processing Systems, has developed the first fully automatic whale identification system.

Until now, individual whales have been identified by the callosites, the pattern of white spots on the head of the whales. The pattern of callosites is unique to each whale, just like a fingerprint to humans. In the past, researchers had to labour over aerial photographs of the whales, a task made more difficult by foam patterns in the water, made when the whales breach the surface.

Mr. Cooper has used a processed called "Gaussian mixture modelling" combined with an "artificial neural network - a sophisticated computer reasoning system" to automatically identify the whales from the photographs taken by spotter planes.

The technique will make it easier to monitor the Southern Right Whale population, and observe its migratory patterns.

South Africa and Argentina also conduct research into the Southern Right Whale.

According to the Australian, Mr. Cooper is modifying his system to read hand-written Japanese characters...

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(12 JANUARY - 18 JANUARY)

ISSUED 19 JANUARY

SUMMARY

Date 12 13 14 15 16 17 18
10cm 70 69 70 70 70 70 71
A 10 28 24 15 8 12 (9 estimated)
T 18 53 -22 -36 -19 -19 22

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED 12TH, AND 16TH TO 18TH JANUARY. THE FIELD WAS AT QUIET TO MINOR STORM LEVELS ON BOTH 13TH AND 15TH, AND QUIET TO ACTIVE ON 14TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES ON 12TH JANIARY; ENHANCED BY 50 PER CENT AT TIMES ON 13TH, BECOMING DEPRESSED 15 TO 20 PER CENT MOST OF THE DAY THROUGH 15TH. THERE WAS NO DATA AVAILABLE AT SYDNEY ON 16TH WITH BOTH TOWNSVILLE AND HOBART DEPRESSED 15 PER CENT ON THE DAY. fREQUENCIES WERE NEAR PREDICTED VALUES 17TH AND 18TH. SPREAD F WAS REPORTED ON 15TH AND 18TH; REGULAR SPORADIC E ON 17TH, WITH REGULAR DAYLIGHT BLANKETING OF THE F LAYER.

FORECAST (12 JANUARY - 18 JANUARY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO MINOR STORM 20 JANUARY, AND OTHERWISE QUIET TO UNSETTLED.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES. DEGRADED CONDITIONS EXPECTED 20-21 JANUARY, IN ASSOCIATION WITH FORECAST GEOMAGNETIC ACTIVITY.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Fishers Ghost

The Fisher's Ghost Amateur Radio Club would like to remind all members that their AGM is to be held on the 20th February ... we'd love to see as many members as possible.

Fees are now due, and you must be financial to be able to cast your vote.

The Campbelltown Hobbyfest Expo will be held on the weekend of the 3rd of March ... come and meet some of the Fishers Ghost members, and while you're there have a good look around at the other hobbies and crafts ... a good family day out. We also need some members to help with the display ... if you can help for a few hours, ring Ted VK2JAU on 046 254959.

The club also holds classes on Wednesday nights at 7.00 pm for those wishing to gain a radio operators licence.

On each Tuesday night the club also has other events.

The first Tuesday of the month is the Committee meeting ... the second Tuesday of the month is the project building night where you can be helped with the project you may be having problems with ... the third Tuesday of the month is the general meeting, and a general get together and ragchew ... with an informative lecture being given at times ... the fourth Tuesday is the packet group meeting with lots of help available and interesting information and lecturesd for the beginner to the expert ...

All members and visitors are welcome to come along to any of these functions ... at the Campbelltown High School starting at 7.30 pm ... Beverley Road Campbelltown.

Look for the yellow painted classrooms on the southern end of the school grounds.

Aslo on Friday night there is the 80 meter net on 3.580 MHz starting at 8.00 pm, and on Sunday nights a 10 meter net on 28.520 MHz also at 8.00 pm.

Jim Zenner VK2LJZ
Club Secretary

Dave,
Try giving ICOM a e-mail shout at the following address's:
http://www.icomamerica.com (or) 75540.525@compuserve.com (or) ICOM Technical support in the HamNet forum on CompuServe @ 75540.525

Maybe they can direct to service in your area.
Hope this helps you

1280. Re:QSLs & contesters [was QSL etiquette]

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-25 00:00:00 UTC
From: David.Bourque@analog.COM
Message-ID: <199601251324.AA15592@adinet.analog.com>
Source record: 231691

This contest station operator also has a Type A personality but I also confirm EVERY card sent to me. I do however sort them into two piles for processing. If it has an SASE it usually goes back out the next day. If no SASE, I prepare the return card but then it waits until I get to the post office for post card stamps. Usually around bill paying time at the first of the month. Why do I confirm every card sent to me. I'll tell you why. As a novice in the mid 70's from the tenth call district I managed to work all 50 states. I was working for my WAS. I was able to confirm 49 states. In that last state, which I won't mention but after all these years I still remember, I had worked not one but two stations. Do you think I could confirm that last state even with SASE's. No. QSL etiquette I guess didn't exist or was it that type A personality bullshit? Shortly after upgrading and moving to another call district I no longer have the opportunity to chase that last state from where I confirmed 49 states. New QTH and new call, I needed to start over again. Because of my busy schedule I no longer chase awards like WAS but others may so I make sure I confirm EVERY card sent to me. I don't want to be somebody 50th state that won't confirm. Something about do unto others.... I'm just as busy as the next guy but it only takes a few minutes (if your records are organized) to confirm and fill out cards and send them back. Sorry, I don't buy the "I'm too busy" crap.

From: "Gary P. Fiber" <gfiber@halcyon.com>
Message-ID: <4e814e$ev@news.halcyon.com>
Source record: 231695

I would suggest sending the radio to one of our service centers, along with a letter explaining the difficulties you are experiencing with the radio. You may send your radio to one of our service centers at the following addresses:

ICOM America, Inc. ICOM America, Inc.
2380 116th Ave. N.E. 18102 Sky Park South No. 52-B
Bellevue, WA 98004 Irvine, CA 92714
Attn: Service Department Attn: Service Department

Tel:(206) 454-8155 Tel:(714) 852-8026

At this time, I am unable to give you a quote on what the charges will be to repair your radio. We can give you a quote once we receive the radio and a technician can evaluate the extent of the repairs. For a guideline, our repair charges are calculated at the rate of $65.00 per hour with a minimum of (1) one hour of labor, plus parts and return shipping.

We do charge a fee of $25.00 for refused estimates or for out of warranty radios that have no problem found when presented for repair.

Shipping charges will depend on the method of shipment. We accept Master Card, Visa, M.O. and UPS C.O.D. for payment of parts orders. Please contact me if I can be of further assistance.

Best regards,
Gary KF7XV

>1991. So the total upgrade traffic is not 10,000, but just
>under 56,000! Further, the largest "gainer" was Extra class.

I agree! I think there is an attitude that people assume that a no-code tech is automatically going to up-grade to tech plus. Last year when I was in a VE session to up-grade my license, there were two no-coders who jumped past tech plus. They both passed their 13 wpm code test, one passed General written and one went all the way to Advanced!

Garys' statement is correct. Those two segments are the
only two which the FCC has reserved solely for CW. While
there certainly are band plans by which we "organize"
our use of the bands, these have no official sanction
at FCC. You can legally, so long as you don't maliciously
interfere, use CW anywhere in the ham bands. (Not very
smart maybe, but not illegal.)

Actually, it means mixing a modulated signal with a local oscillator at the same frequency. It's an old term for direct conversion (a very common configuration for simple receivers these days), just as autodyne is an old term for regeneration.

Check your telephone book for a retail outlet that markets amateur radio equipment. Once you find them, call and ask about local clubs, there's sure to be one in your area. Alternatively, write the ARRL - they can direct you to the nearest ham who can assist you in becoming a ham. Good Luck!

It's much harder to make a rec group than it is to make an alt group.
Maybe alt.radio.amateur.binaries??

As for it being used, I don't know. Realize that because it is a
.binaries group there are sight that won't carry it or will give it
short expiration times.

1303. QSLs & contesters

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-25 00:00:00 UTC
From: artburke@solar.sky.net
Message-ID: <4e8n58$67p@alpha.sky.net>
Source record: 231714

Speaking as a semi-serious county hunter/contester/DXer (mostly from when I didn't live in yuppieville!), I found out years ago how to handle the types who don't QSL. Get yourself a reasonable supply of postcards, have a rubber stamp made up with whatever your requirements are, etc. At the bottom of the postcard (obviously on the same side with all the QSO information, etc.) put a "signature line" for the operator to sign. Address the postcard to yourself (pre-affixed with appropriate postage, of course) and mail it to the guy (or YL, whatever). All the other station has to do is verify the info (if they so desire), sign it, and stick it back in the mail at their convenience.

When I was seriously hunting counties (there are over 3,000 of them!) and prefixes for CQ magazine's WPX awards, I used this technique with astounding success. I would be hard pressed to identify more than a half dozen operators in a ten year stretch who did no return my card. Many hams not only returned the hand-made card, they also sent me one of their own cards!

The only QSL problem I can't figure out how to handle is the one I expect to be in myself in a few years. I intend to retire into an RV and live pretty much "on the road" until we (my wife and I) can't do it anymore. I certainly can't conceive how I'm going to have cards chasing me around the country! Uh-oh, a not-so-novel idea just popped up. How many domestic stations have QSL managers? :-)

1304. Re: qsl etiquette (see Feb 1996 QST)

Newsgroup: rec.radio.amateur.misc
Date: 1996-01-25 00:00:00 UTC
From: Hans Brakob K0HB <71111.260@CompuServe.COM>
Message-ID: <4e6pal$74i$1@mhafn.production.compuserve.com>
Source record: 231715

After a lot of years in the hobby, I really don't need
another QSL card from Michigan or Germany or Japan or
Moscow.
But I sure can remember when I really DID need those cards,
and I assume that whoever spent 32-cents to solicit a card
from me needs mine just as bad as I needed someone elses
"way back then".
So everyone who sends me a card (for a valid contact) gets
a return card. If it comes with an SASE (or SAE and IRC) the
response goes out tomorrow. If it comes via the "buro" it
goes out with my next shipment to Newington. If it comes
"bare" with no return postage it goes out "next time I've
got a spare stamp". But they ALL do get answered.
Between contesting, DXing, and casual operation I average
perhaps 7,000 contacts per year. I get perhaps 300 unsolicited
QSL's per year, roughly 25% of which come "bare" requiring me
to affix a 20-cent stamp. Figures out to $15.00 per year in
expense, and just a few scattered minutes of my time. Not a
big deal, and I'm glad to do it.
But for the fellow who suggested a QSL should be REQUIRED
or the contact doesn't count -- sorry, but I'm ornery and
independent enough so that would be the day I quit QSLing
completely. (It's a hobby, not a religion!)

ARLD006 BS7 start date

Today the DXCC Desk announced that the start date for Scarborough
Reef is January 1, 1995. Only QSOs made on, or after, that date
will be eligible for DXCC credit.

The first accredited operation took place in April of 1995. The 1994
DXpedition did not qualify as a ''land based operation.''

As previously announced, QSL cards will be received by the DXCC Desk
starting April 1, 1996. Cards received before that date will be
returned without action.
